

Plumber given suspended prison sentence for carrying out unsafe gas work

A self-employed plumber has received a suspended prison sentence after carrying out unsafe gas work in Hampshire and for pretending to be Gas Safe registered.

Ben Craig Siddle, trading as BCS Gas and Plumbing, worked on numerous homes in Hampshire in 2021 and 2022 even though he was not a Gas Safe registered engineer.

Mr Siddle, 24, falsely represented himself as a Gas Safe registered engineer to customers and did not carry out the work to appropriate standards, leaving residents at risk from unsafe gas appliances.

He left two of the properties he worked on in an unsafe condition.

Gas Safe registered engineers were later required to correct and repair installations Mr Siddle had carried out at these properties. At one property on East Cosham Road, Portsmouth, the boiler and flue Mr Siddle installed were deemed immediately dangerous. A boiler Mr Siddle installed at another property on Howard Road, Portsmouth, was classed as at risk. Having been prohibited from further gas fitting work by the Health and Safety Executive (HSE) in July 2021 and between March 2022 to August 2022, Mr Siddle committed further gas installation offences at a house in Stakes Road, Waterlooville.

A HSE investigation found Mr Siddle had falsely presented himself as Gas Safe registered while carrying out gas work at these properties. HSE inspectors found Mr Siddle had failed to comply with a Prohibition Notice issued by HSE which required him to stop carrying out gas work.

HSE guidance can be found at: [Gas – HSE](#)

Ben Craig Siddle, of Hatchmore Road, Waterlooville, Hampshire pleaded guilty to five breaches of Regulations 3(7) and 3(3) and 5(3) of the Gas Safety (Installation and Use) Regulations 2005 and two breaches of Section 33(1)(g) of the Health and Safety at Work etc. Act 1974. He was handed a six-month custodial sentence, suspended for 12 months, ordered to complete 150 hours of unpaid work and pay £5,000 in costs at Portsmouth Magistrates' Court on 18 July 2023.

HSE enforcement lawyer Jon Mack said: "Mr Siddle was a convicted fraudster and rogue gas fitter who had dishonestly and intentionally breached the law with no regard for the safety of his customers or their families. When challenged by one of his customers, a childminder, Mr Siddle had shown her a photoshopped Gas Safe Register entry which he had stolen from an unconnected company, BCS Plumbing & Heating. He repeatedly lied in WhatsApp messages to

another customer.

“Gas work should only be undertaken by someone who is competent and qualified to do so, and that means they have to be on the Gas Safe Register. Every engineer has a unique ID card showing the work they are qualified to undertake, and the public are encouraged to contact Gas Safe Register to check the person undertaking their gas work or if they have any concerns regarding gas work carried out.”

[Company fined after employees diagnosed with life-changing condition](#)

A manufacturing company has been fined following reports that two of its employees had been diagnosed with hand-arm vibration syndrome (HAVS).

The two staff members at Ross & Catherall Limited – a company that manufactures and supplies metal bars for the aerospace and automotive industries – worked at the firm’s Forge Lane site in Killamarsh, Sheffield, South Yorkshire, in 2019.

The two employees carried out a variety of tasks, which included the use of vibrating tools, throughout the company’s manufacturing process.

Both operators used these tools for extended periods of time, over a number of years, without adequate systems in place to control their exposure to vibration.

RIDDOR reports submitted by Ross & Catherall Limited in May 2019 revealed the employees had been diagnosed with HAVS.

The RIDDOR reports prompted a Health and Safety Executive (HSE) investigation.

The HSE investigation found there was no hand-arm vibration risk assessment in place prior to, and at the time of the workers' diagnoses, to identify what level of vibration the operators were exposed to. There were also no control measures in place to reduce exposure levels, with reasonably practicable measures only being implemented following HSE's intervention. Health surveillance was also inadequate. This was not carried out annually and there was no initial health surveillance assessment for new operators. Additionally, referrals were not carried out in a timely manner for those employees displaying symptoms of HAVS.

HSE guidance can be found at: [Hand arm vibration at work \(hse.gov.uk\)](https://www.hse.gov.uk/handarmvibration/)

Ross & Catherall Limited, of Bretby Business Park, Ashby Road, Burton upon Trent, Staffordshire, pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc Act 1974. The company was fined £200,000 and ordered to pay £7605.37 in costs at Derby Magistrates' Court on 17 July 2023.

HSE inspector Lindsay Bentley said: "Those in control of work have a responsibility to assess the risk from exposure to vibration, put in controls to reduce this risk and ensure that health surveillance is adequate to identify symptoms in a timely manner.

"HAVS can be a life-changing condition which impacts all aspects of your life. Prevention of vibration damage is key and there is plenty of guidance available for employers to help them protect their employees' health on the HSE website."

This HSE prosecution was supported by HSE enforcement lawyer Nathan Cook.

[Building Safety Regulator announces first step towards regulating the](#)

building control profession

The Building Safety Regulator has today announced two independent provider schemes for building control professionals to take the first step in becoming registered building inspectors. Registration is a key part of making building control a regulated profession.

The Building Safety Competence Foundation and the Chartered Association of Building Engineers (CABE) have been named as the first organisations to become independent competence assessors for all building control surveyors in England. The competence assessment is part of the pathway for building control professionals to become registered building inspectors.

More than 4,500 practicing building control professionals will need to be assessed and certified by April 2024. This will support them to become a registered building inspector. They will no longer be able to work in Building Control across the whole built environment in England without certification. Registration is required by the Building Safety Act 2022. The register will open in October 2023, with registration mandatory from April 2024, when Building Control will officially become a regulated profession.

From that date (April 2024), individual building control professionals, working for both the private sector and local authorities, will need to have passed an independent competence assessment to operate, and they will be required to be registered on the Building Safety Regulator's register of building inspectors. BSR will provide a programme of support and guidance ahead of registration to help individuals and employers understand what they need to do to meet the requirements, as well as how to register.

As part of the BSR approved independent competence assessment schemes, candidates will be evaluated against the Building Inspector Competence Framework (BICoF) classes 2 – 4 every four years. Assessments include interview and examination pathways and continuous professional development.

The BICoF focuses on the skills, knowledge, experience and behaviours expected of registered building inspectors. BICoF is split into nine interrelated subject areas, which broadly cover technical competence, competent application of knowledge and understanding in core building inspection functions and activities, and management competence.

Dr Gavin Dunn, Chief Executive of CABE, said: "Building control professionals have a vital role in helping to deliver buildings that are safe, sustainable, and accessible to all. CABE is delighted to be able to play its part in supporting professionals to demonstrate their competence and in developing a culture of continuous improvement that will help protect the public interest in the long term. We do not underestimate the challenge in getting the building control profession ready by the April 2024 deadline. It is a huge undertaking, and we are in constant talks with relevant organisations to make this transition as smooth as possible."

The BSCF's Chief Executive Lorna Stimpson said: "Dame Judith Hackitt asked industry for change; she asked for a change of mindset to reprioritise safety, a change of culture and the introduction of measurable competence. Dame Judith challenged industry, and in particular building control to "get on with it, don't wait to be told what to do". The BSCF scheme, which is developed in accordance with the requirements of ISO17024, and is audited and accredited by UKAS, is a robust, impartial and unbiased competency assessment which assesses a building control professional's individual skills, knowledge, ethics and behaviours. The BSCF's model reflects the changes Dame Judith called for and the change our communities deserve. It puts people's safety first and holds up to scrutiny from all, including service users, senior managers and insurers.

We are delighted to have received approval from the Building Safety Regulator to provide independent competence assessments for building control surveyors in England. We have been impressed by the rigour of the BSR's process for acceptance which holds true to Dame Judith's vision of safety above all else, and we are actively encouraging building control professionals to prove their competence and make their application for registration."

HSE's Director of Building Safety, Philip White said: "This is a pivotal moment for the building control profession. It will enable individual building control professionals to have independent recognition of their years of investment in their skills, knowledge and experience. It's also another important step on the path to rebuilding confidence in the profession after Grenfell.

Our advice to those working in building control is to embrace this positive and important change and to begin the process early to avoid ending up in a queue."

Making building control a regulated profession that is required to demonstrate its competency to the Regulator is part of the legacy of the Grenfell Tower fire tragedy.

It is also a crucial component in BSR's work in assuring the public that buildings are designed, built and maintained safely

Notes to editors:

About BSR: The Building Safety Regulator (BSR) is an independent body established by the Building Safety Act, 2022, and is part of the Health and Safety Executive (HSE). We will raise building safety and performance standards and oversee a new stringent regime for high-rise residential buildings, as well as overseeing the wider system for regulating safety and performance of all buildings, and, increasing the competence of relevant regulators and industry professionals.

About HSE: The Health and Safety Executive (HSE) is Britain's national regulator for workplace health and safety. We prevent work-related death,

injury and ill health through regulatory actions that range from influencing behaviours across whole industry sectors through to targeted interventions on individual businesses. These activities are supported by globally recognised scientific expertise.

About CABE: As a professional body CABE bring together members, who work across the life cycle of the built environment, specialising across a wide variety of disciplines. CABE shares knowledge, raises standards and develops professionals, enabling them to meet the highest standards we all expect of them.

About Building Safety Competence Foundation: Created in 2021; the Building Safety Competency Foundation (BSCF) delivers robust competence assessment for public and private sector building control practitioners. The BSCF is a Community Interest Company, working for the public benefit, public safety and consumer protection. The BSCF's mission is to lead cultural change in the construction industry by instilling ethics, elevating competence and raising standards in those responsible for the regulation, design, construction and maintenance of our built environment.

[It's time for farmers to 'think differently about safety' says regulator](#)

A three-year-old child was among 27 people killed in agriculture-related activities in the last 12 months, as Britain's workplace regulator calls for farmers to 'think differently about safety'.

The call for a cultural shift away from poor behaviours comes as the rate of fatal injuries in the sector remains one of the highest of all major industries.

Provisional figures for 1 April 2022 to 31 March 2023 show that of the 27 people killed – 21 were workers with the three-year-old child among six members of the public to lose their lives.

Being killed by an animal (cattle) is the major cause of death in 2022-23. (Vehicle related incidents are the major cause when looking at the 5 year average.)

Although, the number of fatal injuries to workers in the agricultural sector has fallen by around half since the early 1980s, the rate of fatalities, which is based on the number of people at work in the sector, has remained high with little change. The worker fatal injury rate is 21-times higher than the average five-year annual rate across all industries.

The most common causes of death in agriculture have not changed for many years. This year is no different. The five most common causes of work-related death in agriculture are:

- Being crushed or trampled by animals, usually cattle.
- Falling from height
- Being struck by a moving vehicle
- Coming into contact with machinery, during operation or maintenance
- Being struck by an object, such as bales or trees

Older workers, those aged 65 and older, accounted for a third of all worker fatalities.

Publication of the report ([Statistics – Work-related fatal injuries in Great Britain \(hse.gov.uk\)](#)) coincides with the start of Farm Safety Week, which begins today (Monday 17 July) and runs until Friday.

Sue Thompson, Head of Agriculture, Health & Safety Executive, said:

“It is disappointing that yet again so many farming families and communities are left devastated when their loved ones are killed or suffer life changing illnesses caused by work.

“The number of fatalities remains stubbornly high and the rate of workplace fatal injury in agriculture still remains the highest of any sector.

“Agriculture is a vital part of the UK economy and it is not acceptable that it continues to fall short when it comes to managing risk in the workplace. It is all the more tragic that we still see children killed by farming activities. It’s time to think differently and not tolerate this any longer. Children must not be in farm workplace.

“We need everyone to play their part to improve the culture and change the poor behaviours we see far too frequently.”

- Earlier this year HSE launched [‘Your Farm – Your Future’](#) – a website bringing together lots of great advice on using vehicles safely on farms.

“I encourage everyone to think differently about safety, do things the right way and have the courage to ‘call out’ poor practices whenever they are seen.

“Agriculture will continue to be a priority sector for HSE. We are committed to making workplaces safer and healthier and holding employers to account for their actions, as part of our mission to protect people and places.

“Awareness of the hazards and health risks and legal requirements has never been higher. It’s great that Farm Safety Week brings the issue into focus.

“But it’s regrettable that we’re not yet seeing the widespread changes in attitude towards safety, and the improvements in behaviour that will reduce the numbers of people injured or killed.

“Everyone in agriculture has a role to play in making the changes we all want to see. It is only with the support and commitment of each and every farmer that we will see improvement. Together, we can make farming healthier and safer.”

[HSE Media Centre 2023-07-14 14:52:21](#)

A leading workwear company has been fined £400,000 after an employee had the skin ripped off the palm of her left hand.

Sharon Chaplin, 51, was working an evening shift for Johnsons Textile Services Limited at the company’s site in Burbage, Hinckley on 16 December 2021.

The mother of two, from Barwell in Leicestershire, was trying to manually clean a sensor to initiate movement of a conveyor belt, but as she did so, her left hand was drawn into a gap where two conveyor belts meet.

An investigation by the Health and Safety Executive (HSE) found that Johnsons Textile Services Limited had inadequately guarded machinery, did not have a suitable and sufficient [risk assessment for the machinery](#) that caused the injury and inadequate health and safety management systems in place.

Johnsons Textile Services Limited, of Logix Road, Burbage, pleaded guilty to breaching Regulation 11(1) of Provision and Use of Work Equipment Regulations 1998 (PUWER).

The company was fined £400,000 and was ordered to pay £5,919.63 costs at a hearing at Leicester Magistrates Court on 12 July 2023.

After the hearing, HSE inspector Nicholas Moreby said “This injury was easily preventable by applying known standards of machinery guarding and the risk should have been identified. Employers should make sure they properly assess risk and apply effective control measures to minimise the risk from dangerous parts of machinery”.

“The fine imposed on them should underline to all employers that the courts, and HSE, take a failure to follow the regulations extremely seriously.

“We will not hesitate to take action against companies which do not do all that they should to keep people safe.”

This prosecution was supported by HSE enforcement lawyers Karen Park and Nathan Cook.
