

Two superspan gantries installed over M6 in under 10 hours

With a width of some 40m, the gantries stretch across both the north and southbound carriageways and will house the latest technology to keep drivers informed on journeys.

The M6 was closed between junctions 14 (Stafford north) and 15 (Stoke-on-Trent) to enable the huge structures to be installed. The motorway closed at 9pm on Saturday and was due to be open again by 8am on Sunday with both gantries in place.

The gantries had been built off site and were transported to the M6 site on trailers, with an abnormal load escort, from the north-east. On Saturday they were then lowered onto pre-constructed foundations and posts using a specialist 160-tonne crane.

This technique is quicker and less disruptive than building the gantries at the roadside.

M6 super span galleries installation

Highways England Smart Motorway Project Sponsor Peter Smith said:

This is the first time we have attempted to install two superspan gantries in one night on this scheme and it was quite a challenge to get them both put in place and the M6 open by 8am.

Thanks to careful planning and the efforts of the team on the night, everything went smoothly and we were able to get the motorway open shortly after 6am to minimise disruption for motorists.

We appreciate that our work to upgrade this stretch of the M6 can cause some disruption and we are always grateful for people's patience while we carry out such major works which will ultimately mean better and more reliable journeys for road users.

Signs and signals will be fitted to the gantries which will set variable speed limits to help traffic flow more smoothly, close lanes when necessary and provide travel information for drivers.

While the motorway was shut for the installations a series of other works were also carried out to reduce the need for further closures. These included installing signage, technology ducting and cables, drainage, clearing vegetation and undertaking further surveys.

A 17-mile stretch of the M6 is being upgraded into a smart motorway between junctions 13 (Stafford) and 15 (Stoke-on-Trent). The superspan gantries are the largest structures that have to be installed as part of the scheme.

The installation at the weekend follows a similar engineering feat earlier this month when an 800-tonne bridge was removed from over the M53 near Birkenhead. Six giant remote-controlled transporters took out the main section of the bridge to be safely dismantled. Work is now beginning on constructing a new bridge to open next year.

General enquiries

Members of the public should contact the Highways England customer contact centre on 0300 123 5000.

Media enquiries

Journalists should contact the Highways England press office on 0844 693 1448 and use the menu to speak to the most appropriate press officer.

[Alister Jack responds to US tariffs](#) **[August 2020](#)**

Government response

Alister Jack's response to USTR announcement on tariffs in the ongoing Airbus/Boeing dispute

Speaking in response to the USTR announcement on tariffs, Scotland Secretary Alister Jack said:

While I welcome blended whisky and gin avoiding tariffs and the decision to remove them from shortbread, I am extremely

disappointed the United States continues to punish single malt whisky and cashmere.

I share the Scotch Whisky Association's very real concerns over what this will mean for our most famous product. Whisky is a cornerstone of Scotland's economy, employing around 11,000 people, many in rural areas. It is one of our greatest exporting success stories, worth more than \$1.5 billion last year in the US alone.

The UK Government has petitioned the highest levels of the US administration, including the President, on this and we will continue to do so until this is dropped.

We have provided significant support for the industry in the last two budgets through the freeze on spirit duty and we will continue to work with them to promote Scotch whisky across the globe.

International Trade Secretary Liz Truss said:

In Washington DC last week I met my opposite number Bob Lighthizer, the US Trade Representative, to warn against new tariffs being imposed on great British products like gin and blended whisky. I am pleased that the US has not applied these additional tariffs, and welcome the decision to lift tariffs on shortbread.

However, the announcement does not address tariffs that already exist on goods like single malt Scotch whisky. These tariffs damage industry and livelihoods on both sides of the Atlantic and are in nobody's interests. I am therefore stepping up talks with the US to remove them as soon as possible.

Background

- Liz Truss flew to the US last week and had a series of key meetings with the United States Trade Representative, Robert Lighthizer, and other key members of the US Administration and Congress (spanning 2 – 4 August) to step up free trade agreement talks and protest against tariffs on critical British industry.
- Therefore it is welcome that the US has lifted tariffs on shortbread and decided not to impose additional tariffs on key UK products such as gin and blended whisky, but the continuation of any tariffs on unrelated British industries is completely unnecessary and harms industry on both sides of the Atlantic.
- Liz Truss will now be taking forward further talks with USTR Lighthizer.

Prime Minister announces Appointments Secretary

Press release

The Prime Minister has announced that he has appointed Mr Richard Tilbrook to be his Appointments Secretary.

The Prime Minister has announced that he has appointed Mr Richard Tilbrook to be his Appointments Secretary following the retirement of Edward Chaplin CMG OBE at the end of last year.

Mr Tilbrook will work with the Archbishops' Appointments Secretary on the consultations for diocesan bishop and Crown deanery appointments, attending meetings of the Crown Nominations Commission as appropriate.

Mrs Helen Dimmock in the Cabinet Office remains responsible for parochial appointments where the Crown or Lord Chancellor is patron.

Mr Tilbrook is Clerk to the Privy Council and has been acting as the Prime Minister's Appointments Secretary since January, having previously served as Deputy Appointments Secretary. His earlier civil service career was spent at the Government Communications Headquarters, in the Department for International Development and in the Cabinet Office, where he oversaw the operation of the honours system for a number of years. He is also responsible for advising the Prime Minister on the appointment of Lord-Lieutenants.

Mr Tilbrook is a communicant Anglican, worshipping at St Andrew's, Naunton, in the Diocese of Gloucester. A classicist, he is an alumnus of Queens' College, Cambridge, and the Royal Grammar School, Guildford.

Test and Trace service reaches more than 250,000 people since launch

- NHS Test and Trace service results in line with the recognised metric of success for contact tracing services across the world
- New NHS Test and Trace app to begin initial trial phase to help minimise the spread of coronavirus alongside national and local contact tracing
- New app features include alerts based on postcode, QR check-in at venues, symptom checker and test booking
- Residents on the Isle of Wight, Newham, and NHS Volunteer Responders across England will take part in new trial ahead of national roll-out

The latest statistics from the tenth week of NHS Test and Trace operation show the service is consistently reaching the majority of those testing positive and their contacts, and has reached more than a quarter of a million people since the service launched. The service is reaching over 79% of all those who test positive, and 83.4% of their contacts where contact details were provided, which is in line with the recognised metric of success for contact tracing services across the world.

With a rise of 12% more people getting tested compared to the previous week, the data shows the public health campaign run by NHS Test and Trace to encourage greater uptake of testing for those with possible symptoms of the virus is working. In-person testing at mobile testing units, drive-through and walk-through testing sites continue to deliver results rapidly, with 93.6% of tests returned the next day.

This comes as a new NHS Test and Trace app is launched, with trials starting from today with residents on the Isle of Wight and NHS Volunteer Responders across England, followed shortly by residents in the London borough of Newham, as part of the country's NHS Test and Trace service.

The NHS Test and Trace app has been designed to work alongside traditional contact tracing services and testing, to help people to understand if they are at risk of infection so they can take action to protect themselves and their communities. It uses the latest in security technology and is designed with user privacy in mind so it tracks the virus, not people. England's NHS Test and Trace programme has worked closely with major tech companies, including Google and Apple, scientists within the Alan Turing Institute, medical experts, privacy groups, at-risk communities and teams in countries across the world such as Germany using similar apps, to develop a state-of-the-art app that is safe, simple and secure.

It will log the time and distance a user has spent near to anyone, even if they don't know them, so it can alert them if necessary if that person later tests positive for COVID-19, and help them easily book a free test, and

quickly get their results.

This is a useful addition to the existing NHS Test and Trace service because it will mean you do not need to know the contact details of people for the service to warn them they have been in contact with someone who has tested positive. This means the service can reach more people and further prevent the spread of the virus. This will become more important as people are beginning to return to their normal lives as much as possible, getting on public transport, seeing friends and going to restaurants.

It uses the latest in security technology to protect people's privacy. The system generates a random ID for an individual's device, which can be exchanged between devices to monitor the spread of the virus while rotating frequently to prevent tracking.

Health and Social Care Secretary Matt Hancock said:

It's essential we get the country moving again so people can get back to doing what they love. Our statistics show more people with symptoms are getting tested and NHS Test and Trace reaches the vast majority of people testing positive, and their contacts. We are seeing a significant rise in the number of people with symptoms getting tested, and 90% of people who turn up to be tested get their results by the next day.

We've worked with tech companies, international partners, privacy and medical experts to develop an app that is simple to use, secure and will help keep the country safe.

Building on the feedback from the first phase, I want to thank Isle of Wight residents who will again play a vital national role in fighting this pandemic, joined by residents in Newham, London and our incredible NHS Volunteer Responders. We are hugely grateful to everyone playing their part to rigorously test the new app and provide the foundation for a national roll-out.

Dido Harding, Executive Chair of the NHS Test and Trace Programme, said:

It's really important that we make it as easy as possible for everyone to engage with NHS Test and Trace. By launching an app that supports our integrated, localised approach to NHS Test and Trace, anyone with a smartphone will be able to find out if they are at risk of having caught the virus, quickly and easily order a test, and access the right guidance and advice.

There is no silver bullet when it comes to tackling coronavirus. The app is a great step forward and will complement all of the work we are doing with local areas across the country to reach more people in their communities and work towards our vision of helping more people get back to the most normal life possible at the lowest

risk. I am hugely grateful to the Isle of Wight, Newham and the NHS responders for playing their part.

Simon Thompson, Managing Director of the NHS Test and Trace App, said:

NHS Test and Trace is vital to controlling the spread of coronavirus and this app is designed to give people maximum freedom at minimum risk.

We have worked with some of the most innovative organisations in the World, such as Apple, Google, scientists from the Alan Turing Institute and Oxford University and governments across the world to come up with a state-of-the-art product which works to protect people everyday. It's like NHS Test and Trace in your pocket.

By giving access to the Isle of Wight, Newham and NHS Volunteers first we can make this app even better before rolling out nationwide so the rest of the nation can benefit.

The app has a range of additional, enhanced features that will help to reduce personal and public risk from COVID-19 as part of the end-to-end NHS Test and Trace service:

- alert: letting users know the level of coronavirus risk in their postcode district
- QR check-in: alerting users if they have recently visited a venue where they may have come into contact with someone who later tests positive with COVID-19
- symptoms: allowing users to check if they have coronavirus symptoms and see if they need to order a free test all in one place
- test: helping users book a free test through the app and get results quickly to know whether they have COVID-19.
- isolate: if a user is told to self-isolate, a timer feature will help count down that period and access will be provided to relevant advice

Starting this week, residents on the Isle of Wight and NHS volunteers will receive unique codes via email and post to give them early access to download the app, with residents in Newham, London, getting theirs soon after. The government will work with local partners to ensure users are supported by a wide range of marketing and communication activity. They will be part of a trial period as the NHS Test and Trace programme rigorously evaluates the app in real-world settings to monitor performance and identify improvements ready for national launch.

The app needs to be tested in different ways with different groups that represent the whole of the UK. The Isle of Wight, who have helped develop the app to this point, is a controlled geographical area allowing the service to particularly test features like the QR code check-in and the alert and contact tracing reliability. Newham is an area with a diverse population who might be more at risk to the virus so trialling the app here will ensure that

it meets the needs of a range of different communities. The NHS Volunteer Responders have played a critical role in the response to the pandemic and will help test that the app is ready to scale ahead of national launch.

The app is designed to the highest standards of data privacy and data security. It will not track individuals and does not hold personal information such as name, address or date of birth. For some features, the app may require more information from the user (for example, if you are booking a test) but only if the user gives their explicit consent.

Isle of Wight Council Leader, Dave Stewart, said:

Earlier this year, as part of the response to coronavirus, the island took part in testing the first NHS COVID-19 app.

As a direct result of our incredible, collective effort an improved app has been developed and now, we along with others are being asked to help test this app once again.

We are starting to see our communities open up again, and a return to a more normal way of life. But coronavirus has not gone and until a vaccine or treatment is found, testing and contact tracing is the best way to stop the virus from spreading further and the app is another tool in our toolkit for helping to contain the virus.

Mayor of Newham, Rokhsana Fiaz, said:

We know that Newham has seen some of the most significant impacts of COVID-19 due to the health inequalities and vulnerabilities in our communities.

With the threat of COVID-19 still with us, it's vital we support our residents to keep safe and help others. The app is a welcomed addition to all the measures that our public health team have put in place working closely with our local health partners.

With its easy to use features, the app will be available in different languages and comes with the assurance that personal data stays with the user so that people's privacy is protected.

By taking part in this early phase to trial the app before its national roll-out, we'll be working closely with all sections of our diverse community through our COVID-19 Health Champions network and neighbourhood outreach teams, building on our innovation in creating a unique array of resources to support our community through this unprecedented time of challenge.

Data from the tenth week of operation (30 July to 5 August) of NHS Test and

Trace shows that:

1. 79.7% (3,962) of the people who had tested positive for coronavirus and were transferred to NHS Test and Trace were reached by our contact tracers and asked to share details of their close contacts. This compares to 80.5% in the previous week
2. 74.2% (15,308) of close contacts were reached and advised to self-isolate. This compares to 72.4% in the previous week. Where contact details were provided, NHS Test and Trace reached 83.4%. This compares to 82.3% in the previous week

In total, since 28 May 2020:

1. 53,427 people have newly tested positive for coronavirus in England during this period, with 52,735 transferred for contact tracing – including some people testing positive before contact tracing began
2. 78.2% (41,254) of the people who tested positive for coronavirus and were transferred to NHS Test and Trace were reached by our contact tracers and asked to share details of their close contacts
3. 81.5% (214,890) of close contacts were reached and advised to self-isolate. Where contact details were provided, 89.1% were reached

Testing statistics for the tenth week of operation (30 July to 5 August) NHS Test and Trace shows that:

1. 438,404 people were newly tested for coronavirus (COVID-19) under Pillar 1 (testing in hospitals and outbreak locations) and pillar 2 (national swab testing) in England
2. test results for 88.2% of people tested under pillar 1 were made available within 24 hours of the laboratory receiving the test for processing
3. in-person testing at mobile testing units, and walk-through and drive-through testing sites returned 93.6% of results the next day after the test was taken

When someone reports symptoms through the app, it will detect any other app users that the person has been in significant contact with over the past few days, including unknown contacts such as someone they may have sat next to on public transport. The app will be able to anonymously alert these contacts and provide advice, including how to get a test to confirm whether or not they do have COVID-19.

For those who may not have access to the app, or the ability to use a smartphone, there will be an option to report symptoms and order tests in other ways. Everyone who reports symptoms, including app users, will also be asked to record recent contacts using an online service (or through a telephone interview if they prefer), so that contact tracers can reach all contacts who may be at risk, whether or not those contacts are app users. Contacts will then be alerted either by the app or by email or telephone, advising them to self-isolate or offering public health advice.

Understanding the UK Artificial Intelligence (AI) Labour Market

News story

The government is carrying out research to understand and measure the UK AI labour market. This will help inform future policy and strategy.

The government is undertaking a survey of UK businesses and charities to help understand the UK AI labour market.

The research will examine:

- the skills relating to AI and data science that organisations need
- their approach to employing and training AI and data science professionals
- the issues they face during this process

The research will inform Government policy to promote AI-related skills.

The government has asked Ipsos MORI (an independent research organisation) to carry out the research. This is taking place from August to October 2020.

During this period some organisations will be called by an Ipsos MORI interviewer from their Edinburgh office inviting them to take part.

The government and Ipsos MORI can give the following reassurances about the survey:

- taking part is totally confidential and anonymous for all individuals and organisations
- the survey is not technical and participants do not need any specific AI knowledge
- Ipsos MORI would still like to speak to businesses and charities even if they do not have a dedicated AI or data science team. The interviewer will ask some questions at the start of the survey to find out whether

an organisation is eligible to take part

Who is being invited to take part?

Ipsos MORI and their research partners Perspective Economics have identified businesses and charities to contact for the survey, using a list compiled from various commercial business databases. Organisations were selected if they appear to use AI or data science technology. Organisations will be included in the survey even if AI or data science is only used in a small part of their work.

Within these organisations, Ipsos MORI would like to speak to the person with most knowledge of the organisation's need for AI and data science skills:

- in some organisations this might be the head of a data science team
- in organisations focused on AI and data science it may be the head of recruitment or HR
- in smaller organisations, this person may be the business owner or one of the charity trustees

What does participation involve?

Participation will involve a telephone interview with an interviewer from Ipsos MORI. On average, interviews last around 15 minutes, though the actual interview length may vary depending on the answers that you give.

If you consent to take part in a follow-up interview, these will last around 45 minutes and are expected to take place between November 2020 and January 2021. The interview will take place at a time that is convenient for you.
