## **News story: Animal medicines prosecution: Mr Murray McGregor**

From:

First published:

8 February 2017

Details of the prosecution of Mr Murray McGregor. Published in February 2017.

On 18th January 2017 at Perth Sheriff Court, Mr Murray McGregor plead guilty to importing an unauthorised veterinary medicinal product, possession of an unauthorised veterinary medicinal product and that he did administer an unauthorised veterinary medicine under the Veterinary Medicines Regulations 2008 and 2009.

These charges related to the product Terramycin 100MR which was administered to Mr McGregor's bee hives.

On 1st February 2017 at Perth Sheriff Court, Mr Murray McGregor was fined £2500, reduced by a third from £3750 for an early plea.

## **Press release: New Northumberland fish passes open up stream**

Two new fish passes on a Northumberland stream are giving salmon and sea

trout easier access to 22km of watercourse.

The work by the Environment Agency and Northumberland Rivers Trust at South Low, in north Northumberland near Berwick, is making it easier for fish to migrate and spawn.

Two large weirs were preventing fish movement upstream, but both weirs have been changed to make it easier for sea trout and salmon to make their way to their spawning grounds.

It follows work to make it easier for fish to pass through Environment Agency tidal gates at the coast, where the sea meets the stream.

Since then, work has been taking place to make it easier for fish to move further upstream.

## **Easier for fish**

Robbie Stevenson, Fisheries Technical Officer with the Environment Agency, said:

We've worked closely with partners to carry out a lot of positive work in this area, to look at issues which might be having an impact on fish populations.

The alterations to the weirs will open up 22km of watercourse for fish and make it far easier for them to travel upstream.

We've worked really hard together with our partners over the years to make dramatic improvements to water quality.

But there is always more we can do and this project at South Low is the sort of work which is taking place right across the North East and the country to protect and enhance our rivers and streams.

The £100,000 project has been part funded by the Environment Agency, supplemented by private landowner contributions and the work carried out by volunteers.

## **Important fish passes**

Peter Kerr, Director of Northumberland Rivers Trust, who was also designer and project manager for this project, added:

We are delighted to have been able to add these two important fish passes by working in partnership.

The contractors, WL Straughan and Son, did an excellent job in some challenging weather conditions, including the floods following Storm Angus.

After we completed the lower of the passes we saw some big sea trout trying to get past the upper weir, so we are confident that the lower one works well and that there are many migratory fish trying to return to the South Low.

The recent completion of the upper pass will now let these fish access many miles of spawning gravels.
