

Faced with 'clear science, real threats' countries must remain committed to Paris climate deal – UN

23 March 2017 – Climate change is an unprecedented and growing threat to peace, prosperity and development and addressing it presents an economic opportunity for Governments and business, senior United Nations officials said today.

“We are dealing with scientific facts, not politics. And the facts are clear. Climate change is a direct threat in itself, and a multiplier of many other threats,” UN Secretary-General António Guterres told a General Assembly High-Level action event aimed at invigorating political momentum on climate change, highlighting its deep links to the UN 2030 Agenda on Sustainable Development.

Mr. Guterres said his messages to the meeting are simple.

“First, climate change is an unprecedented and growing threat – to peace and prosperity and the same in relation to the Sustainable Development Goals (SDGs). Second, addressing climate change is a massive opportunity that we cannot afford to miss,” he said.

The Paris Agreement on climate change adopted in December 2015 is unique in its universality, with every single government having signed it. The pact entered force in less than a year. To date more than 130 Parties have ratified it, and the numbers are growing monthly.

The countries that supported the Paris Agreement are the same that adopted the 2030 Agenda – they comprise all UN Member States.

The reason for this consensus is clear: all nations recognize that implementing the 2030 Agenda goes hand-in-glove with limiting global temperature rise and increasing climate resilience.

Mr. Guterres said that last year was once again the hottest on record. Sea ice is at a historic low and sea levels at a historic high. These trends are indisputable, he stressed, explaining that consequences of climate change include food insecurity, water scarcity, poverty and displacement.

Tackling climate change is a tremendous opportunity for Governments and

business as there is no trade-off between a healthy environment and a healthy economy.

“We can have both. Green business is good business,” he said.

Climate action is a necessity and can advance the attainment of sustainable development goals.

“How we go about it can be the subject of scientific and political debate. But there is no question that we must act, urgently and decisively, now,” Mr. Guterres said. “And it remains the only viable way to safeguard peace, prosperity and a sustainable future.”

Also addressing the event, were Peter Thomson, President of the General Assembly, and Patricia Espinosa, Executive Secretary of the UN Framework Convention on Climate Change.

Still possible to bend curve on climate change trajectories

Mr. Thomson said that he had recently met with Petteri Taalas, the Secretary-General of the UN World Meteorological Organization (WMO), who confirmed that the world is currently on track towards a 3 to 4°C increase in global temperatures.

“I have always understood [...] that once we reach the 3°C – 4°C range, humanity’s survival on this planet will be put in jeopardy,” he said.

Cyclone Winston and Cyclone Pam which devastated Fiji and Vanuatu in recent years were among the strongest tropical cyclones to ever make landfall in the Southern Hemisphere. Fiji, an island nation from which Mr. Thomson hails, has already begun relocating low-lying villages to higher ground, away from the encroaching shoreline and the rising threat of storm surges.

“While the prognosis is dire, the scientific community assures us it is possible to bend the curve on current trajectories, if we work together to curb the growth of global greenhouse gas emissions,” Mr. Thomson said, reiterating his call for all parties to the Paris Agreement to ratify it without delay and for those that have already done so to deliver on their commitments.

Speech: Together, we can build further our partnerships for prosperity

Your Excellency, Governor Abubakar Sani Bello, and distinguished guests

I am delighted to be back here in Minna. This is my second visit during my time in Nigeria. I think it’s important for foreign representatives to get

out of the capital of the countries in which they serve, even more so in a country as large and diverse as Nigeria. The UK is firmly committed to its relationship with Nigeria at the state level as well as the federal.

The theme of our event today is Prosperity – seizing the opportunities across Nigeria, and tackling the barriers and the challenges that are currently holding back the scope for growth, trade and investment. We are also able to discuss initial findings from a report we have commissioned from PWC about the business environment and opportunities at state-level –looking in detail at Anambra, Edo, Ogun, and Niger.

We all know Nigeria's potential. It is the largest economy in Africa. It is set to be the 3rd most populous nation in the world by 2050. It is Africa's largest oil producer. It has fertile land; abundant natural resources; a large internal market; and a young, energetic population, with a deserved reputation for creativity and entrepreneurial spirit.

The UK-Nigeria trading relationship has traditionally been very strong. A number of UK companies are among the longest running international businesses in Nigeria. We are consistently in the top 5 of Nigeria's trade partners. However, we used to be number 1, and the British High Commission in Abuja, and our Deputy High Commission in Lagos, is committed to pushing us back up the list, particularly as the UK embarks upon a new role in the world as we leave the EU.

The growth required to rebuild this relationship cannot only come from the major multinationals – it will be built on SMEs discovering Nigeria's opportunities, building new partnerships and bringing in expertise to super-charge existing capacity.

We believe in the potential that Nigeria possesses, and we believe it can be harnessed to create jobs and prosperity. But business is not charity. Investors looking to put their time, energy, and money into new ventures overseas have hundreds of places they could choose. To attract investors will require developing a strong, credible and positive offering, and an enabling approach from the government and government agencies.

Some of this lies with the Federal Government – and we commend their efforts in this regard. The Economic Growth and Recovery Plan sets out an ambitious range of targets for ensuring that Nigeria builds back better from recession. And the 60-day plans for Enabling the Business Environment have already led to some useful reductions in bureaucracy and streamlining of what used to be some cumbersome business processes. More is required – and the UK is engaging on several fronts to support these efforts.

But state level governments also have an important role to play. DFID projects, such as GEMS, offer examples of how States can re-orientate their offer to investors. No two states are the same, but some common themes include: land reform and protection of ownership; active and accessible investment promotion councils; transparency over tax and regulations; as well as the commitment to building productive supply chains and supportive infrastructure.

Initial findings from research we have supported emphasise the opportunity of Niger State, with its significant land-mass, hydro-electric dams, as well as huge potential in agriculture and mineral resources. Niger's shea butter production is famous, of course. But more investment is required to refine production and packaging for an international market.

There have also been positive steps in improving the business environment – with some significant moves up World Bank's Subnational Doing Business Rankings between 2010 and 2014, thanks to building additional capacity, streamlining processes, and improving registration systems. Your Excellency, with your business background, I am sure you will be keen to further improve these rankings.

As with many other states in Nigeria – over-reliance on statutory allocations from the federal level can lead to vulnerabilities. While this is a challenge – it should also be an additional encouragement to take the bold steps necessary to attract private sector investment, development, and growth to diversify activity and enhance revenue generation. That is not to say it will be easy – but I am confident that the detailed analysis, when available, will offer several avenues for further discussion and debate. It will certainly form part of our interactions with UK businesses, and can function as a “calling card” for Niger State in engaging potential investors in a serious conversation about the opportunities available here.

There is also a role for local businesses – which is why we are so pleased to see many of you here with us today. You don't need me to tell you how much work it takes to make a business successful – or of the risks involved in trying to grow in a difficult economic moment. What works in the short term may not work in the long term. Nigeria's great potential will only be achieved through sustainable means. There may be what we call “quick wins” through changing regulations, or through harnessing new, adaptive technologies. Other issues may take longer to tackle in order to build broader prosperity across the states and the country as a whole.

The UK is committed to supporting this – it is why we are here today. We continue to work closely with the federal government on projects that can impact the whole of the country. This includes DFID support to infrastructure planning and management; policy development expertise; and pilot programmes that offer models for success.

We will share the reporting that comes out of our current cooperation with PWC – and we hope that this will be the start of productive discussions, proposals, and action. We look forward to being able to continue this process to attract more UK companies to Nigeria, and indeed here to Niger, to build further our partnerships for prosperity.

[Press release: MPs' outside interests: Committee announces short review](#)

The Committee met today and discussed the subject of MPs' outside interests.

We will make a further submission on 'reasonable limits' for outside interests to the Commons Committee on Standards' on-going [inquiry](#) into the Code of Conduct for MPs. We will be holding a short review to inform our submission. Given the public interest in these issues, we welcome contributions from all interested parties. The Terms of Reference will be available on our [website](#) next week.

It is for the [Advisory Committee on Business Appointments](#), the [Parliamentary Commissioner for Standards](#), and the [House of Commons Committee on Standards](#) to rule on individual cases.

[Green MEP slams government over failure on 'cheap' renewables](#)

23 March 2017

Molly Scott Cato, Green MEP for the South West, has accused the government of failing consumers and the environment over energy policy. The accusation follows new projections from the Department for Business, Energy and Industrial Strategy (BEIS) which estimate that onshore wind and solar will be as cheap or cheaper than gas by 2020 [1]. BEIS now acknowledge an increased role for renewables, particularly due to potential improvements in battery storage. Molly Scott Cato said:

“Having hammered the renewables sector for ideological reasons, the government now discovers that wind and solar are set to become the cheapest ways to generate electricity.

“Government energy policy supposedly seeks to deliver secure, affordable and

low carbon energy. They have failed on all three counts. But in particular we now see that by failing to pursue a transition to renewable energy they have missed the opportunity to provide electricity for the consumer at the lowest cost.”

Two years ago, Dr Scott Cato commissioned a report which concluded that the South West could generate over 100% of its energy needs from a mix of renewable sources and create 122,000 new jobs through a renewable energy transition [2]. She said:

“The UK has some of the best potential for renewable energy generation in Europe. It is clear that renewable energy should form the backbone of our economic strategy post-Brexit. This will not only be good for the economy and for creating thousands of new jobs, it would, by the government’s own belated acknowledgement, be good for consumers too.”
