

News story: Nuclear Decommissioning Authority appoints David Peattie as Chief Executive Officer

David will be responsible for leading the NDA in the decommissioning and clean-up of 17 legacy nuclear sites across the UK, including Sellafield. He will assume the role from today, 1 March 2017, when the outgoing CEO, John Clarke, will step down after five years in the role.

The appointment was made by the non-executive members of the NDA Board, with the approval of the Business, Energy and Industrial Strategy Secretary of State Greg Clark.

In addition, as announced on 22 December 2016, Stephen Henwood stepped down yesterday (28 February 2017) on completion of his third term of office as NDA Chairman. He is being replaced by Tom Smith who was previously a Non-Executive Director of the NDA.

NDA Chairman Tom Smith said:

David brings with him significant global experience of leadership in the energy, oil and gas industries, and a strong track record in tackling complex commercial and engineering challenges in the UK and internationally.

I am delighted the NDA has secured a new CEO of such calibre and experience and I am looking forward to working with him in driving forward delivery of the vital mission to clear up the UK's nuclear legacy.

I would like to offer warm thanks to retiring Chief Executive John Clarke and would also like to thank Stephen for his excellent stewardship of the NDA over the last 9 years, and wish him well for the future. It has been a pleasure to serve on the board under him.

Energy Minister, Jesse Norman, said:

The NDA carries out essential work decommissioning and cleaning up the UK's nuclear legacy, keeping our citizens safe and secure and protecting the environment. David's considerable experience in roles across the energy sector makes him well-placed to lead the organisation and take this vital work forward.

I would also like to thank Stephen Henwood and John Clarke for their years of service and wish John well in retirement.

David Peattie said:

It is a privilege to have been asked to take on this important role, which is central to delivering the important mission of decommissioning the UK's nuclear legacy.

The NDA, its subsidiaries and Site Licence Companies, have a highly-skilled and focused workforce, and I look forward to working with them to drive forward progress on clearing our sites for future generations.

Prior to taking up his role at the NDA David Peattie was Chief Executive Officer at Fairfield Energy, where he led the successful turnaround of performance of North Sea assets and oversaw the start of the decommissioning project for the Dunlin Alpha Platform.

David began his career at British Petroleum in 1979 as a petroleum engineer and during his 33 years at the company held a number of technical, commercial and senior management positions. His roles at BP included Head of BP Group Investor Relations, Commercial Director of BP Chemicals, Deputy Head of global Exploration & Production, Head of BP Group Planning, and finally as Head of BP Russia where he was responsible for BP's interests in the TNK-BP joint venture as well as its businesses in the Russian Arctic and Sakhalin. In addition, he was BP's lead Director on the board of TNK-BP and Chairman of its Health, Safety and Environment Committee.

David is a Chartered Engineer and Member of Institute of Mining and Metallurgy (Petroleum Engineering).

[News story: Installed: the machine set to clean up Sellafield's most hazardous building](#)

The £100 million Silo Emptying Plant will scoop radioactive waste out of the Magnox Swarf Storage Silo.

The 1960s storage facility has been described as one of the most hazardous buildings in western Europe and contains 10,000 cubic metres of intermediate level waste from the earliest days of the UK's civil nuclear industry.

John Clarke, outgoing NDA Chief Executive, unveiled the machine – the first of three being assembled in the building – at a ceremony yesterday.

He said:

This is an enormous step forward for the Sellafield decommissioning programme.

It is the culmination of 20 years of work to get to the position where we've got the first machine in place that will retrieve waste from these silos.

The machines will sit on rails on top of the silo's 22 vertical waste compartments. Each compartment is big enough to accommodate six double decker buses stacked three high.

Once operational, the emptying machines will be manoeuvred into place over the top of each compartment to scoop out their contents.

The material will then be packed into nuclear skips and sent to modern waste stores at Sellafield, pending final disposal in the UK's Geological Disposal Facility.

The machines will be ready to start retrieving waste in 2018, taking an estimated 20-25 years to complete the task.

Chris Halliwell, head of the Magnox Swarf Storage Silo, said:

This is probably the most complicated and advanced machine ever built at Sellafield.

It has about 13,500 different working parts and its design and concept was first drawn up more than 20 years ago.

Turning that vision into the machine we have today has been a major challenge for the UK's advanced manufacturing and nuclear supply chain.

The process has been hugely challenging because no plans were drawn up for how waste would be taken out of the building when it was built in the 1960s.

The emptying machines were built by engineering firm NES Ansaldo at its Wolverhampton factory, before being dismantled and sent to Sellafield in 23 separate modules.

These modules were lifted one by one into the silo building and then re-assembled in situ.

Chris Halliwell added:

There is no job at Sellafield more important than the one being done by this machine. Emptying the waste from this legacy silo is our number one priority.

It has to be reliable because once it starts taking waste out, the

contamination inside it would make it very difficult to maintain or repair.

The silo took waste from nuclear power stations all over the UK until its closure in June 2000.

Its contents are chiefly made up of magnesium cladding which was stripped from nuclear fuel rods before they were sent for reprocessing.

[News story: Worm bait returns for trial period at Exmoor fishery](#)

The Environment Agency is continuing conservation measures on its Watersmeet and Glenthorne Fishery for the coming season.

Restrictions have been in place on this popular Exmoor fishery since 2014 in response to disease problems affecting adult salmon and sea trout returning to the East Lyn to spawn. Recent monitoring also revealed reduced numbers of young salmon.

Anglers have been allowed to continue fishing for salmon and sea trout on a 'catch and release' basis throughout the season and have been limited to fishing with a fly or spinner only. The use of worms was traditionally allowed from 16 June. However, this method of fishing can be very effective and has been prohibited in recent years to limit the number of fish caught while stocks have been under pressure.

Following discussions with the Lyn Riparian Owners Association and local interest groups, worming is being allowed again on a trial basis this year from 16 June, subject to strict conditions.

Worms will only be allowed when fished on a single circle-patterned hook, no larger than Size 4. A circle hook increases the likelihood a fish is hooked in the jaw where it can be safely removed. This type of hook reduces the risk of 'deep hooking' which can sometimes occur when worming. It also reduces the chances of accidentally catching trout and salmon parr on this method.

All salmon and sea trout must still be released throughout the 2017 season, irrespective of the method used to catch them. As a further conservation measure, anglers will not be allowed to fish with worm at any time in Long Pool.

Mike Holland of the Environment Agency said:

We want fishermen to continue to enjoy their sport on the

Watersmeet and Glenthorne Fishery, but at the same time ensure suitable measures are in place to safeguard migratory fish returning to the river to spawn.

By allowing only circle hooks to be used for worming we hope to maximise the survival chances of any salmon and sea trout caught and released by this method. We'll review the success of this trial at the end of the season.

The brown trout fishery regulations remain unchanged. The full list of fishery regulations can be found printed on the reverse of the permits, purchasable from local agents.

News story: Submarines to support economic and community growth

The MOD is investing hundreds of millions of pounds in developing HM Naval Base Clyde as the Royal Navy Submarine Centre of Specialisation.

This will see all UK attack submarines based in Argyll and Bute by 2020, and the eventual arrival of the Dreadnought class of ballistic submarines.

The development is expected to increase the number of personnel at HMNB Clyde to an eventual population of 8,200, with many choosing to live in the area.

The Memorandum of Understanding (MOU) signed today will see the signatories work together in delivering infrastructure and opportunities for Royal Navy families and local people to live, work and prosper together.

Witnessing the signing was Secretary of State for Scotland David Mundell, who said:

The UK's entire submarine fleet will be based at Faslane by 2020. This will reinforce Scotland's vital role in protecting our country, and guarantee skilled, secure jobs on the Clyde for years to come.

We must ensure this investment in the base is also a catalyst for growth and regeneration in the wider community. Today's agreement will deliver new housing and improved infrastructure, ensuring people in Argyll and Bute benefit directly from hosting the base.

Minister for Defence Veterans, Reserves and Personnel Mark Lancaster, said:

This agreement ensures the investment we are making to upgrade HMNB Clyde, as part of the £1.7bn we are spending to improve military bases in Scotland, will not only help provide our people and their families with more stability and a better environment to work in, but will also help transform the local area, providing skilled jobs and better infrastructure.

Councillor Dick Walsh, Leader of Argyll and Bute Council and Chair of the Argyll and Bute Community Planning Partnership, said:

This agreement is about making the development of HMNB Clyde work for Navy personnel, their families and the communities in Argyll they will be joining. It's about delivering opportunities for new residents and local people to build happy, prosperous lives together. Helensburgh and its surrounding areas offer great benefits as a place to live, work and visit, and we very much look forward to welcoming new Navy friends and neighbours.

Work will focus on key themes which are set out in a Strategic Delivery and Development Framework (SDDF) and include education, economy, community facilities, communication, transportation and housing.

Naval Base Commander, Commodore Mark Gayfer, said:

The Royal Navy is keen to ensure that the local community better understands what it brings to Argyll and Bute.

There are tremendous opportunities for mutual benefit, such as our redevelopment of the Drumfork Club in Helensburgh, building new sports facilities and the UK Government £5m of support for the Council's waterfront redevelopment.

Through its redevelopment HMNB Clyde will grow its staff numbers from 6,800 today to an eventual population of 8,200. The construction phases are expected to support a further 1,000 contractor jobs.

Work on delivering benefits for new Navy families and Argyll communities is already in progress, for example:

- Economy and regeneration: On 18 January 17, Argyll and Bute Council and HMNB Clyde held the first joint economic forum in Helensburgh. Local businesses were invited to hear about the tremendous opportunities available from the expansion of the Naval Base. Following the event the Council is collating findings and developing a plan of action to take forward.
- Housing and Accommodation: The MOD and Council are working with private and social housing sectors to develop options for choice in the housing market.
- Education and training. Argyll and Bute Council has created the role of Service Pupil Adviser to provide advice and support for the large numbers of Armed Forces children in the Helensburgh and Lomond area. This temporary post is funded by the MOD Education Support Fund.

Community Facilities:

- The MOD owned Drumfork Club, situated in Churchill Estate in Helensburgh, is currently being renovated and due to be re-opened mid-2018. The refreshed facility will be open to the entire community and feature an area for registered childcare provision and five multi-purpose function rooms which can be used for organised and semi-organised activities by local community groups and organisations.
- Although many of the Royal Navy facilities in the area have been put in place for use by service personnel, base workers, and their families, the facilities are also made available on a regular basis to local community groups and organisations.
- Communications and engagement. The MOD and Argyll and Bute Council have produced an Armed Forces and Veterans' brochure which will provide information on Argyll and Bute and the various organisations and services available to support the Armed Forces community and their families.
