

# Press release: More pupils in England reach expected standard at Key Stage 2

More children across the country met the expected standard at the end of primary school this summer in English and mathematics, amid rising education standards in England, Minister for School Standards Nick Gibb announced today (Tuesday 10 July).

Figures published today show:

- 64 per cent of pupils met the expected standard in all of reading, writing and mathematics at Key Stage 2 nationally. This figure was 61 per cent in 2017;
- 75 per cent met the expected standard in reading, up 4 percentage points on last year;
- 78 per cent met the expected standard in writing. This figure was 76 per cent in 2017;
- 76 per cent met the expected standard in mathematics, up on 1 percentage point on last year; and
- 78 per cent met the expected standard in grammar, punctuation and spelling, up 1 percentage point on last year.

The new national curriculum and assessments have set a higher standard in schools and today's rising results show more pupils are meeting that standard, thanks to the hard work of teachers and pupils, and government reforms.

This year's results are the third to be released following the introduction of a more rigorous national curriculum assessments in Summer 2016, bringing primary education in line with the best in the world.

Standards are rising in primary schools. There are now 154,000 more six-year-olds on track to become fluent readers today than in 2012, in 2017 the attainment gap between disadvantaged primary pupils and their more affluent peers had narrowed by 10.5 per cent since 2011, and England's rise up the international PIRLS rankings for literacy put the success of the government's reforms on a global scale.

School Standards Minister Nick Gibb said:

A good primary education lays the foundations for success at secondary school and beyond. That's why we introduced a more rigorous, knowledge-rich primary school curriculum – with an emphasis on reading and fluency in arithmetic – to ensure every child is helped to reach their potential from the moment they start school.

Today's results and the rising standards we are seeing in our primary schools are the fruit of our reforms and a tribute to the

hard work and dedication of teachers across the country. These reforms promise even more success in the years to come and will help to improve education for every child, no matter their background.

The government has invested in programmes to help raise standards in our primary schools, including a £26 million network of specialist English Hubs around the country to improve pupils' literacy and £41 million to follow the same approach to teaching maths as world leading countries through the Shanghai Mastery for Maths programme. □This is on top of wider changes to the primary assessment system which will reduce unnecessary workload for teachers so they can focus on what really matters in the classroom.

Today's figures build on the record 1.9 million more children now in good or outstanding schools than in 2010. The government is continuing to ensure all parents have a good school place on their doorstep, with the recent announcement of [£680million to create 40,000 more good school places](#) in primary and secondary schools. Since 2010, 825,000 new school places have been created, with recent analysis showing 91 per cent of those in 2016-17 were in good or outstanding schools.
