

Health risk category for Air Quality Health Index may reach Serious Level

The Environmental Protection Department (EPD) has recorded higher than normal air pollution levels since yesterday (August 8). According to the EPD's forecast, it is expected that the AQHI at some general and roadside air monitoring stations may reach the "Serious" level later today (August 9), and that the AQHI may also remain higher than normal tomorrow (August 10).

As continuously influenced by the outer subsiding air of Super Typhoon Lekima, the weather in Hong Kong today is fine, very hot with haze during the day, with west force 3 to 4. Higher than normal levels of ozone and particulates have been recorded in the territory since this morning. Hong Kong is being affected by an air mass with higher background pollutant concentrations. The sunshine enhances photochemical smog activity and the rapid formation of ozone and fine particulates in the Pearl River Delta region. The high level of ozone has promoted the formation of nitrogen dioxide, particularly in parts of the urban areas and at the roadside.

According to the Hong Kong Observatory, a southwesterly airstream is expected to bring showers to the south China coast early to middle next week. It is expected that pollution levels will be improved by then.

With a health risk category in the "Very High" range or above, children, the elderly and persons with existing heart or respiratory illnesses are advised to reduce physical exertion and outdoor activities to a minimum or avoid such activities. The general public is advised to reduce, or reduce to a minimum, outdoor physical exertion, and to reduce time staying outdoors, especially in areas with heavy traffic. As health effects of air pollutants may vary for individuals, persons who are in doubt or experience discomfort should seek advice from health-care professionals. The public may visit the Centre for Health Protection's website (www.chp.gov.hk/en/content/9/460/3557.html) for more information on the health effects of air pollution and relevant health advice.

The Education Bureau (EDB) urges all schools to visit the EDB's website for appropriate measures to safeguard students' health and take note of changes in the index. The relevant hyperlink is as follows: www.edb.gov.hk/en/sch-admin/admin/about-activities/sch-activities-guidelines/index.html.

When the AQHI is at the "Very High" level, employers of outdoor workers performing heavy manual work are advised to assess the risk of outdoor work and take appropriate preventive measures to protect the health of their employees such as reducing outdoor physical exertion and the time of their stay outdoors, especially in areas with heavy traffic. At the "Serious" level, employers of all outdoor workers are advised to assess the risk of outdoor work and take appropriate preventive measures to protect the health of their employees.

Members of the public can check the current AQHI readings at the EPD's website (www.aqi.gov.hk/en.html) or call the hotline 2827 8541.
