## Red tide sighted

A red tide has been sighted over the past week, an inter-departmental red tide working group reported today (March 8).

The red tide was spotted by staff of the Leisure and Cultural Services Department at Golden Beach, Tuen Mun, on March 4 and the red flag was hoisted at the beach immediately. The red tide has dissipated and no associated death of fish has been reported.

A spokesman for the working group said, "The red tide was formed by Mesodinium rubrum, which is commonly found in Hong Kong waters and is nontoxic."

The Agriculture, Fisheries and Conservation Department (AFCD) urged mariculturists at Ma Wan fish culture zone to monitor the situation closely and increase aeration where necessary.

Red tide is a natural phenomenon. The AFCD's proactive phytoplankton monitoring programme will continue monitoring red tide occurrences to minimise the impact on the mariculture industry and the public.
