

# Outreach events for British nationals in Finland

Published 7 February 2019

Last updated 8 November 2019 [+ show all updates](#)

1. 8 November 2019 New outreach event scheduled in Rovaniemi on 27 November.
  2. 27 August 2019 Address, timing and registration link added for Tampere outreach event.
  3. 20 May 2019 Address confirmed and registration link added for the Lahti event on 5 June.
  4. 29 April 2019 We have added the date and time for the outreach event in Lahti, as well as a link to a summary from the Helsinki meeting.
  5. 11 April 2019 Added date and location for the Helsinki outreach event.
  6. 19 February 2019 Updated information on outreach events in Oulu, Joensuu, Lahti and Helsinki.
  7. 7 February 2019 First published.

# Outreach events for British nationals in Finland

The British Embassy in Helsinki holds meetings across Finland to update British nationals working and living in the country and to answer their questions regarding Britain's departure from the European Union. The events begin with an introduction after which the floor is open for questions.

In our team's continuous effort to reach as many British nationals in Finland as possible, we will be announcing further outreach meetings below.

## Upcoming events in Finland

### Tampere

Date and time: 9 September 2019, at 1700-1800 hrs

Location: G Livelab Tampere, Puutarhakatu 1

Please [register for the event here](#).

### Turku

Date and time: TBC September 2019

### Lappeenranta

Date and time: TBC October 2019

### Joensuu

Date and time: TBC December 2019

## Past events held in Finland

Lahti 5 June 2019

Helsinki 24 April 2019 You can read the summary on our [Facebook page](#)

Oulu 28 February 2019

Jyväskylä 7 February 2019

Helsinki 28 January 2019

Tampere 23 October 2018

Turku 16 October 2018

Helsinki 1 October 2018

Helsinki 25 April 2018

Turku 24 January 2018

## [Hundreds of trees planted in a pilot to help reduce flood risk](#)

Hundreds of trees have been planted as part of the first project to trial natural flood management techniques to help improve protection for the people of Leeds and living near the River Aire.

The pilot site on a working farm at Eshton Beck, Gargrave now has 650 new trees planted by staff and trainees from Yorkshire Wildlife Trust and volunteers.

Yorkshire Wildlife Trust has also worked on three further pilots on the same site, with a whole host of volunteers from the Environment Agency, Leeds City Council, Yorkshire Water, The Conservation Volunteers, Craven Conservation Group and SCAPA, a firm based in Gargrave. They were also helped by students and staff from Leeds University and NVQ trainees from Craven College. The flood alleviation work involved building 66 log and brash leaky dams, planting a further 850 trees, undertaking 0.5ha of woodland management, building a 20m-long log revetment – using timber to prevent bank erosion and installing 200m of fenceline and a water gate to protect the new trees from nearby grazing stock.

The aim is to see how natural techniques can slow the flow of water and reduce the risk of flooding downstream. The trees include dogwood, guelder rose, downy birch, alder, and willow which will be planted along with hedgerows of hawthorn, blackthorn and hazel. Other measures carried out at part of the project include fencing works, creating leaky barriers and woody dams and stabilising river banks. The natural flood management pilot forms part of the Leeds Flood Alleviation Scheme, led by Leeds City Council in partnership with the Environment Agency, which has a catchment wide approach to flood risk as it enters its second stage.

This £500,000 pilot programme, funded by Leeds City Council, uses natural methods to slow the flow of water from upstream in the catchment. This includes land management to reduce water run-off, woodland creation to increase tree canopy cover and river and flood plain restoration so that the landscape can hold more water in times of flood.

These pilot sites will allow the team to monitor and research the techniques used to gather evidence and increase their understanding of the benefits they provide for reducing flood risk. The pilot programme will also be used by the Environment Agency and Leeds City Council to develop a co-design approach to working with landowners, tenants, local authorities and other key partners such as the Aire Rivers Trust and the White Rose Forest. This will help to then develop future plans for the catchment.

Working with natural processes to reduce flood risk – known as natural flood management (nfm) – is an important part of managing and reducing flood risk in a sustainable way alongside more traditional engineering solutions. The interventions will also create habitat for wildlife and help regenerate rural and urban areas through tourism.

The second phase of Leeds Flood Alleviation Scheme has a strong focus on natural flood management, with proposals to create new woodland areas which would more than double canopy coverage in the River Aire catchment. It focuses on protecting the Kirkstall corridor, which was badly hit by the 2015 Christmas floods, and areas beyond the city boundary to further reduce the possibility of the river flooding in Leeds.

Chris Milburn, Project Executive at the Environment Agency said:  
“This work at Eston Beck contributes to local flood risk reduction and wider environmental benefits, slowing the flow of water locally and to downstream communities.

Don Vine, conservation officer with Yorkshire Wildlife Trust, said:  
“This has been a great project. We have had support from the landowner and real interest from neighbouring farmers – with so much assistance from so many different volunteer groups; from university students to local NVQ trainees and a Gargrave based corporate group. We have already seen some small changes along the watercourse due to our recent work and we will be monitoring all

these interventions over the next few years to measure impact – not only river flow, but also water quality and wildlife.

## [The VMD email is not working – This issue has now been resolved](#)

The VMD is currently unable to receive or send emails. This also means that automatically generated emails will not be sent. However, the online systems, including the Special Import system can still be accessed and certificates downloaded.

We are working with our service provider to fix this as soon as possible. We apologise for any inconvenience.

If you wish to contact the VMD urgently, please call the switchboard on 01932 336911.
