

# Farmers given support to tackle water and air pollution from slurry

Farmers in England will soon be able to apply for grants of up to £250,000 to improve their slurry storage, helping them to prevent water and air pollution and make the best of their organic nutrients.

Around half of slurry stores in England are not fit-for-purpose, forcing farmers to spread slurry when there is no crop need, wasting valuable fertiliser and causing preventable air and water pollution. This means many farms can end up failing to comply with their legal obligations for storage and spreading of slurry.

Investing in good slurry management is an important step that farmers can take to protect the environment. Slurry is a valuable source of nitrogen, phosphorus and potassium which can be used to grow crops.

The first round of the Slurry Infrastructure grant, which will be administered by the Rural Payments Agency (RPA) and opens for applications on Tuesday 6 December, will make £13 million available for livestock farmers to build six months of slurry storage capacity.

[Guidance for the grant](#), which will run over multiple years, has been published today, with farmers able to apply for grants of £25,000 – £250,000 towards the cost of slurry stores, covers and supporting equipment. Grants can be used to build, replace or expand storage. They can also contribute towards a range of solutions like lagoons, steel and concrete ring tanks and large slurry bags.

Farming Minister Mark Spencer said:

We know livestock farmers want to invest in slurry systems that support quality food production and protect the environment, but many are put off by high infrastructure costs and difficulty accessing finance.

The Slurry Infrastructure grant will tackle this, helping farmers to invest in future-proof slurry storage that supports thriving farms while cutting pollution and allowing nature to prosper.

When badly managed, the nitrate and phosphate in slurry end up in rivers, streams and the sea and can cause harmful algal blooms which block sunlight and deplete oxygen, causing damage to natural habitats and wildlife. Slurry also releases large amounts of ammonia into the atmosphere, which returns to the land as nitrogen. The build-up of nitrogen causes certain plants to thrive, limiting species diversity and harming vulnerable habitats.

Enlarging and covering slurry stores will help reduce the 60% of nitrate

pollution, 25% of phosphate pollution and 87% of ammonia emissions that come from agriculture. It will also help farmers to cut costs on artificial fertilisers, delivering long-term productivity benefits through improved nutrient management and soil health.

Paul Caldwell, CEO of the RPA, said:

Improving slurry storage offers farmers an opportunity to reduce the environmental impact of their businesses and cut input costs.

We hope this scheme, which is the result of months of work with farmers and industry, will receive a significant number of applications for this first and future rounds.

The grant is the result of months of co-design with farmers and experts from across sectors. It builds on support Defra already provides for slurry equipment and best practice through the Farming Equipment and Technology Fund and Countryside Stewardship, and will offer farmers an opportunity to build storage systems that exceed storage regulations, support spreading regulations, and improve nutrient use on farm.

Full guidance for the grant has been published today before applications open on 6 December. The guidance explains what the grant offers, the scheme rules and how to apply. It also includes resources to help farmers plan their storage and information for Local Planning Authorities. The online application window will run until 31 January 2023. All applicants will be told whether they have been shortlisted for full application.

Depending on demand in the first round, applicants will be prioritised in areas where action is most needed to reduce water and air pollution from agriculture.

**[Increased interest rate on the Court Funds Office special and basic accounts](#)**

Please note that, in response to the increase in the Bank of England base rate on 3rd November 2022, the Lord Chancellor has reviewed the Court Funds Office (CFO) rates of interest payable to clients and has directed that from 18 November 2022 these will change to the following:

- Special Account – increases from 2.25% to 3.00%
- Basic Account – increases from 1.688% to 2.25%

The Lord Chancellor has made this decision to ensure that the running costs of the CFO service can continue to be met and that an increased rate of interest payable to clients can be provided.

If you wish to discuss further, please contact the CFO on 0300 0200 199 or email [enquiries@cfo.gov.uk](mailto:enquiries@cfo.gov.uk)

## [UK Export Finance commits up to £4bn to strengthen UK and Moroccan trade ties](#)

- Up to £4 billion available finance for overseas buyers of UK goods and services will strengthen the trade relationship between the UK and Morocco
- Announcement comes as export credit agency appoints new International Export Finance Executive (IEFE) in Casablanca, Morocco
- Boost for British exporters with a minimum 20% overall contract value provided to UK suppliers with any overseas project financed by UKEF

UK Export Finance (UKEF) has today announced up to £4bn is now available for Moroccan buyers for projects in the region, provided at least 20% of the content is sourced from UK businesses.

To promote UK and Moroccan trade, UKEF has appointed a new International Export Finance Executive (IEFE), based in Casablanca, to help galvanize new opportunities for UK businesses to export to the region. The financing will promote investment between the two nations by helping Moroccan buyers access support to deliver projects, provided that at least 20% of the overall contract value is sourced from UK suppliers.

Morocco offers a range of opportunities for UK businesses, such as potential projects in energy transition, water desalination, and infrastructure, including rail, roads, ports and airports to boost the domestic economy through new transport links.

The announcement comes just weeks after [UKEF announced that it had deployed £2.3 billion in the continent in 2021](#), triple the amount invested between 2018-19. The announcement follows the UK and Morocco celebrating three centuries of shared prosperity in 2021, which marked the 300th anniversary of the first trade treaty between the two nations.

I'm proud that UKEF is playing a leading role in strengthening the historic trade relationship between the UK and Morocco, with on-the-ground presence and support from our International Finance team. UK firms have an opportunity to do more business with Morocco – a country that is seeking to deliver a more sustainable future – and we look forward to supporting projects in the region.

### **The British Ambassador to Morocco, Simon Martin, said:**

It's great news that UKEF now have a dedicated resource here in Morocco. The challenge is now on buyers in Morocco to bring their projects forward. With the support of UKEF we could see a new wave of investment in Moroccan infrastructure, renewables and other sectors. I am excited to see how this develops and looking forward to seeing our partnership with Morocco continue to grow.

The appointment of an IEFE in Casablanca is the latest development in UKEF's drive to expand its global network and generate new business for UKEF and UK businesses. There are currently 18 executives in place across the Americas, South Asia, Asia Pacific and Africa, with plans to increase this number to around 30 in the next year. IEFEs work closely with overseas buyers, financial lenders, His Majesty's Trade Commissioners and British Ambassadors to engage with overseas governments and multinational companies looking to buy from the UK – creating vital trading opportunities for British businesses.

UK Export Finance (UKEF) has billions of pounds in capacity to support

projects in African markets sourcing from the UK and can offer financing in up to 12 African currencies. It can help foreign countries access finance, loans and insurance to make their projects happen, if they commit to sourcing goods and services from the UK.

## [Fisheries and Seafood Scheme \(FaSS\)](#) [funding panel dates announced for 2023](#)

The [Fisheries and Seafood Scheme \(FaSS\)](#) offers grant funding to support food producers across the catching, processing, and aquaculture sectors in England. Focused on helping projects that will boost business resilience and increase sustainability across our world-class fishing industry, this phase of the scheme offers £18 million of funding until March 2025.

Since the relaunch of FaSS earlier this year, over £5 million of funding has been approved by Marine Management Organisation (MMO), supporting over 300 seafood and marine businesses, charities and other organisations in a number of ways, for example: health and safety improvements, business diversification and new forms of income, as well as supporting cooperative activities and advisory services.

The scheme can also support industry through funding projects related to the conservation and restoration of the marine environment, achieving net zero through reducing emissions, and aid participation in co-design and co-management in the sector.

While the scheme is open throughout the year for applications from smaller projects, any projects with a total cost of £150,000 (or more) are considered by a panel. Applications to be considered at these panels should be completed and submitted by the following dates:

**Panel dates:   Deadline to apply:**

23 March 2023	31 January 2023
26 July 2023	31 May 2023
21 November 2023	30 September 2023

Michelle Willis, MMO's Director of Finance & Resources, said: "Since the launch of FaSS, we have seen an excellent uptake in the number of applications submitted and funded. Amongst the most popular have been health and safety and projects relating to shore-based infrastructure.

"Our Grants Team is there to support our fishing industry and I urge any potential applicants to contact them to talk through any questions they might have about FaSS."

Contact the MMO grants team to discuss any potential panel application by calling 0208 026 5539 or emailing [FaSS.queries@marinemanagement.org.uk](mailto:FaSS.queries@marinemanagement.org.uk).

For guidance and information on how to make an application, [visit the Fisheries and Seafood Scheme section](#) of the MMO webpages.

## [UK minister to strengthen ties across the pacific in first overseas visit](#)

- Minister for the Indo-Pacific Anne-Marie Trevelyan will visit Vanuatu and Australia this week.
- She will attend the Conference of the Pacific Community to boost diplomatic links with the region.
- Minister will then travel to Australia for talks on trade and security.

Underlining the UK's commitment to deepening ties with the Pacific Islands, Minister for the Indo-Pacific Anne-Marie Trevelyan will today (23 November) arrive in Vanuatu for her first overseas trip, following her appointment as an FCDO Minister last month.

Minister Trevelyan will hold talks with Vanuatu's Prime Minister Ishmael Kalsakau and Minister of Foreign Affairs Jotham Napat about the priorities of their recently-elected government. As a Commonwealth partner on the front line of climate change, the UK works closely with Vanuatu to strengthen maritime security, climate resilience as well as capacity building in the region.

The Minister will then attend the [12th Conference of the Pacific Community](#) to build closer diplomatic ties with leaders from across the region. Representatives of the 26 countries and territories that constitute the bloc will attend for talks on climate change, development, science and innovation. The region remains critical to delivering on key UK priorities, including securing an open and stable Indo-Pacific, tackling climate change and biodiversity loss.

Many Pacific Islands have small populations and face geographic isolation and vulnerability to natural disasters. Rising sea levels could see some countries uninhabitable within four decades. The UK is working with these small island developing states to build a cleaner, safer and more resilient future, including through the [Blue Planet Fund](#), which will support economic development while protecting nature and increasing climate resilience.

Minister of State for the Indo-Pacific, Anne-Marie Trevelyan, said:

On my first trip as Minister for the Indo-Pacific, I want to

underline the UK's steadfast commitment to the region and how we can work together to bolster global prosperity and security.

The UK will deepen our engagement in the Pacific, a region where we have a close history, many friends, and share the values of sovereignty, territorial integrity and free trade.

Vanuatu is on the front line of the climate emergency, and we are working with them alongside other partners to accelerate global action on tackling climate change.

During the conference, Minister Trevelyan will hold talks with her counterparts from across the Pacific and support their work addressing climate change, security and prosperity.

The UK is working with the region to deliver its 2050 Strategy for the Blue Pacific Continent, which sets out Pacific countries' vision for a cleaner, safer and more resilient future.

While in Vanuatu's capital, the Minister will co-host a dinner with the New Zealand High Commissioner to celebrate women in leadership across the Pacific, alongside Vanuatu's Deputy Speaker Gloria Julia King.

She will also join young volunteers with community group and non-profit organisation Wan Smolbag to hear how they are affected by and adapting to climate change. The group operates across the South Pacific, running programmes to boost youth engagement on education, health and the environment.

Following her visit to Vanuatu, the Minister will travel to Australia, arriving on 25 November. She will attend talks with her Foreign and Defence Ministry counterparts to discuss UK-Australia security and defence cooperation, including the AUKUS agreement.

The Pacific Community (formerly the south Pacific Community and still referred to as SPC) is the principal scientific and technical organisation in the Pacific region, supporting development since 1947. It works in over 20 sectors including climate change, disaster risk management and human rights.

The conference will be the first in-person meeting since UK re-joined as a metropolitan member in 2021. Current UK support to SPC is delivered through the [CSSF-funded Extended Continental Shelf Programme](#).

Members of the Pacific Community are: American Samoa, Australia, Cook Islands, Fiji, France, French Polynesia, Guam, Kiribati, Marshall Islands, Micronesia, Nauru, New Caledonia, New Zealand, Niue, Northern Mariana Islands, Palau, Papua New Guinea, Pitcairn Islands, Samoa, Solomon Islands, Tokelau, Tonga, Tuvalu, United Kingdom, United States, Vanuatu, and Wallis and Futuna.
