

# Monetary Authority announces countercyclical capital buffer ratio for Hong Kong

The following is issued on behalf of the Hong Kong Monetary Authority:

The Monetary Authority announced today (May 17) that the countercyclical capital buffer (CCyB) ratio for Hong Kong remains unchanged at 1.0 per cent.

"While there have been some initial signs of economic recovery in Hong Kong, we are still in the midst of high uncertainty given the fluid pandemic situation globally." the Monetary Authority, Mr Eddie Yue, said. "It is therefore appropriate to keep the CCyB ratio unchanged and continue to monitor the situation for a few more quarters."

Further details of the decision may be found in the [Announcement of the CCyB to Authorized Institutions](#) on the Hong Kong Monetary Authority's website.

## Background

In setting the CCyB ratio the Monetary Authority considered a series of quantitative indicators and qualitative information including an "indicative buffer guide" (which is a metric providing a guide for CCyB ratio based on the gap between the ratio of credit to GDP and its long term trend, and between the ratio of residential property prices to rentals and its long term trend). The latest indicative buffer guide, calculated based on 2020 Q4 data, signals a CCyB ratio of 2.25 per cent. The projection based on all available data suggests that the indicative buffer guide would very likely signal a similar CCyB ratio when all relevant 2021 Q1 data become available.

Whilst the indicative buffer guide, as its name suggests, provides only a "guide" for CCyB decisions, the determination of the jurisdictional CCyB ratio for Hong Kong is not a mechanical exercise and, in addition to the indicative buffer guide, the Monetary Authority also reviewed a range of other reference indicators. The information drawn from all these sources suggests that there have been some initial signs of economic recovery in Hong Kong, but the economy is still in the midst of high uncertainty given the fluid pandemic situation globally. It is therefore appropriate to keep the CCyB ratio unchanged at 1.0% and continue to monitor the situation for a few more quarters.

The CCyB is an integral part of the Basel III regulatory capital framework and is being implemented in parallel by the Basel Committee member jurisdictions worldwide. The CCyB has been designed by the Basel Committee to increase the resilience of the banking sector in periods of excess credit growth. The banking sector can then act as a "shock absorber" in times of

stress, rather than as an amplifier of risk to the broader economy.

The power to implement the CCyB in Hong Kong is provided by the Banking (Capital) Rules, which enable the Monetary Authority to announce a CCyB ratio for Hong Kong. The specific CCyB requirement applicable to a given Authorized Institution (AI) is expressed as a percentage of its CET1 capital to its total risk-weighted assets. Each AI's CCyB requirement may vary depending on the geographic mix of its private sector credit exposures and the CCyB applicable in each jurisdiction where it has such exposures.
