

Provisional statistics of retail sales for November 2020

The Census and Statistics Department (C&SD) released the latest figures on retail sales today (January 4).

â€‹ The value of total retail sales in November 2020, provisionally estimated at \$28.7 billion, decreased by 4.0% compared with the same month in 2019. The revised estimate of the value of total retail sales in October 2020 decreased by 8.7% compared with a year earlier. For the first eleven months of 2020 taken together, it was provisionally estimated that the value of total retail sales decreased by 25.3% compared with the same period in 2019.

â€‹ After netting out the effect of price changes over the same period, the provisional estimate of the volume of total retail sales in November 2020 decreased by 4.7% compared with a year earlier. The revised estimate of the volume of total retail sales in October 2020 decreased by 9.2% compared with a year earlier. For the first eleven months of 2020 taken together, the provisional estimate of the total retail sales decreased by 26.6% in volume compared with the same period in 2019.

â€‹ Analysed by broad type of retail outlet in descending order of the provisional estimate of the value of sales and comparing November 2020 with November 2019, the value of sales of commodities in department stores decreased by 12.4%. This was followed by sales of food, alcoholic drinks and tobacco (-8.8% in value); jewellery, watches and clocks, and valuable gifts (-16.1%); wearing apparel (-13.3%); medicines and cosmetics (-34.8%); fuels (-5.5%); footwear, allied products and other clothing accessories (-18.3%); books, newspapers, stationery and gifts (-17.7%); Chinese drugs and herbs (-15.2%); and optical shops (-16.5%).

â€‹ On the other hand, the value of sales of electrical goods and other consumer durable goods, not elsewhere classified increased by 22.0% in November 2020 over a year earlier. This was followed by sales of commodities in supermarkets (+1.6% in value); other consumer goods, not elsewhere classified (+15.3%); motor vehicles and parts (+22.2%); and furniture and fixtures (+15.1%).

â€‹ Based on the seasonally adjusted series, the provisional estimate of the value of total retail sales increased by 5.6% in the three months ending November 2020 compared with the preceding three-month period, while the provisional estimate of the volume of total retail sales increased by 5.4%.

â€‹ These retail sales statistics measure the sales receipts in respect of goods sold by local retail establishments and are primarily intended for gauging the short-term business performance of the local retail sector. Data on retail sales are collected from local retail establishments through the Monthly Survey of Retail Sales (MRS). Local retail establishments with and without physical shops are covered in MRS and their sales, both through

conventional shops and online channels, are included in the retail sales statistics.

â€‹ The retail sales statistics cover consumer spending on goods but not on services (such as those on housing, catering, medical care and health services, transport and communication, financial services, education and entertainment) which account for over 50% of the overall consumer spending. Moreover, they include spending on goods in Hong Kong by visitors but exclude spending outside Hong Kong by Hong Kong residents. Hence they should not be regarded as indicators for measuring overall consumer spending.

â€‹ Users interested in the trend of overall consumer spending should refer to the data series of private consumption expenditure (PCE), which is a major component of the Gross Domestic Product published at quarterly intervals. Compiled from a wide range of data sources, PCE covers consumer spending on both goods (including goods purchased from all channels) and services by Hong Kong residents whether locally or abroad. Please refer to the C&SD publication "Gross Domestic Product (Quarterly)" for more details.

Commentary

â€‹ A government spokesman said that the year-on-year decline in retail sales narrowed further in November, primarily due to the notable increase in sales at retail outlets of consumer durable goods.

â€‹ Looking ahead, the spokesman pointed out that as inbound tourism remains at a standstill, and the fourth wave of the local epidemic has weighed on local consumption sentiment since the latter part of November, the business environment of the retail trade will remain challenging in the near term. The Government will monitor the developments closely.

Further information

â€‹ Table 1 presents the revised figures on value index and value of retail sales for all retail outlets and by broad type of retail outlet for October 2020 as well as the provisional figures for November 2020. The provisional figures on the value of retail sales for all retail outlets and by broad type of retail outlet as well as the corresponding year-on-year changes for the first eleven months of 2020 taken together are also shown.

â€‹ Table 2 presents the revised figures on volume index of retail sales for all retail outlets and by broad type of retail outlet for October 2020 as well as the provisional figures for November 2020. The provisional figures on year-on-year changes for the first eleven months of 2020 taken together are also shown.

â€‹ Table 3 shows the movements of the value and volume of total retail sales in terms of the year-on-year rate of change for a month compared with the same month in the preceding year based on the original series, and in terms of the rate of change for a three-month period compared with the preceding three-month period based on the seasonally adjusted series.

â€‹ The classification of retail establishments follows the Hong Kong

Standard Industrial Classification (HSIC) Version 2.0, which is used in various economic surveys for classifying economic units into different industry classes.
