

Researchers given 'a sporting chance' to access unique archive

Gwent Archives will receive over £14,000 of Welsh Government funding to help conserve fragile and damaged items in the club's collections, thanks to a partnership with the National Manuscripts Conservation Trust.

The conservation work will open up access to the fascinating history of one of Wales' first integrated sports clubs, whose origins date back to 1875.

Conservation work will be undertaken on a series of minute books, 28 postcards and 148 letters and telegrams sent to the club by members fighting during the First World War.

Economy Secretary Ken Skates said:

"This unique archive not only provides an insight into Newport's sporting heritage, it also shines a light on the influence of the club on the development of Welsh rugby. The collection will appeal to sporting historians, anyone associated with distinguished former club members, and all those with an interest in the experiences of soldiers during the First World War.

"I am pleased that we, along side the NMCT have supported this project and I hope to see it enjoyed by researchers and sports enthusiasts from Newport and beyond."

Since 2008 the NMCT, in partnership with the Welsh Government, has supported 39 projects and has conserved items and collections of national and international importance held by archives across Wales.

Lord Egremont, Chairman of the National Manuscripts Conservation Trust, said:

"We are delighted that NMCT's collaboration with Welsh Government has once again enabled the preservation of an outstanding collection of material. We were pleased to support an archive that is so important to the history of sport in Wales".

Tony Hopkins, Gwent county archivist said:

"This is a truly exciting project. Newport is a club not only famed for its rugby but one that has had an immense influence on the development of sport in Wales. We are grateful to the NMCT for helping us preserve this unique archive."

Newport Cricket, Athletic and Football Club was formed as the first integrated sports club in Wales. It became Newport Athletic Club in 1895/6, by which time it ran a wide range of sports and many individuals connected with the club had earned distinction in various sports. Richard Mullock represented the club at the formation of the Amateur Athletic Association in 1880. Wyatt Gould hurdled for Great Britain in the 1908 Olympics and played rugby for Newport and two of his brothers captained the Welsh rugby team, one of them being Arthur, the first rugby 'superstar'.

[Welsh and Scottish Ministers to discuss Brexit – Changes must be made to the EU Withdrawal Bill](#)

Welsh Finance Secretary Mark Drakeford and Scotland's Brexit Minister Michael Russell will meet to discuss the UK Government's recently-published EU Withdrawal Bill.

The Scottish Government's Lord Advocate James Wolffe QC and the Welsh Government's Counsel General Mick Antoniw will also attend the meeting.

The meeting will focus on the need to amend the Bill so relevant powers remain with devolved administrations, rather than being taken back by UK Government, as the Bill currently proposes.

Speaking in advance of the meeting, Professor Drakeford said:

"The Welsh Government's position has always been that we agree there is a need for an orderly exit from the EU, but that it needs to be based a set of arrangements that gives certainty to businesses; to our communities and respects the devolution settlement.

"The EU Withdrawal Bill does absolutely none of those things as it is currently drafted and the UK Government cannot expect the support of the devolved administrations on that basis.

"We want to help the UK Government to find a way out of the mess in which it finds itself and we will come to the table constructively to discuss UK frameworks which may be necessary when the UK leaves the EU. This must be done by agreement and not through imposition.

"We are talking about responsibilities which have rested in Cardiff Bay and Edinburgh since 1999. Our model of devolution has drawn

public support through various elections and referenda and therefore cannot simply be reversed with the stroke of a pen in Whitehall.

“I look forward to discussing with Mr Russell today how we can work together to ensure the UK Government respects devolution across the United Kingdom.”

Mr Russell said:

“The European Union (Withdrawal) Bill is quite simply an attack on the hard-won powers of the Scottish Parliament and on the principles of devolution.

“We cannot and will not stand by and let powers in devolved areas be taken by the UK Government. The Bill must be changed to respect devolution and our parliament.

“The Bill does not return powers to the devolved administrations as promised. Instead it imposes new restrictions on the Scottish Parliament and National Assembly for Wales.

“I look forward to discussing how we can protect devolution with Professor Drakeford and our priorities for amending the Bill.

“I hope the UK Government will also enter into negotiations on the Bill on the basis that we are equal partners on an issue that will have a hugely significant impact on the future of our economy and society.”

[Fresh actions set out to treat neurological conditions in Wales](#)

The plan, first published in May 2014 focuses on raising awareness of neurological conditions, ensuring quick diagnosis of patients, providing fast and effective care, and helping people live with their condition. The plan also aims to improve the information available on neurological conditions and treatment; as well as help target research into causes, treatments and cures.

There are more than 100,000 people in Wales affected with a long term neurological condition. Conditions range from cerebral palsy, muscular dystrophy, Parkinson’s disease and multiple sclerosis to epilepsy.

Progress has been made against the priorities originally set in 2013 – 2017 detailed in the Annual Statement of Progress – Neurological Conditions published in March 2017. This includes a reduction in the average time an individual spends in hospital; falling from 6.4 days in 2010-11 to 4.2 days in 2015-16.

The length of stay following an elective admission has also reduced from 3.9 days to 2.2 days; a similar reduction has been seen for emergency admissions, from 9.2 days to 7 days.

Key actions of the updated plan build on the foundations of the previous plan and continue to drive forward the vision for improving neurological services across Wales more effectively and at a greater pace, in conjunction with Health Boards' local vision for their resident population.

Actions include:

- Raising awareness of neurological conditions by involving patients and carers in designing services
- Ensuring timely diagnosis of neurological conditions by calling on Health Boards to provide specialist advice within 24 hours (on 7 day week basis) for those admitted acutely to hospital with a suspected neurological problem
- Making sure those living with a neurological condition have access to care and support as close to home as possible by a flexible workforce with the appropriate level of evidence based knowledge, skill and expertise.

Health Secretary Vaughan Gething said:

“We want to continue to ensure people affected by a neurological condition have timely access to high-quality care, integrated with social services where appropriate, irrespective of where they live and how these services are delivered.

“I’m pleased we have been able to build on previous progress in delivering this plan and develop a new and improved vision to safeguard the future of our services.

“We have already committed to investing £1.2m to improve access to neuro-rehabilitation services in Wales. The neurological conditions implementation group prioritises raising awareness of conditions, including the development of patient reported outcome measures (PROMs) and patient reported experience measures (PREMs) to consistently improve the service.

“We want health boards to use this funding to make tangible differences in the health, wellbeing and independence of people living with long-term neurological conditions.”

Council tax reductions increase thanks to £244m Welsh Government scheme

Last September, Local Government Secretary Mark Drakeford confirmed the Welsh Government would continue to protect vulnerable and low income households by maintaining full entitlements to the Council Tax Reduction Scheme until at least the end of 2017-18.

The decision has ensured almost 300,000 households in Wales continue to be protected from any increase in their council tax liabilities. Of these, 220,000 households pay no council tax at all.

Commenting on the new report, Professor Drakeford said:

“Despite the UK Government cutting our funding by 10%, the Welsh Government has worked with local authorities to secure reductions in council tax for vulnerable and low income households. This has been supported by the £244m we have provided through our local government settlement.

“This is in stark contrast with the situation in England where local authorities have been left to design their own schemes and manage the associated funding shortfall. This has resulted in more than two million low-income households having to pay more of their council tax bills.

“Low-income families in England are now paying on average £169 a year more in council tax than they would have if council tax benefit were still in place.

“We’re ensuring that local authorities in Wales will continue to be shielded from the costs faced by councils in England and those households which need the most support continue to receive it.”

Blindness from diabetes halves in Wales, new research shows

The research, conducted by the diabetic research unit at Swansea University, analysed new certifications for sight loss, and blindness in Wales due to

diabetic eye disease between 2007 and 2015.

The research shows:

- There were 339 fewer new certifications for all levels of sight loss from any cause combined in 2014-15, compared with 2007-08
- There were 22 fewer people with known diabetes with sight loss due specifically to their diabetes. There was a 49% fall in new certifications for severe sight impairment, from 31.3 to 15.8 per 100,000 people
- During this observation period, 52,229 (40%) more people were diagnosed with diabetes in Wales.

Welcoming the research, Public Health Minister, Rebecca Evans said:

“Thanks to our national diabetic retinopathy screening programme, we are now successfully intervening at an early stage to prevent people with diabetes from losing their sight.

“The research shows us that earlier diagnosis of diabetic retinopathy and sight-threatening diabetic retinopathy since the introduction of screening has played a significant role, alongside other measures, such as improved diabetes management with timely onward referral and newer treatments.

“I’d like to pay tribute to all those within the NHS in Wales who have worked so hard in making this possible. This is another fine example of the Welsh NHS making a real difference to people’s lives.”

Dr Quentin Sandifer, Executive Director of Public Health Services and Medical Director of Public Health Wales said:

“We are delighted that this study shows there is such clear benefit for our population in Wales living with diabetes to take up their offer of eye screening.

“Diabetic Eye Screening Wales invites patients registered with diabetes who are aged 12 and older for annual eye screening. We would encourage people living with diabetes to take up the offer when they receive their invitation.

“This is a great example of the NHS working together to improve outcomes for our population and is especially impressive as sight loss has reduced even through the number of people diagnosed with diabetes in Wales has increased over this time.”

Prof David Owens from the Diabetes Research Unit Cymru at Swansea University said:

“It is very rewarding indeed to see, after many years of dedicated research to determine the best method of screening for the presence of diabetic eye disease, that the main objective of reducing the number of new certifications for severe sight loss (blindness) by almost half has been achieved.

“Clearly, early detection and improved treatment for sight threatening diabetic retinopathy has been an essential element in this success, reaffirming the need for all persons with diabetes – from the age of 12 years onwards – to have regular screening.”
