

[HSE to prosecute Alexandra Homes Bristol Limited](#)

A Health and Safety Executive (HSE) prosecution is being brought against Alexandra Homes (Bristol) Limited. This follows the death of 18-year-old Melissa Mathieson after she was discovered unconscious at the Alexandra House care home, Knowle, Bristol on 12 October 2014.

Alexandra Homes (Bristol) Limited, of Wells Road, Knowle, Bristol will face charges under Sections 2(1) and 3(1) Health and Safety at Work etc. Act 1974. Yvonne Hin, a former care home manager of Avenue Road, Ilfracombe will also face a charge under Section 37 of the Health and Safety at Work etc. Act 1974.

The charges follow a complex and sensitive enquiry, initially led by the Police.

The first hearing is due to take place on 5 October 2022 at Bristol Magistrates' Court.

[Company fined after employee becomes drawn into a machine](#)

A manufacturer of paper and paperboard has been fined after an employee was injured when they were drawn into a large paper re-winding machine.

On 19 July 2021 a male employee of Amberset Limited based in Ashford, Kent, sustained injuries of three broken bones in their shoulder, bruising of the elbow and wrist and superficial damage to their head. The man then underwent surgery following the incident, where metal plates and pins were fitted in his shoulder and arm.

An investigation by the Health and Safety Executive (HSE) found that the paper rewinder was not suitably guarded and this had been the case since August 1998. The rewinder allowed access to dangerous parts of machinery at various places including the front of the rewinder where the employee was

drawn by their hand between two exposed rollers.

At Folkestone Magistrates Court on 21 September Amberset Limited pleaded guilty to breaching regulation 11(1)(a) of the Provision and Use of Work Equipment Regulations 1998. The company was fined £2,000 and ordered to pay full costs of £2,197.65.

After the hearing, HSE inspector Peter Bruce said: “Employers should regularly review the safety measures on their plant and equipment to ensure that access to dangerous parts is prevented. The guidance on safe operation of paper rewinders is well established as is the law and guidance on guarding dangerous parts of machinery.

“Employees should be prevented from getting into a position where they can come into contact with dangerous parts of machinery.

“It is fortunate that the quick action of the employee’s colleagues in stopping the machine, ensured that they were not pulled further into the machine as their injuries could have been much worse if not fatal.”

Engineering company hit with fine after man installing bird deterrent spikes fell from roof

An engineering company has been fined after one of its employees fell through a roof while installing bird deterrent spikes.

On 13 May 2020, a man working for Craven and Nicholas (Engineering) Ltd on St John's Road in Boston, stepped onto a fragile roof surface and fell six metres through it – suffering serious injuries to his head and left arm.

An investigation by the Health and Safety Executive (HSE) found that this task was not part of the normal work for employees of the company and they had not properly risk assessed and planned the work at height.

The lack of planning meant that reasonably practicable and recognised control measures that could have prevented the man falling from height, such as the use of purpose designed access equipment and over-boarding of fragile roof surfaces, had not been implemented.

At Lincoln Magistrates Court on Wednesday 21 September, Craven and Nicholas (Engineering) Ltd of St Johns Road in Boston pleaded guilty to breaching Regulations 4(1)(a) and 4(1)(c) of the Work at Height Regulations 2005. They were fined £14,000 and also ordered to pay £6,541.80 in costs.

Speaking after the hearing, HSE inspector Tim Nicholson said: "Where work at height cannot be avoided, it should be properly planned, adequately supervised and carried out in a safe manner using appropriate equipment.

"Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards.

"There is a significant amount of guidance available to help companies protect employees when working at height on the HSE website."

[Manufacturing company fined after worker injured by machinery](#)

A manufacturing company has been fined £20,000 after a worker's hand was partially severed when it was caught in machinery.

The employee of ADA Machining Services Ltd, Ashton-under-Lyne, was operating a Richards 16ft vertical boring machine on 24 March 2021 when he stepped on to the rotating table to check the internal boring cut but slipped and fell on the table.

On his third attempt to steady himself after slipping, his hand was drawn into the in-running nip, and he suffered a partially severed hand. He remains unable to work.

An investigation by the Health and Safety Executive (HSE) found that there was inadequate guarding to prevent access to dangerous parts of the machinery and an inadequate risk assessment for operating the vertical boring machine.

The investigation found that it was also custom and practice to walk on the rotating machine table during operation of the vertical boring machine.

ADA Machining Services Ltd, of Richmond Street, Ashton-under-Lyne, pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc. Act 1974 and was fined £20,000 with £4,952 costs at Manchester Magistrates' Court on September 20 2022.

The company, which is a sub-contractor in the machining sector specialising in heavy components, had previously pleaded guilty of breaching the Provision and Use of Work Equipment Regulation 11(1) on 12 May 2010 for an entrapment accident on a vertical boring machine.

HSE provided guidance on guarding these machines at that time so the company had been aware of the risks for a number of years and should have taken remedial action to prevent a second accident of the same nature happening again.

HSE inspector Lorna Sherlock said after the case: "This injury was easily prevented, and the risk should have been identified and eliminated when the company were given advice on guarding this machine by HSE 11 years ago.

"Employers should make sure they properly assess and apply effective control measures to minimise the risk from dangerous parts of machinery."

[Death of Marius Badiou – An Update from HSE](#)

The investigation into the death of a slinger signaller has been handed over to the Health and Safety Executive (HSE).

Marius Badiou died on 21 July 2022 during a lifting operation at the Gatwick Railway Redevelopment Project at Gatwick Airport.

A joint investigation was launched with and led by the British Transport Police. The police have concluded their investigations and HSE will now lead the investigation.

The investigation will determine if any breaches under the Health and Safety at Work Act have occurred.

HSE principal inspector Ross Carter said: "It is important HSE completes the investigation into Marius's death to determine the cause of this incident.

"HSE will draw upon the evidence gathered so far and call upon its own specialist investigators and independent support in what is likely to be a complex investigation.

"During the investigation we will continue to keep in touch with Marius's family as we send them our deepest sympathies at this difficult time."
