Shenzhen police have set up an intelligent system to stop pedestrians from jaywalking. Violators will be recorded by the country's personal credit system.

The high-tech system created by traffic police of Nanshan District consists of several parts, including a video collector, controller, display screen, turnstile, front-end computer and voice broadcast system.

When the red light is on, turnstiles will be closed, and the voice broadcast will remind pedestrians to stop and wait. If anyone forces their way through the turnstiles, his or her face will be captured by the CCTV and the violation will be recorded in the social credit system.

According to a local police officer, the system can also change the rotation intervals of the turnstile based on computation, which will provide more convenience for pedestrians, especially aged and disabled people.
