

# Press release: Record road investment plans in the South West are set to achieve key milestones

Highways England's plans for the improved A303 between Amesbury and Berwick Down will be on show at a series of public events starting on Friday.

The consultation, which runs until 6 April, will outline for the first time initial designs for the scheme and how it will restore the tranquil environment and setting of the Stonehenge monument and surrounding landscape by removing the sight and sound of the road.

Since the last consultation in September, Highways England has continued to work with heritage groups such as the National Trust, Historic England and English Heritage, as well as experts in the field, including the Stonehenge Scientific Committee – a body of leading independent archaeologists – to ensure a new route is built sensitively to the World Heritage Site.

The route has been carefully chosen to avoid monuments and barrow groups as well as avoiding any intrusion on views of the winter solstice from Stonehenge and reconnect the World Heritage Site, which is currently split by the A303.

Highways England is now seeking feedback from the public to help shape the scheme further before they submit an application for a Development Consent Order.

This upgrade is one of five multi-million pound road schemes aimed at boosting the economy, tourism and heritage in the South West which will reach key milestones in the first six months of 2018.

Other key milestones include consultations on the:

- A358 Taunton to Southfields dualling scheme.
- A303 Sparkford to Ilchester.
- A30 Chiverton to Carland Cross.
- A417 Missing Link scheme.

Highways England chief executive Jim O'Sullivan said:

These upgrades in the South West will improve millions of journeys. Each of these milestones in the region is evidence of Highways England delivering major infrastructure upgrades for the whole country.

The upgrades are funded by the Government's £15 billion investment in motorways and main A roads, and being delivered by Highways England.

April will mark three years since Highways England embarked on delivering the Government's Road Investment Strategy, the biggest investment in the country's major roads since the 1970s.

Across the country almost 40 schemes are reaching key milestones in the first half of this year and will join the 18 major projects that have already opened to traffic since April 2015. In addition, a further 16 are currently in construction, the latest of which to start initial works was a major upgrade to the M49 near Bristol.

Statutory consultation for the A303 Stonehenge scheme will offer the public and all interested parties the chance to see the progressed plans, including visualisations of how the new route might look, including the Winterbourne Stoke bypass and initial designs for the junctions along the route.

Following public consultation in early 2017 and further engagement with local communities, heritage groups, archaeologists, historians and engineers, the preferred route was chosen so that the route now closely follows the existing A303 through the World Heritage Site.

For more information on the consultation and public information events, [visit the scheme website](#).

## **General enquiries**

Members of the public should contact the Highways England customer contact centre on 0300 123 5000.

## **Media enquiries**

Journalists should contact the Highways England press office on 0844 693 1448 and use the menu to speak to the most appropriate press officer.

# **[Press release: Oxford flood scheme moves a step closer](#)**

The £120m Oxford flood alleviation scheme, which will reduce flood risk to homes, businesses, and transport in Oxford and the surrounding area, has moved a step closer.

The Oxford flood alleviation scheme partnership has just announced that it has secured the funding for the scheme, which will include at least 5 hectares of new habitat creation, 7 new bridges and 2.6 kilometres of new flood defences.

More than £65m in funding has already been committed by Government. A record

amount of partnership funding totalling over £55m has now been given by a wide range of partners. Investment has been secured from Oxfordshire Local Enterprise Partnership, Thames Regional Flood and Coastal Committee, Oxfordshire County Council, Oxford City Council, Thames Water Utilities and the University of Oxford.

Joanna Larmour, Project Director at the Environment Agency, said:

This is a huge scheme – one of the biggest the Environment Agency is working on – and when complete it will not only reduce flood risk to homes across Oxford but it will also protect vital infrastructure, enabling the city to keep moving during flooding. It will also benefit communities and wildlife in a number of ways, including improving existing public footpaths and creating new habitat for wildlife and improving biodiversity.

Today's fantastic news shows that working in partnership can help us get the best scheme for Oxford. We are very pleased that our partners have recognised the multiple benefits it will bring and helped us secure the funding required to progress the scheme to the next stage.

The scheme will benefit everyone who lives, works in or visits Oxford. As well as reduced property flooding, the railway and Botley and Abingdon roads will be protected keeping the city open for business during future flooding. There will also be fewer flood related electricity, telephone and internet disruptions. The scheme will allow

Oxford's successful economy to continue to thrive and also provide environmental benefits and a longterm green legacy.

County Councillor Yvonne Constance said:

The flood relief channel has been a hope for many people for a long time. Now we are at the stage where it has the funding it needs to be made into a reality there will be thousands of homes and businesses protected from the devastating effects of flooding.

Clearly there is still much work to do, but this funding announcement means we can continue to work in partnership to move forward to the next stage.

Councillor Susan Brown, Leader of Oxford City Council, said:

The Oxford Flood Alleviation Scheme will bring huge benefits to householders in West and South Oxford, and to all parts of the business community. I am delighted that we have been successful in our application for this final tranche of funding.

HM Treasury approved the outline business case for the scheme in November 2017. This detailed that full funding for the scheme had to be committed before it could move to the next stage. This has now been confirmed, thanks to increases in contributions from the scheme partners.

The total amount covers the design and construction costs to deliver the scheme. The project team will now work on the Full Business Case, which will be submitted to HM Treasury later this year. Partners will continue to work together on ongoing negotiations with external companies for future investment in the scheme.

The Environment Agency will submit the planning application for the Oxford flood alleviation scheme in March. It will take approximately 3 years to build the scheme, which is designed to work with the natural floodplain west of Oxford.

---

## [Press release: Knighthood and Damehoods conferred: February 2018](#)

The Queen has been pleased to approve that the honour of Knighthood be conferred upon Timothy Miles Fancourt, QC and that the honour of Damehood be conferred upon Christina Caroline Lambert, QC, on their appointment as Justices of the High Court.

### **Notes for editors**

Timothy Miles Fancourt was called to the Bar in 1987 and took Silk in 2003. He was appointed as a Recorder in 2009.

Christina Caroline Lambert was called to the Bar in 1988 and took Silk in 2009.

## [Press release: Clean Growth top of the agenda for ministerial visit to Teesside](#)

Energy Minister Claire Perry with Tees Valley Mayor Ben Houchen.

The region has the potential to exploit opportunities from future growth industries such as carbon, capture usage and storage (CCUS), district heating and the hydrogen economy.

The UK government has made a firm commitment to regeneration and clean energy production in the Teesside area, with an ambition for 25,000 new jobs and over £1 billion of investment across a 10-year period, and today, the minister spoke about making that a reality.

Energy Minister Claire Perry said:

Today I have seen the exciting opportunities here to regenerate this iconic site, and, crucially, bring skilled jobs and clean growth to the area. I look forward to seeing the development of these proposals to develop and breathe new life into this site.

The government has already invested substantial amounts in the area and the Autumn Budget set out a further £123 million of funding to continue work to secure the site. Today, the minister met Tees Valley Mayor Ben Houchen, the Local Enterprise Partnership, Clean Growth investors, the South Tees Development Company and members of the South Tees Site Company as well as taking a tour of the former steel site at Redcar and Cleveland.

Tees Valley Mayor Ben Houchen said:

Our concentration of industry along the coastline perfectly places the region as the go-to location for green energy proposals such as Carbon Capture and Storage. It is fantastic that government recognises our industrial strengths and has reaffirmed their commitment to developing this transformational proposal. I was delighted to share our ambitious plans with the minister today, and made clear to her that Teesside is ready and waiting to take this forward.

A move to low-carbon, clean energy offers a remarkable economic opportunity for our area and the UK as a whole. Our projects would attract inward investment, create jobs and put Tees Valley at the forefront of the clean energy revolution. Now we need to work constructively with government to push ahead and make these schemes a reality.

The site is of particular interest in the development of carbon capture usage and storage – which aims to capture carbon dioxide emitted from industry and power plants for permanent storage under the North Sea. This game-changing technology and many more exciting projects were discussed as part of today's visit.

Business Minister Richard Harrington was also in Teesside today setting out his vision through a keynote speech to workers, industry and local MPs at

Community Union's Steel Sector Conference. The minister talked about his commitment to steelmaking regions across the UK and the importance of putting the sector at the heart of the UK's Industrial Strategy.

Last year, the government set out its plan for growth and regeneration across the UK with its [Industrial Strategy](#) aiming for an economy that boosts productivity and earning power throughout the UK. A key part of that is growing new jobs, and Teesside has a crucial role to play.

Photos and videos of the visit are available by contacting [gillian.capewell@beis.gov.uk](mailto:gillian.capewell@beis.gov.uk).

## [Press release: New projects see UK space firms tackle global challenges](#)

Improved disaster response in Commonwealth states and tropical disease control are among the goals of 10 new projects involving British space organisations, Science Minister Sam Gyimah announced today. The Industrial Strategy highlights the importance of bringing together the UK's world-class research with business investment to develop technologies and industries of the future that benefit society, as well as our economy. The UK Space Agency's International Partnership Programme uses UK space expertise to deliver innovative solutions to real world problems across the globe. This helps some of the world's poorest countries, while building effective partnerships that can lead to growth opportunities for British companies. The successful projects, worth £38 million in total, are led by a diverse range of organisations from the UK's growing space sector, from large companies such as Inmarsat and CGI, to start-ups such as Guildford-based Earth-i. The UK Space Agency and industry are working together to grow the UK's share of the global space market to 10% by 2030. Science Minister Sam Gyimah said: "The UK's space sector is going from strength to strength. It pioneers new technology and provides jobs for 40,000. Today I can announce that the space sector's capabilities are being put to use to tackle some of the world's biggest challenges. "The UK Space Agency's International Partnership Programme will help developing countries tackle big issues like disaster relief and disease control, while showcasing the services and technology on offer from our leading space businesses." The International Partnership Programme is part of the Department for Business, Energy and Industrial Strategy's (BEIS) Global Challenges Research Fund (GCRF): a £1.5 billion fund from the UK Government, which supports cutting-edge research and innovation on global issues affecting developing countries. There are 22 existing projects already delivering benefits, including a partnership between Inmarsat and the Philippine government to reduce the impact of natural disasters using satellite communications, which was called into action in December and January when tropical storms killed hundreds of people

and displaced tens of thousands more to evacuation centres. The project used British technology and expertise to help relief workers get information in and out of the disaster zones which greatly increase the effectiveness of the response effort, helping them save lives and restore critical infrastructure. Rupert Pearce, CEO of Inmarsat, said: "Inmarsat was originally founded to save lives at sea and we are proud that, almost 40 years later, our robust, reliable satellite communication services are deployed throughout the world to assist following natural disasters and humanitarian crises, wherever they occur. "With the invaluable support of the UK Space Agency, we have been able to pre-equip disaster response teams in the Philippines with vital satellite communications solutions. This meant that when two deadly cyclones hit the country over a two week period, resulting in loss of life and serious damage to terrestrial communications infrastructure, Philippine authorities were able to utilise Inmarsat's mobile connectivity services to assess the damage and identify the needs of those regions most affected." All IPP projects are match-funded by consortium members and international partners to ensure maximum value for money. The programme is fully compliant with Official Development Assistance (ODA) with the Independent Commission for Aid Impact recently reporting that the UK Space Agency had developed robust procedures for ensuring ODA eligibility and was thorough in its ODA compliance screening. The UK Space Agency is also funding five Business Applications Ambassadors to work with industry across the UK. The Agency already supports a network of business incubators and the new ambassadors will advise on business applications and other opportunities in the UK.

Full list of new projects:

1) British Geological Survey, Nottingham: Modelling Exposure Through Earth Observation Routines (METEOR): EO-based Exposure, Nepal and Tanzania Grant: £2.8 million Target countries: Nepal and Tanzania (test countries), rolling out to all 48 Least Developed ODA countries Theme: Disaster Management

At present, there is a poor understanding of population exposure in developing countries, which causes major challenges when making Disaster Risk Management decisions. METEOR takes a step-change in the application of Earth Observation exposure data by developing and delivering more accurate levels of population exposure to natural hazards. Providing new consistent data to governments, town planners and insurance providers will promote welfare and economic development in these countries and better enable them to respond to the hazards when they do occur.

2) Satellite Applications Catapult, Didcot: Space Enabled Monitoring of Illegal Gold Mining Grant: £3.3 million Target country: Colombia Theme: Mining

This project is about improving detection and efficiency in monitoring illegal gold mining in remote forested areas in Colombia. The project will make use of freely available Synthetic Aperture Radar (SAR) data, and incorporate machine-learning techniques to show suspected areas of illegal mining, in a user-friendly web portal. The project will support the promotion of safe and secure working environments for all workers, and a reduction in the health-related effects from the high rates of mercury contamination

associated with illegal mining.

3) EARTH-i Ltd, Guildford: ACCORD Grant: £2.7 million Target countries: Kenya and Rwanda Theme: Agriculture

Coffee is the second most traded commodity globally, with revenues directly benefitting farmers in developing countries. Despite this, in Kenya and Rwanda 67% and 80% of people respectively live in poverty, including most smallholder coffee farmers. Unpredictable weather, pests, diseases, nutrient depletion and other factors limit earning potential by hitting coffee quality and quantity. ACCORD will deliver advice from satellite Earth Observation to help smallholder coffee farmers make significant improvements to crop quality and yield, providing them with access to timely, geo-targeted advice through a simple mobile application. This will allow smallholder farmers to achieve higher incomes for their work, improving quality of life for their families.

4) Rothamsted Research, Harpenden: EcoProMIS Grant: £3.9 million Target Country: Colombia Theme: Agriculture

The EcoProMIS project aims to help Colombian rice and oil palm farmers to improve productivity and stabilise incomes, allowing them to compete globally whilst responding to climate change and producing responsibly. The project uses satellite Earth Observation alongside environmental and crop data to research the impact of crop and ecosystem management on biodiversity, greenhouse gas emissions and productivity. The outcome will be a partnership of farmers, research institutes and industry experts that creates comprehensive sets of crop and ecosystem data. This data will be made freely available for the Colombian partners to improve the environmental, technical and financial efficiency of their processes. It will also provide information to insurance firms, government food processors and further beneficiaries to create income for sustainable knowledge.

5) HR Wallingford, Wallingford: An integrated dengue early warning system driven by Earth Observations in Vietnam Grant: £4.1 million Target Country: Vietnam Theme: Health

This work will provide a tool that enables advance warning of likely dengue outbreaks, allowing public health authorities to mobilise resources to those most in need. The project will also provide forecasts of dengue fever under a range of climate change scenarios. The system will link Earth Observation data with climate forecasting and a land-surface model to predict for the first time the impacts of various elements (such as water availability, land-use, climate), on the likelihood of future dengue epidemics. The dengue forecasting tool will also include a water assessment module, delivering the additional benefit of improving water management in Vietnam's transboundary river basins.

6) Janus TCD, Stourbridge: Improved Situational Awareness In Fisheries (ISAIIF) Grant: £5.5 million Target Country: The Philippines Theme: Illegal Fishing

The ISAIIF project will use satellite technology to help the Philippine

government tackle Illegal, Unreported and Unregulated (IUU) fishing in its waters. This project aims to halt the decline of a fisheries sector that employs more than 4 million people. The project will use a wide variety of data sources, including satellite data to understand the location, time and behaviour of specific vessels at sea. This will be combined with a satellite navigation application with an authentication tool through which Philippine fisherfolk confirm their compliance, creating a new digital barrier to IUU fishers within the supply chain. Outcomes will include better monitoring and enforcement of IUU by the Philippine government, improved safety, security and economic productivity for Philippine fisherfolk, benefits to the Philippine economy, and an improvement in the international reputation of Philippine fisheries.

7) CGI, Leatherhead: Peatland Assessment in SE Asia by Satellite (PASSES)  
Grant: £2 million Target Countries: Indonesia, Malaysia Theme: Forestry

Tropical forest fires affect over 20 million people in South East Asia, leading to significant deteriorations in public health and premature mortalities as well as contributing to global CO2 emissions and other negative environmental impacts. Many fires occur over drained peatland areas. This project will use satellite observations and measurements to map peat condition, even when under a forest canopy. By monitoring water levels and improving hydrology in the peatland areas, the risk of fire can be dramatically reduced. By using freely available observations from satellites through the EU Copernicus programme and use of emerging industrial hosted processing capabilities, PASSES will prove that peatland monitoring is a cost effective way to reduce forest fires.

8) eOsphere Limited, Didcot: SIBELIUs: Improved resilience for Mongolian herding communities using satellite derived services Grant: £1.6 million  
Target Country: Mongolia Theme: Disaster Management / Insurance

Mongolia is a large country with around 30% of its population dependant on livestock herding who are exposed to extreme weather events (dzuds). Dzuds are increasingly exacerbated by climate change and are highly damaging to Mongolia's economy and devastating for the poorest herders. A typical dzud can impact tens of thousands of herders, many of who will lose all their livestock leaving them in extreme poverty, with associated impacts for the wider economy. The SIBELIUs project will provide greater dzud-resilience for herders by providing the Mongolian Research Institute of Meteorology, Hydrology and Environment with new sources of satellite data, plus a geo-spatial database for distributing new and upgraded environmental products to key stakeholders supporting herding communities.

9) United Nations Institute for Training and Research (UNITAR): CommonSensing  
Grant: £9.6 million Target Countries: Fiji, The Solomon Islands, Vanuatu

The overall aim of CommonSensing is to improve resilience towards climate change, including disaster risk reduction, and contribute to sustainable development in three selected Commonwealth Small Island Developing States (SIDS): Fiji, the Solomon Islands and Vanuatu. The project will combine earth observation data to provide stakeholders with access to important information

regarding disaster risks (including disaster risk planning, food security, climate risk and other environmental concerns). This information will be accessible to beneficiaries through a web portal and mobile applications. CommonSensing project will create long-term investment loops, define priorities for future climate funds proposals and ensure a sustainable service-platform, running three years after IPP project end.

10) HR Wallingford, Wallingford: Minimising the risk of tailings dams failures through the use of remote sensing data Grant: £2.7 million Target Country: Peru Theme: Mining

Tailing dams are earth embankments used to store toxic mine waste and effluent which can be more than 100m high. Their rate of failure is high, due to poor design regulations and less rigorous construction methods than for normal water-retaining dams, especially in low-income countries. This project will use Earth Observation and Global Navigation Satellite System technologies to allow for more effective monitoring of the dams and therefore quicker action can be taken to avoid the tailings dams failures. The project will help to reduce damage to ecosystem services downstream of mines upon which many vulnerable communities rely for both their source of water and their livelihoods.
