

Official Statistics: Latest official statistics on tuberculosis (TB) in cattle in Great Britain – monthly

Updated: Updated with latest statistical notice for July 2018.

This publication presents official monthly statistics on tuberculosis (TB) in cattle (i.e. bovine TB) in Great Britain. The statistics are obtained from the Animal and Plant Health Agency (APHA) work management IT support system, which is used for the administration of TB testing in GB. They are a snapshot of the position on the date on which the data were extracted. The information is subject to regular revision until all test results are available.

More detailed statistics for GB, England, Scotland, Wales and the English regions are provided in the accompanying spreadsheets. These datasets are updated monthly. The full statistical notice, including the headline statistics, is updated every quarter.
