

[Press release: Newcastle man sentenced for illegal waste operation](#)

A Newcastle man has been handed a suspended prison sentence for running an illegal waste site.

Leonard Sutherland, 77, from Burns Close Pig Farm at Armstrong Street in Callerton, appeared at South East Northumberland Magistrates' Court on Tuesday, 7 February.

It had originally been set for trial, but on his appearance he pleaded guilty to operating a waste site without a permit at Burns Close Pig Farm.

He was sentenced to 10 weeks in prison, suspended for 12 months. He must also clear all waste from the site by 7 April.

Significant amount of waste

On behalf of the Environment Agency, solicitor Simon Crowder told the court that two Environment Officers attended the site on seven different dates between January 2015 and July 2016.

They saw a significant amount of mixed waste on the ground, with new waste noticed on each visit. The waste had been sorted into types, and there was some evidence of burning.

On talking to Sutherland, he said it was someone else who was responsible for putting the waste on his land. This person was spoken to and evidence gathered, but there was no link between his activities and the waste at the site. Sutherland also said he was in poor health.

In March 2015, Sutherland agreed with the Environment Agency that the site would be cleared within two months and waste transfer notes would be provided. The site was not cleared.

The Environment Agency's Andy Rothery, who was involved in the investigation, said after the case:

Sutherland was repeatedly told the waste on his site was illegal and despite being given opportunities to clear it, this didn't happen. Illegal waste activity has a detrimental impact on the community and environment, as well as undermining legitimate businesses.

We'll continue to work hard to ensure enforcement action is taken against those who flout the law.

Press release: New Northumberland fish passes open up stream

Two new fish passes on a Northumberland stream are giving salmon and sea trout easier access to 22km of watercourse.

The work by the Environment Agency and Northumberland Rivers Trust at South Low, in north Northumberland near Berwick, is making it easier for fish to migrate and spawn.

Two large weirs were preventing fish movement upstream, but both weirs have been changed to make it easier for sea trout and salmon to make their way to their spawning grounds.

It follows work to make it easier for fish to pass through Environment Agency tidal gates at the coast, where the sea meets the stream.

Since then, work has been taking place to make it easier for fish to move further upstream.

Upstream weir before it was altered to make it easier for fish migration

The new upstream fish pass after alterations were made to the weir to make it into a rock pass

Easier for fish

Robbie Stevenson, Fisheries Technical Officer with the Environment Agency, said:

We've worked closely with partners to carry out a lot of positive work in this area, to look at issues which might be having an impact on fish populations.

The alterations to the weirs will open up 22km of watercourse for fish and make it far easier for them to travel upstream.

We've worked really hard together with our partners over the years to make dramatic improvements to water quality.

But there is always more we can do and this project at South Low is the sort of work which is taking place right across the North East and the country to protect and enhance our rivers and streams.

The £100,000 project has been part funded by the Environment Agency, supplemented by private landowner contributions and the work carried out by volunteers.

Important fish passes

Peter Kerr, Director of Northumberland Rivers Trust, who was also designer and project manager for this project, added:

We are delighted to have been able to add these two important fish passes by working in partnership.

The contractors, WL Straughan and Son, did an excellent job in some challenging weather conditions, including the floods following Storm Angus.

After we completed the lower of the passes we saw some big sea trout trying to get past the upper weir, so we are confident that the lower one works well and that there are many migratory fish trying to return to the South Low.

The recent completion of the upper pass will now let these fish access many miles of spawning gravels.

Press release: Work begins on major £18 million Newhaven flood defence project

Construction work on the Newhaven flood alleviation scheme started on 3 January 2017, after 2 years of development including consultation with the local community. After a competitive tendering process, the Environment Agency has employed the services of contractors JacksonHyder to carry out design and construction of this scheme.

The Newhaven flood alleviation scheme has been developed in partnership with Lewes District Council, East Sussex County Council, the Coast to Capital Local Enterprise Partnership (LEP) and South East LEP to reduce the flood risk to approximately 431 homes and 387 commercial properties by significantly improving the standard of existing tidal defences in the East Sussex town.

Floods Minister Thérèse Coffey said:

This £18 million flood defence scheme is a great example of our commitment to better protect the Sussex coast from the kind of devastating flooding experienced in 2013.

All along this coastline, communities are thriving and growing. But we understand the region's full potential cannot be realised without tackling flood risk. That's exactly what we're working with our partners to achieve in Newhaven and throughout the country.

Gordon Wilson, Environment Agency Area Flood and Coastal Risk Manager, said:

I am delighted that construction has started and I would like to take the opportunity to thank the Newhaven community for their invaluable feedback and support throughout the design, consultation and planning processes.

In order to improve the current aging flood defences, unavoidably there may be some disruption whilst essential construction work takes place. We always aim to keep any disruption to a minimum and we thank the community in advance for their ongoing support.

When the whole project is complete in 2019, the scheme will reduce the tidal flood risk to hundreds of homes and a significant number of commercial properties in the area, as well as protecting important local infrastructure such as the road network, railway tracks and the train station. This scheme will also support the wider regeneration of Newhaven, helping to bring new investment,

jobs and homes to the area.

Councillor Andy Smith, Leader of Lewes District Council, said:

I am very pleased that work is underway on this hugely beneficial project for the future of Newhaven and its residents.

Most importantly, it will give a high level of protection to homes and businesses as well as the transport network, greatly reducing the risk of a repeat of the 2013 floods which caused widespread damage and upset. In addition, the scheme also supports the wider regeneration of Newhaven and will help to bring new investment, jobs and homes here.

Councillor Rupert Simmons, lead cabinet member for economy at East Sussex County Council, said:

We're delighted that the Environment Agency has started work to improve flood protection for Newhaven. When the scheme is completed it will significantly reduce the risk of flooding, benefitting residents and providing a real boost for businesses in the town.

Councillor Steve Saunders, Town Mayor of Newhaven, said:

I welcome the start of work on these flood defence works by the Environment Agency. This is good news for Newhaven because they will provide much needed protection to local homes, businesses and infrastructure as well as enabling regeneration to take place in the town.

The Coast to Capital LEP and South East LEP are each contributing £1.5 million, as part of their wider commitment to regeneration in Newhaven. This funding has allowed the scheme to start construction in January 2017.

Tony Middleton, chief operating officer at Coast to Capital LEP, said:

It's exciting to see the flood defence project starting to come to life. The LEP has funded this scheme because the construction of the defences will act as a catalyst for the wider regeneration of Newhaven and continue to protect the vital local infrastructure surrounding the area, drawing in new investment, jobs and homes for the area.

Chris Brodie, Chairman, South East Local Enterprise Partnership, said:

South East LEP welcomes this important milestone and is pleased to be able to support this vital project which is important, not only in protecting the existing business community of Newhaven and local infrastructure, but significantly improves future opportunity for investment in new jobs and homes.
