

Import of poultry meat and products from areas in US suspended

The Centre for Food Safety (CFS) of the Food and Environmental Hygiene Department announced today (November 24) that in view of a notification from the World Organisation for Animal Health (WOAH) about outbreaks of highly pathogenic H5N1 avian influenza in Edmunds County of the State of South Dakota, Fresno County of the State of California, Linn County and Marion County of the State of Oregon, and LaMoure County of the State of North Dakota in the United States (US), the CFS has instructed the trade to suspend the import of poultry meat and products (including poultry eggs) from the above-mentioned areas with immediate effect to protect public health in Hong Kong.

A CFS spokesman said that according to the Census and Statistics Department, Hong Kong imported about 21 470 tonnes of chilled and frozen poultry meat and about 57.11 million poultry eggs from the US in the first nine months of this year.

“The CFS has contacted the American authority over the issue and will closely monitor information issued by the WOAH and the relevant authorities on the avian influenza outbreaks. Appropriate action will be taken in response to the development of the situation,” the spokesman said.
