

Queen's Message to mark assumption of Honduran President

World news story

HM Queen Elizabeth II sent the following message to President of Honduras, Xiomara Castro, to mark the beginning of her premiership.

I would like to extend my congratulations to you on your election as President of the Republic of Honduras. I look forward to the warm and enduring relationship between our two countries continuing to flourish during your presidency. I send my good wishes to you and to the people of Honduras. Elizabeth R.

Nick Witthingham, British Ambassador to Honduras, led the UK delegation to the inauguration ceremony in Tegucigalpa on 27 January.

Minister Goldsmith's address to the Forum of Ministers of the Environment of Latin America and the Caribbean

Thank you – it's an honour to be here, at the end of an inspiring trip to Ecuador and Costa Rica, just a few weeks after a similarly inspiring visit to Peru and to Colombia – and to meet many of you here today at the Leticia Pact before COP26.

I could spend hours talking about the mesmerising beauty of this whole region, and the leadership – you really are at the epicentre of global ambition in relation to the biggest challenge that really any of us face.

And it has been wonderful to be able to spend time with friends – Andrea Meza, Carlos Correa, and Gustavo Manrique, three phenomenal leaders – and my new friends from Panama, and I'm looking forward to visit shortly.

You will be pleased to know I won't spend hours talking about the mesmerising beauty of this area.

But I would like to share some thoughts, if I could on, what was achieved in Glasgow, at COP26.

The whole world heard the message from ambitious, nature-rich countries – as well as climate vulnerable nations around the world – and many of those vulnerable countries, and small island developing states.

Prime Minister Mottley spoke powerfully about the urgent need to keep within 1.5 degrees, and to provide greater support for communities that are being devastated by a global crisis that is not of their making.

And the extraordinary Roxana Borda Mamani, a passionate, eloquent young Quechua activist from Peru – who I met when I was out there – spoke so movingly at COP on the need to empower indigenous peoples and local communities.

I can't pretend – and I'm not going to pretend – that we closed the gap between where we are and where we need to be if we're truly going to address these big issues and reverse the degradation of the natural world, and the climate change that threatens us all.

But undoubtedly, we did narrow that gap considerably – and far more, I think, than people had anticipated.

And we built a momentum.

We kept alive the possibility of staying within 1.5 degrees.

90% of the global economy is now signed up to net zero – it was only 30% a year or so ago.

We agreed measures that undoubtedly signal the end of the era of coal – and 2021 was the year that killed-off international public financing of coal power.

And we're accelerating the transition towards renewable energy, including green hydrogen.

We finalised the Paris rulebook – including the all-important Article 6.

And a new ratchet mechanism – which has been under-reported, but is hugely important in my opinion – will help us to keep the pressure year on year.

And I'm delighted that the UK is investing £100m to respond to the critical recommendations of the Taskforce on Access to Finance that we co-chair alongside Fiji.

And although we didn't reach the promised and hugely important \$100bn figure – we are continuing to urge donor countries to make good on that promise as we continue our presidency, and we have a good plan to achieve it and we are optimistic that we will.

But the thing that made this COP different to previous COPs – and I think so important – was that nature moved from the very margins of the debate on climate change into the heart of our response to it.

And that matters because we know – you know better than anyone – that there is no credible pathway to tackling climate change or to achieving net zero that does not involve massive emphasis on protecting and restoring nature.

Indeed, climate change is just one of many devastating symptoms of our reckless and abusive relationship with the natural world.

If you like, climate change is the fever.

And the beauty of backing nature is that doing so allows us to address so many other issues as well – pollution, poverty – even, as we now know, pandemics.

Nature based solutions are undoubtedly the most effective – but they're also the most cost effective, and we need to back them.

And between us, I think we won that argument at COP – and I don't see any going back.

It was the bravery and the leadership that was shown by big-ocean, big-nature countries, many represented here today, that enabled the UK presidency to be as ambitious as we were, enabled us to make – and win – the arguments in favour of protecting and restoring nature.

And for that I'm so grateful to you here today.

The Glasgow commitment to halt and reverse forest loss and land degradation by the end of this decade – by 2030 – was signed by 141 countries representing over 90% of the world's forest cover.

And that declaration is more than just a paper declaration.

It is reinforced by unprecedented levels of public, and private, and philanthropic finance amounting to nearly USD\$20 billion

...and by public commitments from the world's biggest buyers of agricultural commodities – agricultural commodities are responsible for the vast majority of deforestation

...and a similar commitment from the main Multilateral Development Banks, and

financial institutions presiding over assets worth many trillions of dollars – each of them committing to align their purchasing and their portfolios not only with the Paris goals, but with our deforestation goals as well.

28 countries are now working together to break the link between agricultural commodity and deforestation – while also supporting livelihoods and increasing sustainable trade

...and that's been backed up, I'm thrilled to say, with a £500m commitment from the UK

...and is bolstered also by a growing move by consumer countries to introduce due diligence legislation, the sort that we have already introduced in the UK

– designed to help strengthen forest governance around the world and reduce the impact of our own supply chains on other countries.

COP26 also crucially secured nearly \$2bn to support indigenous peoples and local communities to defend their forests.

And there was one indigenous leader at COP, who I had the pleasure of meeting and said, "We've protected 80% of the world's forest biodiversity without any support at all, often in the face of acute danger; can you imagine what we're going to be able to will do with support?"

So working with Indigenous communities will be central to what we do – not least through the commitment that we've made to the Amazon.

The UK made it on the back of my visit to Carlos Correa in Colombia and friends in Peru – we were able to make that commitment to support the extraordinary work that's happening in critical parts of the Amazon, but also through the LEAF coalition which I hope will grow considerably in the coming year.

Now the UK remains presidency of COP until we hand over all of it to Egypt towards the end of this year.

And our commitment is that we will do all we can to inject scrutiny and accountability at every level to ensure those promises are honoured in full – and that we build upon them.

So there's a lot to be done – and I look forward to working with the most ambitious countries in the world, many of them here today.

But we've seen also that even the more reluctant countries, and companies, and indeed institutions are feeling pressure.

They've seen that we are taking albeit small steps, but important the steps, towards shifting the immense power of the market away from destruction, towards resilience, and sustainability, and renewal.

That shift is now happening. But we need more pace, and we need more urgency

– and the only way that’s going to happen is if governments in particular use the levers that are uniquely in their control.

Governments set the rules.

We have the ability and the responsibility to adjust those rules such that pollution, degradation, and waste become an unbearable liability

...and that the market learns to recognise the true value of those natural systems on which we all depend.

This is a critical year for us all.

We’re going to have to work together to ensure all the decisions we take at the various landmark moments this year add up to more than the sum of their parts – and that we put the world genuinely on a road to recovery.

And we’ve got a big opportunity, if we agree a new global agreement on marine litter and microplastics at UNEA, to help accelerate the shift towards more a circular economy

...and a new and ambitious Global Biodiversity Framework at the CBD COP15 – with mechanisms that will enable Parties to be held to account.

And the UK is so proud to be part of this extraordinary, global coalition committed to protecting at least 30% of the world’s land and at least 30% of the world’s ocean, by 2030.

We must all work together to secure that agreement.

Many of you are playing critically important roles, and I’m so grateful to you.

When Costa Rica, and Colombia, and Ecuador, and Panama made their announcement – this extraordinary vision of a new highly protected, highly connected marine reserve, covering a staggering half-a-million km² of ocean

...I can tell you, as someone who was there in COP, cajoling countries, trying to get everyone to raise their ambition, that moment really sparked something good, a green arms race at COP – with countries beyond this continent wanting to try and engage in, and bask in the glory that they could see these four countries were enjoying on the back of their announcement.

It really helped to raise ambition – it helped us – so again, I’m so grateful to you.

It is exactly the ambition that we all need – and the UK committed at COP to supporting their initiative, we made a small, tentative step towards doing so today.

And as I was able to tell my friends in those four countries, the UK will commit £2m to help kickstart the process – but that is the beginning of a longer-term relationship.

And there is no good reason we can't make this the decade that really begins to turn things around – and reconcile our lives with the natural world.

As I met the President of this country, President Alvarado, yesterday I said that is undoubtedly the defining challenge of our age.

And we will all be judged on the basis of whether manage to do that.

So I really look forward to continuing to work with these ambitious countries here in this region.

And Andrea, thank you once again for inviting me, for looking after me over the last couple of days, giving me so much of your time – but much more importantly for the amazing, global leadership that we need now.

Thank you so much.

[Cameroon: UK in Cameroon mobilizes the private sector for Climate Action.](#)

World news story

UK Government's support is part of commitments around COP26 to encourage the private sector transition to a low carbon operating model.

The British High Commission has granted £10,000 as seed funding from the UK Government's Climate Diplomacy Fund to kick-start the Game Changers. The grant will help the Game Changers mobilise stakeholders (co-funders, enablers, volunteers), build relevant capacity and canvass more resources to work towards achieving the goal to reach 1 million Cameroonians within 24 months.

During the high profile Climate Change Commitment Event in Yaounde in January 2022, Government representatives from Cameroon, business groups, companies and diplomatic missions signed the Commitment book to commit to Climate

Action.

Patu Ndango Fen, the Game Changers lead said:

“Engaging the private sector is critical in the fight against climate change and other environmental challenges. They can make important moves to reduce their carbon footprint while providing resources required to scale existing solutions that address these challenges. We are therefore sending a resounding call for action by joining the Game Changers movement and setting the pace for others within the private sector space to follow.”

Dr. Christian Dennys-McClure, British High Commissioner to Cameroon said:

“As the long-term implications of COP26 unfold, businesses, industry and SMEs – as well as banks and funding agencies – are urged to take up and advance ambitious net-zero emissions targets that governments and politicians have not sufficiently achieved so far. This is an opportunity that we must seize.”

“That’s why we’re partnering with Game Changers to trigger private sector climate action in Cameroon by inspiring businesses to engage in low-carbon operating models, support broader climate action, showcase best practices, and motivate a wider audience to take action to reduce their carbon footprint.”

[Boosters provide high level of protection against death with Omicron](#)

Press release

The latest data from the UK Health Security Agency (UKHSA) shows that boosters significantly reduce the risk of death with Omicron.

The [findings show that](#) around 6 months after a second dose of any of the coronavirus (COVID-19) vaccines, protection against death with Omicron was around 60% in those aged 50 and over. However, this increased to around 95% 2 weeks after receiving a booster vaccine dose.

The data continue to show high levels of protection against hospitalisation from the booster. After a Pfizer booster (after either primary vaccination course), vaccine effectiveness against hospitalisation started at around 90%, dropping to around 75% after 10 to 14 weeks.

After a Moderna booster (mRNA-1273) (after either primary vaccination course), vaccine effectiveness against hospitalisation was 90% to 95% up to 9 weeks after vaccination. Longer follow-up data is not yet available and these figures may change with time.

An initial analysis of vaccine effectiveness against the Omicron variant sub-lineage known as BA.2 (designated VUI-22JAN-01 on 19 January), reveals a similar level of protection for symptomatic infection compared to Omicron (BA.1). After 2 doses, effectiveness was 9% and 13% respectively for BA.1 and BA.2, after 25+ weeks. This increased to 63% for BA.1 and 70% for BA.2 from 2 weeks following a booster vaccine.

Dr Mary Ramsay, Head of Immunisation at UKHSA, said:

The evidence is clear – the vaccine helps to protect us all against the effects of COVID-19 and the booster is offering high levels of protection from hospitalisation and death in the most vulnerable members of our society.

The pandemic is not over yet and the vaccine is the best way to increase your protection against the serious consequences of this virus – please book your appointment for your first, second or third vaccine without delay.

Vaccines minister Maggie Throup said:

A booster vaccine is absolutely crucial to topping up your immunity against the Omicron variant.

More than 80% of eligible adults in England have already received their booster and this has allowed us to ease COVID-19 restrictions.

You can book online, visit a walk-in or one of our many pop-up vaccination clinics – please get boosted now.

Over £41 million compensation offered to the Windrush generation

Over £41 million has been paid or offered to the Windrush generation through the Compensation Scheme, the Home Secretary has announced today. Over £35 million has been paid to 940 people.

There have been a number of significant payments:

- 187 people have been offered or paid between £50,000 and £100,000
- 61 people have been offered or paid between £100,000 and £200,000
- 11 people have been offered or paid between £200,000 and £300,000

The statistics also show that about 45% of applications have been concluded and over 25% of applicants have had a payment.

Home Secretary, Priti Patel said:

Since I overhauled the Windrush Compensation Scheme, the Home Office has been able to secure compensation for more people more quickly. £41 million has now been offered to Windrush victims, with more claims being finalised as quickly as possible.

In addition, 13 further organisations across the UK will receive funding through the Windrush Community Fund. The £500,000 fund allows community and grassroots organisations to bid for up to £25,000 to deliver projects to help raise awareness of the Windrush Scheme documentation and Windrush Compensation Scheme.

There were high numbers of Windrush Community Fund applications. The independent grant administrator, Voice4Change-England, and the Windrush Working Group have been working closely with the department on the Community Fund.

Croydon BME Forum have secured funding to create a Windrush digital hub, which will include a website and community app, bringing together a host of different materials including videos, images and maps, with information on the Windrush schemes. They will also hold a series of events to increase distribution of the information and materials.

Rising Stars North West, based in Manchester, will use their funding to raise awareness of the schemes amongst children and grandchildren of the Windrush generation, equipping them with accurate information to give to their family members.

Citizens' Rights Project in Edinburgh will be raising awareness of the

Windrush schemes with organisations working with migrants and vulnerable adults in Scotland. It will aim to reach 20,000 people through regional publicity and will also be hosting a series of seminars about Windrush and inviting around 200 potentially affected people to attend.

Dorota Peszkowska, a Director of the Citizens' Rights Project, said:

We are delighted to have secured funding from the Windrush Community Fund.

We are keen to play our part to help those in our communities in Scotland to get the help they need.

It's so important that everyone eligible for compensation is able to get it, as it could make a big difference to their lives.

We will be delivering this project across Scotland, with the help of our dedicated staff and 56 multilingual volunteers. Online and offline, we will aim to reach all those who may benefit from the Windrush documentation and compensation schemes, in order to restore justice and a sense of belonging to the community. The Citizens' Rights Project will work with local migrant-led organisations and volunteers for six months to raise awareness about the schemes and communities involved.

The first round of funding was allocated in April 2021 and 14 organisations received funding. One of the organisations, Collage Arts in Haringey, received over £23,000 to produce animations and videos which have been promoted on radio and social channels. It was specifically looking to engage a younger audience, empowering them to support older members of the community.

Steve Medlin, Artistic Director from Collage Arts said:

With the Community Fund we have been able to reach and empower Windrush applicants to come forward and apply to the schemes.

Minister Foster recently came to visit and we were able to show him how the money has been used to benefit our community.

We will keep working to make sure we reach as many people affected by the Windrush scandal as possible.

Phase 1 project delivery continues with some unique and innovative projects including links with local museums, infomercials and community events to both engage communities and raise awareness of the Windrush Schemes. [Further information on Phase 1 projects is available.](#)
