

# [Guidance: All Reservoir Panel engineers: contact details](#)

*Updated:* Updated contact details for All Reservoir Panel engineers.

As a reservoir owner or operator you are required to appoint a panel engineer for large raised reservoirs, including those classed as 'high-risk':

- during the design and construction of any reservoir with an 'escapable' volume greater than 25,000 cubic metres (construction engineer)
- where an abandoned reservoir is to be restored and will be brought back into use as a large raised reservoir again (construction engineer)
- to supervise the reservoir once built (at all times) and produce a statement once a year (supervising engineer)
- to carry out an inspection every 10 years, identify safety work and set you deadlines for the work to be completed (inspecting engineer)
- to supervise and certify any recommended measures to be taken in the interests of safety (inspecting engineer)

Reservoirs that have been determined as 'not high-risk' only need to appoint a construction engineer during the design and construction, restoration or alteration of the reservoir. Supervising and inspecting engineers are not required.

## **[Statutory guidance: Regulatory guidance for installations: the greenhouse gas emissions trading scheme](#)**

*Updated:* Regulatory guidance for installations updated to reflect changes to the revised 2018 scheme year reporting and surrender deadlines in the UK Regulations which came into force 27 December 2017, as well as our updated Enforcement and Sanctions policy.

This guidance aims to provide help for those operating or regulating activities that are covered by the Greenhouse Gas Emissions Trading Scheme Regulations 2012.

This guidance applies to Phase III of the European Union emissions trading scheme (EU ETS) only (which commences on 1 January 2013) and excludes aviation, for which there is separate guidance.

To ensure this guidance is current and up to date, it will be updated from time to time.

## National Statistics: Food chain productivity

*Updated:* Amended chart 4 Retail.

The total factor productivity of the United Kingdom food chain is examined within the four main food industry sectors and compared to the wider economy. Total factor productivity relates the volume of output to the volume of labour, capital and purchases, and so can provide a measure of efficiency. Total factor productivity provides a comprehensive picture of growth. Presented as an index, it relates major inputs of labour, intermediate purchases and capital consumption to outputs (turnover). There is a practical upper limit on the quantity of food that people in the UK want to consume but increases in outputs can be achieved by increases in the quality of foods (value added) and by increases in exports. Increases in total factor productivity can be achieved through increases in outputs and/or by reductions in inputs.

## Research and analysis: Energy Companies Obligation (ECO) brokerage results

*Updated:* ECO brokerage results 16 October 2018 published

Brokerage operates as a fortnightly anonymous auction where providers of the Energy Companies Obligation (ECO) can sell 'lots' of ECO Carbon Saving Obligation, ECO Carbon Saving Communities and ECO Affordable Warmth, to

energy companies in return for ECO subsidy.

The results from auctions 1 (15 January 2013) to 44 (23 September 2014) and 77 (9 February 2016) onwards show the number of lots submitted. However the results from auctions 45 (7 October 2014) to 76 (26 January 2016), reflect the number of bids submitted.

No auction took place for the following auction numbers, because no lots were submitted for them:

- 135 (29 May 2018)
- 134 (15 May 2018)
- 133 (1 May 2018)
- 132 (19 April 2018)
- 130 (20 March 2018)
- 129 (6 March 2018)
