

Homeowners to see savings available under new Green Homes Grant scheme

- Homeowners and landlords given head start in making the most of the new Green Homes Grant scheme
- website offers personalised energy plan, and access to trusted local tradespeople to carry out the work
- scheme is part of the government's plans to build back greener, with more than 600,000 new homes set to become more energy efficient and more than 100,000 skilled jobs supported

Homeowners and landlords can from today (Friday 28 August) see for themselves how the government's new Green Homes Grant scheme can help make their homes warmer and more energy efficient.

Business and Energy Secretary Alok Sharma today unveiled a new opportunity for consumers to get tips for making their homes more energy efficient, and details of how the Green Homes Grant scheme can make installations cheaper. These will be available on a revamped [Simple Energy Advice website](#).

The site offers a quick energy survey for consumers to see how energy efficient their homes already are, and where improvements can be made. Taking as little as 5 minutes, once completed homeowners and landlords can receive a personalised energy plan.

The Green Home Grants scheme, due to open by the end of September, will allow consumers to obtain funding for up to two-thirds of the cost of the energy saving measures identified – up to £5000 – in the form of new vouchers. Lower income households could be entitled to have as much as £10,000 of the costs covered.

The scheme will cover green home improvements including insulation of walls, floors and roofs, the installation of double or triple glazing when replacing single glazing, and low-carbon heating. These measures could help families save up to £600 a year on their energy bills.

The [Simple Energy Advice website](#) then offers people access to fully accredited tradespeople in their area able to carry out the work needed, so they can get quotes ready for when the vouchers become available.

Business and Energy Secretary, Alok Sharma, said:

Green Homes Grants are a key part of our plans to build back greener, helping make 600,000 homes more energy efficient with government vouchers, while supporting 100,000 skilled jobs and supporting our transition to net zero carbon emissions by 2050.

From today people will have the chance to see how this scheme could

help save money on their energy bills and connect to trusted local tradespeople across the country, so they are ready for the scheme's launch in September.

Announced in August, the Green Homes Grant scheme will see the government fund up to two-thirds of the cost of home improvements up to £10,000 to make over 600,000 homes across the country more energy efficient and support over 100,000 jobs in green construction.

Energy Savings Trust Chief Executive, Mike Thornton, said:

The Green Homes Grant scheme is a great opportunity to get a grant to cut energy bills. Now the website is live, we urge people to go online to create a personalised plan for energy efficiency in their home as a first step to getting their grant.

View the [Simple Energy Advice website](#).

Anyone wishing to be accredited to complete work under the Green Homes Grant scheme can simply register with [TrustMark](#) via their website, with registration taking as few as 5 working days for those who already have membership of a recognised trade body such as the Federation of Master Builders, the Cavity Insulation Guarantee Agency and Building Engineering Services Association, or who are already certified under the [Microgeneration Certification Scheme](#).

Installers must meet Publicly Available Specification Standards to install energy efficiency measures. All work under the Green Homes Grant scheme must be completed to PAS 2030:2017, however if an installer has already transitioned to PAS 2030:2019 they can work to this standard instead.

Installers must meet the relevant Microgeneration Certification Scheme (MCS) to install low carbon heat measures.
