

ICF Brazil

ICF looks to enable and accelerate the implementation of the Nationally Determined Contributions (NDCs) by:

- catalysing and mobilizing strategic private sector investments in sustainable low carbon projects on forests, agriculture and infrastructure

and;

- encouraging technological progress, ensuring that these activities can continue to develop while preserving natural resources, reducing deforestation and reducing GHG emissions.
- Support Brazil to create lower carbon economies, meeting energy needs and climate commitments.
- Leverage ICF programmes to engage government, civil society and businesses to build consensus towards ambition and higher Brazilian emissions reduction targets, to help UK ambitions for UNFCCC COP26 agreeing 5 year targets.
