

# More than 137,000 people in UK receive first dose of COVID vaccine in one week

More than 137,000 people in the UK have received the first dose of the Pfizer/BioNTech COVID-19 vaccine in the first week of the largest vaccination programme in British history.

The government has today released provisional figures which show at least 137,897 people received their first dose of the vaccine by the end of Tuesday 15 December. 108,000 people were vaccinated in England.

The figures are provisional and subject to change. Formal statistics will be published every week from next week.

The majority of the vaccines have been administered to the over-80s, care home workers and NHS staff through more than 70 sites across the UK.

GP-led centres started vaccinating patients this week in England and the roll out will expand to care homes soon.

Over the coming weeks and months, the rate of vaccinations will increase as more doses become available and the programme continues to expand.

Health and Social Care Secretary Matt Hancock said:

Thanks to the hard work of the NHS across the UK, over 137,000 people have already received the first dose of the coronavirus vaccine.

This is just the start and we will steadily expand our vaccination programme – ultimately helping everyone get back to normal life.

The Pfizer/BioNTech vaccine is the first vaccine to be authorised for use by the medicines regulator, the Medicines and Healthcare products Regulatory Agency (MHRA). Patients require 2 doses of the vaccine – 21 days apart – for the vaccine to be fully effective.

Thanks to the work of the government's Vaccines Taskforce, 40 million doses of the Pfizer/BioNTech vaccine have been secured for the whole of the UK.

Rolling reviews on the Oxford/AstraZeneca and Moderna vaccines are underway and, if authorised by the MHRA, will mean there are more doses available to vaccinate those most in need.

All vaccinations in England are recorded between 8 December and 15 December and represent the first doses only.

The data for England is drawn from 2 sources depending on the vaccination site:

- for hospital sites the data is reported from the National Immunisation Management Service, which is the system of record for the NHS vaccination programme
- for local vaccination services this is an initial data extract from the Pinnacle system, which is being used by GPs to record COVID-19 vaccination events. This data will also be aggregated into the National Immunisation Management Service

A formal COVID-19 vaccine uptake publication will be published from next week.
