

Research and analysis: APHA disease surveillance reports, 2017 onwards

Updated: Further 2018 monthly reports now available.

The monthly report is a summary of disease data gathered by the Animal and Plant Health Agency (APHA) Veterinary Investigation Centres.

It is part of the disease surveillance system which is used to monitor new diseases in cattle, sheep, pigs and poultry, and to monitor changing trends in existing diseases.

A similar report is produced for Scotland by the Scottish Agricultural Colleges Veterinary Services Division (SACVSD).

See the [APHA animal disease surveillance reports collection](#) for further reports.
