

Service suspension of community testing centres and mobile specimen collection stations

The Government announced today (October 8) that testing services at all community testing centres (CTCs) have been suspended due to the Black Rainstorm Warning Signal. Besides, all mobile specimen collection stations were closed and testing services suspended.

Upon the cancellation of the Black Rainstorm Warning Signal two hours or more before the normal closing time of the CTCs and mobile specimen collection stations, the testing services of the CTCs and indoor mobile specimen collection stations will resume as soon as possible.
