

Millions in Lake Chad suffering 'at no fault of their own' need world's support, urges UN aid chief

23 February 2017 – Ahead of a major donors conference in the Norwegian capital, Oslo, seeking to generate global action to tackle the complex crisis in Africa's Lake Chad Basin, the top United Nations relief official highlighted that investing in support for the region will in turn help strengthen broader security around the world for all to benefit.

"The opportunity we have at this gathering in Oslo [is for a partnership] between those who have been calling for enormous amounts of support [in the region and] to make sure that we can meet the needs of people as they go through terrible suffering, through no fault of their own," UN Emergency Relief Coordinator Stephen O'Brien told *UN News*.

The UN aid chief's comments come ahead of the Oslo Humanitarian Conference on Nigeria and the Lake Chad Region, which will be held tomorrow and which will be hosted by Norway, together with Nigeria, Germany and the UN. Aiming to draw attention to the crisis, which has been largely overlooked, the event seeks to mobilize greater international involvement and increased funding for humanitarian efforts to prevent the situation from deteriorating further.

According to the Office for the Coordination of Humanitarian Affairs (OCHA) – the UN's relief wing – nearly 11 million people in the region, comprising Cameroon, Chad, Niger and Nigeria, need humanitarian assistance suffer from severe acute malnutrition, among them, about half a million are very young children – babies.

The appeal, amounting \$1.5 billion will fund relief operations in the region, including, inter alia, providing life-saving food and nutrition support to 1.6 million people, livelihood support to 1.4 million, primary health care for 4.4 million, measles vaccinations for over one million children, education support for almost 300,000 girls and boys and safe water, improved sanitation and hygiene for 2.3 million displaced families and their host communities.

VIDEO: UN Emergency Relief Coordinator, Stephen O'Brien, has made a strong case for the need to urgently assist over 10 million people in Africa's Lake Chad Basin, noting that the humanitarian support "is an investment for all of us."

Of the total population in need (10.7 million), about 8.5 million are in north-eastern Nigeria which has seen years of violence as a result of Boko Haram militancy.

In particular noting the challenges in north-eastern Nigeria, Mr. O'Brien

hailed the work of the humanitarian actors on the ground “they are staying, they are delivering – there have been some terrible and tragic losses of very brave and brilliant aid workers – and they continue working in some of the most atrocious and difficult conditions.”

Pointing out that the 2016 appeal was only about 50 per cent funded, he underlined that it meant that “we can only do about half of what we know needs to be done,” said Mr. O’Brien, also the UN Under-Secretary-General for Humanitarian Affairs and the head of OCHA.

Also, noting that the international community had to be a partner and show that it has enough capacity and enable relief programmes for those who need it the most, he said that the support would help ensure that “the people [in need] can get water and food; we can [avert] the terrible severe acute malnutrition, we can seek to avert famine, which is exacerbated by some of the climatic events, and indeed, climate change.”

For the eighth consecutive year, civilians are suffering from Boko Haram violence in Africa’s Lake Chad Basin. These women live in a compound in Banki town, in Nigeria’s Borno state, close to the Cameroonian border. They believe their husbands were killed and have no source of income. Photo: OCHA/O. Fagan

The activities of Boko Haram continue to undermine the peace and stability. Insecurity, especially in parts of Nigeria’s Borno and Yobe states, continues to hamper humanitarian operations. In areas that have recently opened up, civilians desperately need health, protection, shelter, water and sanitation. Protection needs in the countries north-east, particularly in newly accessible areas in Borno, remain severe. Photo: OCHA

While facing human rights violations and abuses including attacks, disappearances, forced displacement, about half a million children in Borno are expected to suffer from severe acute malnutrition this year. Famine-like conditions loom for over 120,000 people in the most affected parts of Borno and Yobe, while an estimated 11 million people in the region, comprising Cameroon, Chad, Niger and Nigeria, need humanitarian assistance. Photo: OCHA

Although about one million displaced people have returned to their areas of origin since August 2015, and while the number continues to increase, many returnees remain stranded in other sites for displaced people because of ongoing insecurity, destroyed infrastructure and the absence of basic services. In Borno, for example, more than 470 health facilities are partially or completely destroyed. Photo: OCHA

The UN’s humanitarian response has increased over the past year. Food

assistance grew from reaching 600,000 people in August 2016 to 2.1 million people by December. Despite this progress, immediate funding is urgently required to support the scale-up of humanitarian operations. Photo: OCHA

Press release: PM meeting with Crown Prince of Abu Dhabi: 23 February 2017

From:

First published:

23 February 2017

Part of:

Prime Minister May met with His Highness Sheikh Mohamed bin Zayed Al Nahyan and they discussed regional security, defence and trade.

A Downing Street spokesperson said:

The Prime Minister welcomed His Highness Sheikh Mohamed bin Zayed Al Nahyan, Crown Prince of Abu Dhabi, to Downing Street today for their first formal bilateral meeting.

They discussed a range of international defence and security matters, and agreed on the importance of efforts to combat terrorism and bring stability to the Middle East. The Prime Minister reiterated the message she gave to the Gulf Cooperation Council Heads of State in December, that Gulf security is fundamental to our security, and that we remain a committed partner on this agenda.

On regional issues, they agreed on the need to find solutions to the conflicts in Syria and Yemen, and stressed the importance of inclusive political settlements as the only way to deliver long-term stability.

The Prime Minister talked about the conference on Somalia that the UK will host this year, and welcomed the Crown Prince's commitment to work together to ensure Somalia's recent progress can continue.

They also committed to build on the close and historic bilateral relationship between the UK and United Arab Emirates, including by stepping up our already strong trade and investment ties.

UN health agency reports depression now 'leading cause of disability worldwide'

23 February 2017 – Depression is the leading cause of disability worldwide, the United Nations health agency today reported, estimating that it affects more than 300 million people worldwide – the majority of them women, young people and the elderly.

An estimated 4.4 per cent of the global population suffers from depression, according to a report released today by the UN World Health Organization (WHO), which shows an 18 per cent increase in the number of people living with depression between 2005 and 2015.

“Depression is different from usual mood fluctuations and short-lived emotional responses to challenges in everyday life,” the WHO said.

According to the report, which was released today ahead of April’s World Health Day, prevalence rates seem to peak in adults at around 60 years of age, but are also seen in teenagers.

When long-lasting and with moderate or severe intensity, depression may become a serious health condition leading, at its worst, to suicide. According to the report, some 800,000 people kill themselves every year, a significant number of them young adults between the ages of 15 and 29.

“Depression results from a complex interaction of social, psychological and biological factors,” WHO said, adding that depression can lead to more stress and dysfunction and worsen the affected person’s life situation.

To reduce depression, the UN agency recommends effective school-based programmes and exercise regimes.

Different psychological and psychosocial treatments were also noted in the report, which notes that health-care providers may offer behavioural activation, cognitive behavioural therapy [CBT], and interpersonal psychotherapy [IPT], or antidepressant medication (such as selective serotonin reuptake inhibitors [SSRIs] and tricyclic antidepressants [TCAs]).

Among the findings, however, the authors caution against using antidepressants to treat children or to quickly offer them to adolescents.

Some psychological treatment formats for consideration include individual and/or group face-to-face psychological treatments delivered by professionals and supervised lay therapists.

[‘Turn the tide on plastic’ urges UN, as microplastics in the seas now outnumber stars in our galaxy](#)

23 February 2017 – Launching an unprecedented global campaign, the United Nations Environment Programme (UNEP) is urging everyone to eliminate the use of microplastics and stop the excessive, wasteful use of single-use plastic, to save the world’s seas and oceans from irreversible damage before it’s too late.

“Plastic pollution is surfing onto Indonesian beaches, settling onto the ocean floor at the North Pole, and rising through the food chain onto our dinner tables,” Erik Solheim, the Executive Director of UNEP, said in a news release announcing the campaign.

“We’ve stood by too long as the problem has gotten worse. It must stop,” he added.

Through its Clean Seas campaign, the agency has urged countries and businesses to take ambitious measures to eliminate microplastics from personal-care products, ban or tax single-use plastic bags, and dramatically reduce other disposable plastic items by 2022.

Ten countries have already joined the initiative with far-reaching pledges: Indonesia has committed to slash its marine litter by 70 per cent by 2025; Uruguay will tax single-use plastic bags later this year; and Costa Rica will take measures to dramatically reduce single-use plastic through better waste management and education, according to UNEP.

These initiatives could not come sooner as up to 80 per cent of all litter in the oceans are made of plastic.

According to estimates, by 2050, 99 per cent of earth’s seabirds will have ingested plastic

An illustration of the sheer magnitude of the problem is that as much as 51 trillion microplastic particles – 500 times more than stars in our galaxy – litter the seas.

Each year, more than eight million metric tonnes of plastic end up in oceans, wreaking havoc on marine wildlife, fisheries and tourism, and cost at least \$8 billion in damage to marine ecosystems. According to estimates, by 2050, oceans will have more plastic than fish if present trends are not arrested.

According to UNEP actions to stem the growing tide of maritime litter could

include reducing the use of single-use plastics at the individual level such as by using reusable shopping bags and water bottles, choosing products without microbeads and plastic packaging, and not using straws to drink.

RELATED: UN environment agency urges ban of microplastics in cosmetics and personal care products

“Whether we choose to use plastic bags at the grocery store or sip through a plastic straw, our seemingly small daily decisions to use plastics are having a dramatic effect on our oceans,” said film actor and founder of the Lonely Whale Foundation, Adrian Grenier.

Similarly, on larger and commercial scale, supply chains can be modified.

One such example is the technology company DELL Computers: which has announced that it will use recovered ocean plastic in its product packaging.

“DELL is committed to putting technology and expertise to work for a plastic-free ocean,” said its Vice President for Global Operations, Piyush Bhargava. “Our new supply chain brings us one step closer to UNEP’s vision of Clean Seas by proving that recycled ocean plastic can be commercially reused.”

According to UNEP, major announcements are also expected at the upcoming conference on The Ocean at the UN Headquarters in New York (5-9 June), and UN the Environment Assembly to be held in the Kenyan capital, Nairobi, in December.

“The ocean is the lifeblood of our planet, yet we are poisoning it with millions of tonnes of plastic every year,” expressed Peter Thomson, the President of the UN General Assembly, highlighting the upcoming conference and urging for ambitious pledges to reduce single-use plastic.

“Be it a tax on plastic bags or a ban on microbeads in cosmetics, each country [can] do their bit to maintain the integrity of life in the Ocean.”
