

Friends of Riverside Nature Park meeting

Last night, I attended the latest Friends of Riverside Nature Park committee meeting, held at the Mitchell Street Centre.

There was a useful update from environment officers from the council's Neighbourhood Services about proposed landscape improvements on Riverside Drive and Avenue running from the nature park, eastwards along to the Riverside Pavilion east of the airport. At the east end of this area, there will also be parking improvements [I highlighted](#) yesterday.

The landscape proposals will be discussed at the council's Neighbourhood Services Committee in the coming weeks to obtain necessary approval.

Press release: PM call with Sinn Fein leader Michelle O'Neill: 25 January 2017

From:

First published:

26 January 2017

Part of:

Prime Minister Theresa May spoke to Michelle O'Neill to congratulate her on becoming the leader of Sinn Fein in Northern Ireland.

A Downing Street spokesperson said:

The Prime Minister spoke to Michelle O'Neill to congratulate her on

her new appointment as leader of Sinn Fein in Northern Ireland.

The Prime Minister said she looked forward to working with her and that she hoped that following the elections all parties would be able to come together to find a way forward for Northern Ireland.

She added that the UK government remained committed to building on the progress made in Northern Ireland to ensure a strong, stable devolved government that works for everyone.

[News story: Gross Domestic Product \(GDP\): What it means and why it matters](#)

GDP is the size of the economy at a point in time

GDP measures the total value of all of the goods made, and services provided, during a specific period of time.

Goods are things such as your new washing machine, or the milk that you buy. Services include the haircut from your hairdresser, or repairs done by your plumber.

It's only final goods and services that are sold to you and me that matter for GDP though. So if some tyres roll off a production line and are sold to a car manufacturer, the value of the tyres isn't included in GDP, it is reflected in the value of the car.

The amount you pay, or the market value of that good or service, is what's important as these are added together to get GDP.

UK GDP includes goods and services produced in the UK

Gross Domestic Product means that GDP is only measuring things that are produced within the borders of the UK.

This is important, because if a British company is producing cars in China, they're not contributing towards UK GDP.

Sometimes people use the phrase Real GDP

This is because GDP can be expressed in nominal or real terms. Real GDP takes the value of goods and services produced in the UK, but it takes into account changing prices to remove the effect of rising prices over time, otherwise

known as inflation.

Real GDP is otherwise known as the 'constant price' measure of GDP.

Nominal GDP still measures the value of all the goods and services produced in the UK, but at the time they are produced.

It is otherwise known as the 'current price' measure of GDP.

There's more than one way of measuring GDP

Just imagine trying to add together the value of everything made in the UK – that's no easy feat, which is why there is more than one way of measuring GDP.

GDP is calculated three ways, adding up:

- all the money spent on goods and services
- the money earned through wages and profits
- the value of goods and services produced

These are known as the expenditure, income and output measures of GDP, respectively. All three different methods of calculating GDP should, in theory, give the same number.

In the UK, we get a new GDP figure every 3 months

So if the GDP figure is higher than it was in the previous 3 months – the economy is growing.

If it's lower – the economy is getting smaller.

The Office for National Statistics (ONS) is responsible for calculating the GDP figure for the UK. Naturally it collects a lot of data from a lot of different sources to do this. It surveys tens of thousands of UK firms working in manufacturing, services, retail and construction, as well as using a wealth of administrative data.

You might have heard people refer to the first or second estimate of GDP

The ONS calculates GDP using each of the expenditure, income and output measures of GDP. The first estimate is just the output measure, with expenditure and income measures added from the second estimate.

The UK is one of the fastest countries in the world to compile the first estimate, although to do this it doesn't have all the data it needs for a complete picture.

At this point, the ONS has only gathered about 40% of the information it needs – so this can be revised at the second and third estimates, when they have gathered more information. GDP can also be revised at a later date due to changes in the methods for estimating it, or to incorporate less frequent

data.

GDP matters because it shows how healthy the economy is

Rising GDP means the economy is growing, and the resources available to people in the country – goods and services, wages and profits – are increasing.

9 Chinese think tanks among world's best

A report released on Wednesday shows that the number of Chinese think tanks has grown rapidly in the world during the past year.

Nine Chinese think tanks were included among the world's top think tanks in the 2016 Global Go To Think Tank Index Report, published by the think tank and civil societies program at the Lauder Institute of University of Pennsylvania (TTCSP).

Selected from a list of 175 top think tanks in the world, these nine think tanks are China Institutes of Contemporary International Relations; Chinese

Academy of Social Sciences; China Institute of International Studies; Development Research Center of the State Council; Shanghai Institute for International Studies; Institute of International and Strategic Studies Peking University; Unirule Institute of Economics; Center for China and Globalization; and Chongyang Institute for Financial Studies, with China Institute of Contemporary International Relations ranking the highest at 33.

The report shows the United States at the top with the largest number of think tanks, at 1,835, while China holds the second place with 435, followed by UK, 288, and India, 280.

The 2016 study was subdivided into 52 lists based on such categories as region, area of research and special achievement, in which 41 Chinese think tanks were selected with 18 of them also outstanding in the Top Think Tanks in China, India, Japan and the Republic of Korea.

"It's very meaningful that a number of Chinese think tanks are influencing the world," said Wang Huiyao, president of the Center for China and Globalization. "More think tanks are needed to help our government in making decisions accurately and scientifically. Meanwhile, think tanks serve more like a 'soft power', which can also help enhance our country's international stature," he said.

According to the report, three Chinese think tanks have made their mark Think Tanks to Watch. They are Shanghai Advanced Institute of Finance, Unirule Institute of Economics, and Center for China and Globalization.

Another four are among the Best New Think Tanks, including Alibaba think tank, 21st Silk Road Collaborative Center, Qianhai Institute for Innovative Research, and Center for Eco-Financial Studies, with Alibaba think tank ranking the highest at 23.

Referred to as "think tanks' think tank", TTCSP manages and supports a global network of close to 7,000 think tanks and trains future think tank scholars and executives.

"Since 2006, our ranking process has been refined and streamlined, and the number and scope of the institutions and individuals involved has steadily grown." said James McGann, director of the TTCSP.

The 2016 report shows continued expansion of think tanks in Asia, Latin America, Africa, the Middle East, and North Africa.

Besides, there is increasing diversity among think tanks in these regions with independent, political party affiliated, and corporate and business sector think tanks that are being created with greater frequency.

Shooting gallery owner given 3-year suspended sentence

A Chinese woman who ran a small recreational shooting gallery in north China's Tianjin Municipality has received a suspended three-year prison sentence for illegal gun possession.

The sentence was handed down by Tianjin No. 1 Intermediate People's Court.

Zhao Chunhua, 51, opened a roadside shooting gallery to help support her family but was arrested in October. Among the model guns seized from her stall, six were identified as real guns.

She was sentenced to three and a half years in prison for illegal gun possession by a district court in Tianjin in December last year, triggering a public outcry, with many calling the verdict harsh. It caused widespread debate about the criteria for legally defining guns.

The Intermediate People's Court took over the case after Zhao appealed against the initial verdict.

According to the court, Zhao knew that the model guns could cause injuries and could not be purchased through legal channels, therefore, she had the subjective intention to possess them.

Given that Zhao showed remorse and the guns she owned were for recreational shooting, posing little threat to society, Zhao was given a three-year probation.

Zhao pleaded guilty and was immediately released.
