

[News story: £100 million funding for police to tackle violent crime](#)

This funding will ease policing pressures and will pay for police forces to have more officers available to respond to crime or patrol in communities.

The funding will also be invested in Violence Reduction Units, bringing together a range of agencies including health, education, social services and others, to develop a multi-agency approach in preventing knife crime altogether. The units will be based on models used in Glasgow where homicide rates fell by 54% from 2006/07 to 2015/16.

Chancellor of the Exchequer, Philip Hammond said:

We know action is needed now to tackle knife crime which is blighting communities around the country. That's why I'm announcing today that I've heard the calls from the police and the families affected by this devastating crime, and will make available an additional £100 million to spent over the course of the next year.

This money will be ringfenced to pay for increased police presence and patrolling to make our streets safer. But it will also go further in tackling the causes of this crime by investing in Violent Crime Reduction Units in worst affected areas.

Home Secretary Sajid Javid said:

I am deeply concerned by the rising levels of knife crime that is devastating communities and robbing young people of their lives and futures.

I've been doing everything in my power to ensure we have the strongest possible response in place, but tackling this requires action on many fronts.

Law enforcement plays a key role – and it is clear from speaking to police leaders in recent weeks that they need an immediate increase in resources.

I've listened to their concerns and this £100 million – including £80 million new funding from the Treasury – will allow them to swiftly crack-down on knife crime on the areas of the country where it is most rife.

This is on top of the £970m of additional money that policing is already due to receive from April from the Government and Council Tax.

Today's new funding covers one year, and is made up of £80 million Treasury funding with £20 million from Home Office reprioritisation for the financial year 2019/20.

The majority of the funding will be provided to Police and Crime Commissioners for the seven police forces where serious violence levels are highest, and which make up around 70% of knife crime. Those forces cover London, West Midlands, Merseyside, South Yorkshire, West Yorkshire, South Wales and Greater Manchester.

Final allocations to Police and Crime Commissioners will be confirmed in due course.

Separately, the Home Secretary has committed to tracking the impact that this funding is having and to work with policing to make sure this issue is prioritised and tackled.

This is on top of the £970 million of additional money that policing is already due to receive from April 2019, including additional funding that the Chancellor announced at last year's Budget. Police and crime commissioners have already committed to the recruitment and training of nearly 3,000 extra police officers. Longer-term funding for the police will be confirmed at this year's Spending Review.

[Press release: Tina Malone admits contempt of court](#)

Tina Malone has admitted that she is guilty of contempt of court for publishing information purporting to be of Jon Venables. She has been sentenced to 8 months in prison, suspended for 2 years.

Malone made the admission during the hearing at the High Court relating to her 2018 social media posts containing information, including images, purporting to relate to Jon Venables.

Speaking after the hearing, Solicitor General, Robert Buckland QC MP, said:

"The injunction in this case is intended to both protect the identities of the offenders, but also innocent individuals who may be incorrectly identified as them.

Posting this material online is a very serious matter and can result in a prison sentence. I would urge everyone to think carefully about whether their social media posts could breach the order or amount to any other type of contempt of court."

[News story: Spring Statement 2019: what you need to know](#)

The UK economy continues to grow, with wages increasing and unemployment at historic lows, providing a solid foundation on which to build Britain's economic future, the Chancellor said today (13 March 2019) in his Spring Statement.

With borrowing and debt both forecast to be lower in every year than at last year's Budget, the Chancellor set out further investments in infrastructure, technology, housing, skills, and clean growth, so that the UK can capitalise on the post-EU exit opportunities that lie ahead.

The Chancellor also confirmed that the government will hold a Spending Review which will conclude alongside the Budget. This will set departmental budgets, including 3 year budgets for resource spending, if an EU exit deal is agreed. Ahead of that the Chancellor announced extra funding to tackle serious violence and knife crime, with £100 million available to police forces in the worst affected areas in England and Wales

The Spring Statement is an opportunity for the Chancellor to update on the overall health of the economy and the Office for Budget Responsibility's (OBR) forecasts for the growth and the public finances. He also updates on progress made since [Budget 2018](#), and launches consultations on possible future changes for the public and business to comment on. The Spring Statement doesn't include major tax or spending changes – these are made once a year at the Budget.

Economy

The government's efforts to build a stronger, fairer economy are paying off. The economy remains resilient, and is forecast to continue growing:

- there have been nine consecutive years of growth, and the OBR has forecast further growth every year for the next 5 years
- since 2010, the economy has grown faster than France, Italy and Japan
- the OBR expects inflation to stay close to or on target for the duration of the forecast
- business investment is forecast to start growing again from next year, once businesses have the certainty they need to invest

And employment continues to break records

- since 2010 there are over 3.5 million more people in work, and the OBR forecast employment will increase by a further 600,000 by 2023
- the unemployment rate of 4.0% is the lowest rate since 1975. The OBR forecast it will remain near historic lows over the next five years
- wages are increasing at their fastest pace in over a decade, and are forecast to continue growing faster than inflation, which means more money in people's pockets
- since 2010, there are a million fewer workless households and every region and nation of the UK has higher employment and lower unemployment

Public finances

Thanks to the government's fiscal responsibility, and the hard work of the British public, the public finances have reached a turning point:

- borrowing has already been reduced by four-fifths since 2009-10 and debt has begun its first sustained fall in a generation
- debt fell last year, and is forecast to fall continuously, to 73.0% of GDP in 2023-24, compared to the peak of 85.1% in 2016-17
- the public finances have continued to improve since the autumn. Borrowing and debt are lower in every year of the Spring Statement 2019 forecast than at Budget 2018
- the government is focused on keeping debt falling so as to not burden the next generation. The government is taking a balanced approach, reducing borrowing and debt, while supporting public services, investing in the economy and infrastructure, and keeping taxes low

Tech and the new economy

Budget 2018 included significant additional support for cutting-edge science and technologies that will transform the economy, create highly skilled jobs, and boost living standards across the UK. Today the Chancellor:

- welcomed the Furman review, [an independent review of competition in the digital economy](#), which has found that tech giants have become increasingly dominant. The Chancellor announced that the government will

respond later in the year to the review's calls to update competition rules for the digital age – to open the market up and increase choice and innovation for consumers

- has [written to the Competition and Markets Authority](#) (CMA) asking them to carry out a market study of the digital advertising market as soon as is possible. This was a recommendation of the Furman Review
- committed to funding the Joint European Torus programme in Oxfordshire as a wholly UK asset in the event the Commission does not renew the contract, giving the world-leading experts working at the facility certainty to continue their ground-breaking fusion energy research
- invested £81 million in Extreme Photonics (state-of-the-art laser technology) at the UK's cutting-edge facility in Oxfordshire
- boosted the UK's genomics industry with £45 million for Bioinformatics research in Cambridge
- announced £79 million funding for a new supercomputer in Edinburgh – five times faster than existing capabilities – whose processing power will contribute to discoveries in medicine, climate science and aerospace, and build on previous British breakthroughs including targeted treatments for arthritis and HIV

Open and competitive UK

As the UK leaves the EU, it is vital that the world knows the UK is open for business and attractive to international visitors. At the Spring Statement it was announced that:

- from June 2019, citizens of the US, Canada, New Zealand, Australia, Japan, Singapore and South Korea will be permitted to use e-gates at UK airports and at Eurostar terminals. This will significantly reduce queues and improve the flow of passengers and the overall experience at the UK border
- landing cards will also begin to be abolished from June 2019. This will reduce bureaucracy for travellers and speed up the processing of passengers on arrival in the UK
- research institutes and innovating businesses will benefit from an exemption for PhD-level occupations from the cap on high-skilled visas from this autumn. Overseas research activity will also count as residence in the UK for the purpose of applying for settlement, meaning

researchers will no longer be unfairly penalised for time spent overseas conducting vital fieldwork

Clean growth

The Budget 2018 set out how the government is accelerating the shift to a clean economy, building on the Industrial Strategy, Clean Growth Strategy, and 25 Year Environment Plan. The Spring Statement builds on this commitment:

- to help smaller businesses reduce their energy bills and carbon emissions, the government is launching a [call for evidence on a Business energy efficiency scheme](#) to explore how it can support investment in energy efficiency measures
- to ensure that wildlife isn't compromised in delivering necessary infrastructure and housing, the government will Mandate net gains for biodiversity on new developments in England to deliver an overall increase in biodiversity
- to help meet climate targets, the government will advance the decarbonisation of gas supplies by increasing the proportion of green gas in the grid, helping to reduce dependence on burning natural gas in homes and businesses
- to help ensure consumer energy bills are low and homes are better for the environment, the government will introduce a Future Homes Standard by 2025, so that new build homes are future-proofed with low carbon heating and world-leading levels of energy efficiency
- to explore ways to enhance the natural environment and deliver prosperity, the government will launch a global review into the Economics of Biodiversity
- to give people the option to travel 'zero carbon', the government will launch a call for evidence on Offsetting Transport Emissions to explore consumer understanding of the emissions from their journeys and their options to offset them. This will also look into whether travel providers should be required to offer carbon offsets to their customers
- to help protect critical habitats, the government will support the call from the Ascension Island Council to designate 443,000 square kilometres of its waters as a Marine Protected Area

Education and skills

Ensuring people have the skills that employers need is vital to creating the workforce of the future. The Budget set out steps to equip people with the skills to succeed in the modern economy, and today the Chancellor announced:

- updates to apprenticeship reforms announced at Budget that mean from April 1st employers will see the co-investment rate they pay cut by a half from 10% to 5%, at the same time as levy-paying employers are able to share more levy funds across their supply chains, with the maximum amount rising from 10% to 25%
- to tackle period poverty in schools, the Department for Education will lead work to develop a national scheme in England to provide free sanitary products to girls in secondary schools
- the government has appointed Professor Arindrajit Dube to undertake a [review of the latest international evidence on the impact of minimum wages](#), to inform future National Living Wage policy after 2020

Investing in the future – housing and infrastructure

The government is determined to fix the broken housing market. Building more homes in the right places is critical to unlocking productivity growth and makes housing more affordable. At [Autumn Budget 2017](#), the government set out a comprehensive package of new policies to raise housing supply by the end of this Parliament to its highest level since 1970, on track to reach 300,000 a year on average. The Spring Statement set out further steps to deliver this ambition:

- published a [consultation on Infrastructure Finance](#), seeking views on how the government can best support private infrastructure investment in the context of the UK's changing relationship with the European Investment Bank
- reiterated the government's commitment to publishing a comprehensive National Infrastructure Strategy – the first of its kind – setting out the government's priorities for economic infrastructure and responding to recommendations in the National Infrastructure Commission's National Infrastructure Assessment
- £717 million from the £5.5 billion Housing Infrastructure Fund to unlock up to 37,000 homes at sites including Old Oak Common in London, the Oxford-Cambridge Arc and Cheshire.
- through the Affordable Homes Guarantee Scheme, the government will

guarantee up to £3 billion of borrowing by housing associations in England to support delivery of around 30,000 affordable homes

- further progress on delivering growth in the Oxford-Cambridge Arc including £445 million from the Housing Infrastructure Fund to unlock over 22,000 homes, and a [joint declaration with local partners](#), affirming our shared vision for the Arc
- up to £260 million for the Borderlands Growth Deal, which on top of the £102 million announced recently for Carlisle from the Housing Infrastructure Fund means up to £362 million UK Government funding into the Borderlands area

Spending Review

The Chancellor also confirmed that the government will hold a Spending Review which will conclude alongside the Budget. This will set departmental budgets, including 3 year budgets for resource spending, if an EU exit deal is agreed. As at the past three Spending Reviews, the government will run a Zero-Based Review of capital spending where each programme or project will be scrutinised from the bottom up, ensuring the maximum return for the country. The Spending Review will also have a renewed focus on the outcomes achieved for the money invested – supporting a high-growth economy with public services that work for everyone.
