

# Prepackaged wheat starch sample in breach of food labelling regulation

The Centre for Food Safety (CFS) of the Food and Environmental Hygiene Department announced today (August 12) that a sample of prepackaged wheat starch was found to contain sulphur dioxide, a preservative which is allowed to be used in certain foods, but the functional class and the name of the additive were not declared on the food label. Members of the public should not consume the affected batch of the product. The trade should also stop using or selling the affected batch of the product immediately if they possess it.

Product details are as follows:

Product name: Wheat Starch  
Brand: Lee Cheung Woo  
Place of origin: Australia  
Net weight: 600 grams  
Best-before date: December 21, 2025  
Sole agent: Shun Fat Ma Kee

"The CFS collected the above-mentioned sample from a retail outlet in Sha Tin for testing under its routine Food Surveillance Programme. The test result showed that the sample contained sulphur dioxide. Although the sulphur dioxide level detected is within the legal limit, the functional class and the name of the additive were not declared on the food label of the sample," a spokesman for the CFS said.

"The CFS has informed the sole agent concerned of the irregularity and instructed it to stop sale and remove from shelves the affected batch of the product. The sole agent concerned has initiated a recall according to the CFS's instructions. Members of the public may call its hotline at 3422 3698 during office hours for enquiries about the recall," the spokesman added.

Sulphur dioxide is a preservative which can be used in a variety of foods including dried vegetables, dried fruits, pickled vegetables and salted fish products. Sulphur dioxide is water-soluble, and most of it can be removed through washing and cooking. However, susceptible individuals who are allergic to this preservative may experience breathing difficulties, headaches and nausea after consumption.

The spokesman reminded the food trade that the use of preservatives in food must comply with the Preservatives in Food Regulation (Cap. 132BD). Furthermore, the Food and Drugs (Composition and Labelling) Regulations (Cap. 132W) require that for all prepackaged food for sale in Hong Kong containing sulphite in a concentration of 10 parts per million or more, the functional class of the sulphite and its name shall be specified in the list of ingredients. Offenders are liable to a maximum fine of \$50,000 and six months' imprisonment upon conviction.

The CFS will alert the trade, continue to follow up on the incident and take appropriate action. An investigation is ongoing.
