

PM remarks at the Sir Winston Churchill Leadership Award ceremony: 26 July 2022

President Zelenskyy,

Your Excellency Ambassador Prystaiko,

ladies and gentlemen, it's great to see you here today.

It was at 4 o'clock on the morning of 24th February 2022 that you called me Volodymyr to say that the incredible had happened, that insanity had broken out, and Russian tanks were surging across the frontier of a sovereign independent country in Europe and cruise missiles were exploding all over Ukraine.

And in that moment of supreme crisis, you faced a test of leadership that was, in its way, as severe as Churchill's challenge in 1940.

As the Russians launched their lightning assault on Kyiv, you knew that you were at the top of their target list, and you knew that squads of killers were hunting for you.

And you could have left Kyiv, you could have said – and it would have been hard to contradict you – that the survival of the Ukrainian state required the survival of the President.

But of course Volodymyr you did none of those things: you chose to stay in Kyiv, among the Ukrainian people, just as Churchill stayed in London in 1940.

And when one world leader offered you a way out, you replied "I need ammunition, not a ride" and I think Churchill would have cheered – and he would probably have wept too – because he was often moved to tears at the sheer moral and physical courage you showed in those grim weeks.

Now I would like to think that when Ukraine's tragedy triggered a global outpouring of support, and when dozens of countries came forward to supply your heroic armed forces with weapons, and scores of nations imposed sanctions on Russia, and almost three quarters of the entire membership of the United Nations voted to condemn the invasion, I would like to think this was an inevitable reaction, because never in my lifetime in international affairs has there been a clearer case of right against wrong.

But the truth is that it wasn't inevitable, that reaction wasn't inevitable, and the global wave of solidarity for Ukraine was, in large measure generated by your own personal articulation of the cause.

Your defiance, your dignity, your unfailing good humour has moved millions,

and as you stand against barbarism, you've become a symbol of the heroism of the Ukrainian people.

You've addressed so many parliaments that I've lost count and you brought both sides of the House of Commons to their feet, something that Churchill would surely have envied, and I can imagine his spirit walking with you, silently urging you on, encouraging you through every ordeal, jabbing the way ahead with his walking stick and perhaps marvelling at your superb indifference to physical danger, something that he himself understood.

And like Churchill you've understood that you are not yourself the lion, the Ukrainian people are the lion, but you have been called upon to give the roar, the roar of freedom against tyranny, good against evil, of light against darkness.

And you have delivered that roar magnificently and that's why it was such a huge stroke of good fortune that you should have been in office at this time of crisis for Ukraine and the world.

And inspired by your leadership, I know not just that Ukraine can win but Ukraine will win, and when that day comes, as it will, Ukraine will rise and take its place, as a free sovereign and independent nation.

Thank you Volodymyr for everything you have done and Slava Ukraini.

Our physical separation notwithstanding, it gives me great pleasure Volodymyr to present you with this award.

[PM call with Israeli Prime Minister Yair Lapid: 26 July 2022](#)

Press release

Prime Minister Boris Johnson spoke to Israeli Prime Minister Yair Lapid.

The Prime Minister spoke to Israeli Prime Minister Yair Lapid this afternoon.

He began by congratulating Prime Minister Lapid on his appointment as Prime Minister earlier this month. Prime Minister Lapid thanked the Prime Minister for his ongoing efforts to support the UK-Israel relationship, an international partnership that he said had made enormous progress during the Prime Minister's tenure.

The leaders agreed that ongoing work, including the recent announcement that the UK and Israel have begun negotiations on a new Free Trade Agreement, will take the cooperation between our countries to new heights. The Prime Minister expressed his confidence that the UK-Israel relationship will continue to be of huge importance to his successor.

On the brutality in Ukraine, the leaders both underscored their support for the Ukrainian people. The Prime Minister welcomed Israel's humanitarian efforts in Ukraine, including their provision of field hospitals. He stressed the need for all countries to continue to put pressure on Putin's regime, including through sanctions.

The Prime Minister and Prime Minister Lapid also discussed Iran and agreed on the need to prevent Iran acquiring a nuclear weapon. The Prime Minister stressed that the UK is continuing to encourage Iran to take the deal currently on the table and come back into compliance with the JCPOA nuclear deal.

The Prime Minister concluded the call by saying he will always be a big friend and supporter of both Israel and Prime Minister Lapid.

[Environment Agency convenes National Drought Group](#)

People across the country have been urged to use water wisely to protect water supplies and the environment during the current period of prolonged dry weather.

Today (Tuesday 26 July) the Environment Agency convened the [National Drought Group](#), made up of senior decision makers from Environment Agency, government, water companies, Water UK, the NFU and environmental protection groups including the Angling Trust and Rivers Trust. The group discussed the current situation and agreed actions to protect water resources and the environment in the UK in the weeks ahead.

Following Tuesday's meeting, the National Drought Group's members agreed to continue to work closely together to monitor and manage the current situation, including convening the National Drought Group's water supply and communications sub-groups.

Harvey Bradshaw, Environment Agency executive director for the environment and chair of the NDG, said:

While last week's extreme high temperatures are now behind us and there are currently no plans for restrictions on essential water use, we can all do our bit by reducing unnecessary water consumption and following advice from our water company to ensure this remains the case whilst our rivers are exceptionally low.

We are working very closely with water companies, farmers and other water users to manage the current situation. Today's meeting was an important step in agreeing joint actions to protect our water resources with further dry weather forecasted for August, including ever-closer working to monitor and manage water supplies and the environment.

Environment Agency teams are doing brilliant work across the country monitoring river levels and responding to environmental incidents, as well as enacting the early stages of our drought plans in many parts of England to protect people's access to water and preserve the environment.

Stuart Colville, Water UK Director of Policy, said

Ongoing warm weather in much of the country follows the driest winter and spring since the 1970s.

Water companies have detailed plans in place to manage water resources for customers and the environment, and are doing everything they can, including working closely with government and regulators, to minimise the need for any restrictions and ensure rivers continue to flow.

As we continue to see extremely high demand, we are urging everyone to carefully consider the amount they are using given the unprecedented conditions. The water industry is running a national water saving campaign called Water's Worth Saving that provides the public with helpful hints and tips on how to do their bit with water use in the home and garden.

Current situation

Regulators and water companies are working together closely to manage water levels and take action where needed, including activating different levels of

well-established dry weather plans in the most affected areas.

Most of England has moved into 'Prolonged Dry Weather' status – meaning the EA is now taking precautionary actions to mitigate impacts as hydrological conditions deteriorate and enhancing its monitoring and protection of water resources, along with the water companies.

Nowhere in England is currently considered to be 'in drought' and most water companies are maintaining good reservoir storage for summer demand. If further measures are required, temporary use bans (more commonly known as hosepipe bans) will be determined by individual water companies and drought permits and drought orders by the Environment Agency and Defra respectively.

However, recent abnormally high temperatures have exacerbated conditions resulting from lower-than-normal rainfall so far this year in many parts of England. With the Met Office forecasting potentially several more dry weeks ahead, particularly in the South and East of the country, the EA and water companies are now enacting the early stages of their well-rehearsed and publicly available drought plans and calling on everyone to do their bit in managing water use.

This will become even more vital in the future as we continue to adapt to a changing climate. Projections show that, by 2050, some rivers could have between 50 and 80 percent less water during the summer and summer temperatures are set to be up to 7.4 degrees hotter.

The EA takes a broad range of measures to manage drought risk, with many already in action. These include:

- Managing abstraction licences to balance the needs of users and our natural environment;
- Helping those areas which are the worst affected by prolonged dry weather by operating water transfer schemes that allow rivers to be artificially maintained;
- Applying for Drought orders in order to protect the natural environment, including applying to Defra last week for an order for the [Holme Styes reservoir in Yorkshire](#) to support environmental needs;
- Planning with water companies and ensuring they have and are implementing their drought plans. Every water company in England has a published drought plan available on their website;
- Working with the farming sector to provide greater assistance to farmers in prolonged dry weather areas;
- Reoxygenating water and rescuing fish in distress where river flows are especially low;
- Supporting the Fire and Rescue Service to tackle waste fires and wildfires.

The National Drought Group will continue to work together very closely over the coming weeks and will next meet in August.

Background

- The following organisations attended the National Drought Group today: Environment Agency; Defra; Natural Resources Wales; Department for Levelling Up, Housing and Communities; Ofwat; UKHSA; Natural England; Welsh Government; Met Office; AHDB; Yorkshire Water; Southern Water; Anglian Water; Affinity Water; Severn Trent Water; Thames Water; South West Water; South East Water; South Staffs Water; Northumbria Water; Water UK; National Farmers Union; Angling Trust; Energy UK; Canal and River Trust; Rivers Trust; RSPB; MOSL; Waterwise; SES; Consumer Council for Water; Drinking Water Inspectorate.
- The National Drought Group meets twice yearly (spring and autumn) to assess the water resource situation ahead and any risks to water supply and the environment. It met in March ahead of the spring/summer season and is planned to meet in October this year ahead of the winter season. The group convenes at the early stages of drought (known as prolonged dry weather), and it met regularly through 2018-2020 to manage the last drought.
- The Environment Agency has rescued fish from the River Teme in Shropshire, the Tarrant in Dorset and Derbyshire Lathkill and relocated them down stream. Elsewhere, we have deployed aeration equipment at a number of still water fisheries where dissolved oxygen levels have fallen to critically low levels.

[Excavation company let sediment into water](#)

Press release

A Warwickshire excavation company allowed sediment from a quarry to enter freshwaters in Buckinghamshire.

Sediment in the water of a tributary of Padbury Brook.

AT Contracting and Plant Hire Limited allowed water contaminated with sediment to enter a tributary of Padbury Brook near Barton Hartshorn in May 2018.

As a result, the company has paid £15,000 to the [Berkshire, Buckinghamshire and Oxfordshire Wildlife Trust](#).

The sanction is known as an Enforcement Undertaking. It can be used as an alternative to a prosecution where the offending was unintentional and where the harm to the environment is limited. In this case the [Environment Agency](#) accepted the company's negligence wasn't down to dangerous or foolhardy behaviour.

The Environment Agency was satisfied that AT Contracting had worked quickly to solve the issue and taken full responsibility for the incident.

Enforcement undertakings allow companies and individuals to make good some of the environmental damage they cause, including through a financial contribution to an environmental project. In addition to the £15,000 payment, the company completed a number of other actions. This included stopping the discharge, removing the pollutant from the watercourse and improving water management.

While agreeing to enforcement undertakings, the Environment Agency continues to prosecute organisations and individuals where evidence shows high levels of culpability and serious environment harm.

Andrew Raine, Environment Manager at the Environment Agency, said:

The Environment Agency is an outcome-focussed regulator, seeking to make sure all businesses work within environmental laws.

Human error on the part of AT Contracting led to the sediment being allowed to enter the river.

Following the Environment Agency's intervention, AT Contracting worked quickly to contain the incident. It has since worked to improve its water management systems to prevent this from happening

again in the future.

Members of the public with concerns about pollution should contact the Environment Agency's 24-hour incident hotline on 0800 80 70 60.

[NDA group event highlights important role of supply chain](#)

"A vibrant supply chain is critical" if the NDA group is going to successfully deliver its decommissioning mission, according to Group Chief Executive Officer David Peattie.

David Peattie was speaking as he opened the NDA group's first supply chain conference since 2018.

More than 1,700 people and 300 exhibitors registered for the event last week, held at Telford's International Centre for the first time.

Emma Ferguson-Gould, Group Chief Commercial and Business Development Officer, said:

"The NDA group has a nationally important mission to decommission the UK's earliest nuclear sites in a safe, secure and sustainable way. The involvement, support and innovation that comes from our supply chain is hugely important to us. Last year we spent £1.9 billion with partner companies, representing almost 55% of our £3.5 billion budget."

"That results in more than 5,000 companies supporting our group's mission, with more than a third of external spend last year with small and medium sized enterprises – exceeding our own challenging target. It was particularly pleasing to see all sizes of organisation come along and be part of this fantastic and productive day."

The event is thought to be Europe's largest decommissioning-focused networking event. As well as demonstrating potential innovative solutions to representatives of the group's operating companies, companies have previously gone on to develop relationships and collaborative opportunities which have helped to deliver increased value for taxpayers.

There was also an opportunity to recognise the winners of the 2022 NDA group supply chain awards. Normally announced at the event itself, the decision was taken to [reveal winners online earlier this year](#) due to the delays in hosting

the event. Originally due to be held in 2020, it has been delayed by more than 2 years as a result of the pandemic.

Steve Glasson, Head of Group Commercial Standards, said:

“These awards not only demonstrate how important the supply chain is to our mission, but they also showcase the variety of innovative work being delivered by businesses throughout the UK and beyond on our behalf. We didn’t want to wait to recognise some of the excellent work that has been going on and so made the decision to announce winners online, but it was nice to finally get them on stage and say thank you for the work they’ve done.”

The event is part of NDA’s continued commitment to encourage, support and develop the supply chain for today and for the future.
