[Troika Envoys meet to discuss South Sudan peace process](#)

On Thursday 6 February the three Troika Envoys for South Sudan met in London. The UK Special Representative for the Sudans, Bob Fairweather and the Norwegian Special Envoy Endre Stiansen were joined by the newly-appointed US Special Envoy for South Sudan Stuart Symington.

They discussed the status of the South Sudan peace process, two weeks from the scheduled formation of the transitional government. This critical deadline has now been delayed twice. In their discussions the Envoys emphasised the importance of beginning the transitional period on time and called on the South Sudanese parties to demonstrate the political will needed to move the process forward.

The Envoys welcomed the role the region has played in supporting the process, including recent efforts by South Africa. They were concerned that despite these efforts, the parties have been unable to make sufficient progress on the outstanding issues.

This lack of political will could derail the peace process and undermine the ceasefire, risking a return to violence at a time when the South Sudanese already face a devastating humanitarian crisis.

The Troika agreed that the imminent IGAD (Intergovernmental Authority on Development) and African Union meetings in Addis Ababa may be the last chance to get the process back on track before the deadline. The parties to the agreement, including the incumbent Government, must be prepared to make compromises and agree a way forward on outstanding issues, to enable the formation of an inclusive transitional government.

Their people are watching, impatient to see the peace that their leaders have publicly committed to, but so far have been unwilling to deliver.

The Envoys shared their assessment of the remaining challenges, and discussed possible responses to the scenarios around the 22 February deadline. The Troika remain engaged, and will continue to work with the region for the sake of South Sudan, whose short history has been blighted by conflict, corruption and terrible violence.

Further information

Availability of Lactating Cow Intramammary Antibiotics

Marketing Authorisation Holders (MAHs) have informed the VMD of supply problems with the following lactating cow intramammary antibiotics.

Product	Anticipated Resolution Date (subject to change)
Tetra-Delta Intramammary Suspension (42058/4152)	Product discontinued – no return date
Ubro Yellow Milking Cow Intramammary Suspension (08327/4305)	Product discontinued – no return date

Product	Anticipated Resolution Date (subject to change)
Multiject IMM Intramammary Suspension (02000/4062)	Spring 2022
Combiclav Intramammary Suspension for Lactating Cows (02000/4424)	Autumn 2022
Cefimam LC, 75 mg Intramammary Ointment for Lactating Cows (02000/4387)*	Product discontinued – no return date

The following lactating cow intramammary products have been reported as available for veterinary surgeons to purchase:

Product	Contact Details
Ubropen 600 mg Intramammary Suspension for Lactating Cows (42810/4000)	Boehringer Ingelheim Animal Health UK Ltd 01344 746957 or vetenquiries@boehringer-ingelheim.com
Ubrolexin Intramammary Suspension for Lactating Dairy Cows (08327/4306)	Boehringer Ingelheim Animal Health UK Ltd 01344 746957 or vetenquiries@boehringer-ingelheim.com
Procopen Injector 3g intramammary suspension for cattle (24745/4023)	FORTE Healthcare Limited +353 1 841 7666 or m.scott@fortehealthcare.com
Orbenin L.A. 200mg Intramammary Suspension (42058/4090)	Zoetis UK Limited 0845 300 8034 or customersupportuk@zoetis.com
Synulox Lactating Cow Intramammary Suspension (42058/4143)	Zoetis UK Limited 0845 300 8034 or customersupportuk@zoetis.com
Pathocef 250mg Intramammary Suspension (42058/4094)*	Zoetis UK Limited 0845 300 8034 or customersupportuk@zoetis.com
Cobactan MC Intramammary Suspension for Lactating Cows (01708/4444)*	MSD Animal Health UK Limited 01908 665050 or vet-support.uk@msd.com
Mastiplan LC, 300mg/20mg Intramammary Suspension (01708/4534)	MSD Animal Health UK Limited 01908 665050 or vet-support.uk@msd.com
Albiotic 330mg/100mg Intramammary Solution (30282/4035)	Huvepharma N.V. Rhod.Howells@huvepharma.com Telephone: 07795 520949

Note: * These are defined as a Highest Priority Critically Important Antibiotics for human medicine and, under the [Red Tractor farm assurance scheme](#) for beef and dairy, should be used as a last resort and supported by sensitivity and/or diagnostic testing.

For further details of the supply situation for individual UK-authorized products, please contact the MAH or a [wholesale dealer](#).

During this time, the VMD acknowledges that the availability of veterinary medicines must be balanced with the protection of animal health, human health

and the environment.

The VMD supports and encourages the responsible use of antibiotics. This however, requires veterinary surgeons to take into consideration, not only the most appropriate active substance(s) but also the most appropriate formulation, the posology, the current pattern of resistance in their locality, an awareness of how to reduce selection pressure (considering MICs and clinical breakpoints when available) and adjunctive requirements (such as good biosecurity and husbandry/hygiene, avoiding surgical sepsis etc). If a veterinary surgeon can demonstrate that these steps have been taken, then cascade use of antibiotics may be considered. Antibiotics should not be used to compensate for poor hygiene or inadequate husbandry and biosecurity measures.

Therefore, if veterinary surgeons deem the available products (listed above) unsuitable for their clinical need, and identify and wish to use an alternative product authorised outside of the UK to cover their immediate needs, an [import certificate application](#) may be submitted to the VMD.

Applications should only be submitted after attempts to obtain suitable UK authorised veterinary products have been unsuccessful, and each application will be assessed on its individual merits and justification. Cost or convenience are not considered suitable justification for use of the cascade. Veterinary surgeons are also reminded to consider the likely quantities needed and purchase appropriately.

For additional resources and information on responsible use of antibiotics, please visit [GOV.UK](#).

Last updated 16 November 2021 [+ show all updates](#)

1. 16 November 2021

Albionic 330mg/100mg Intramammary Solution (30282/4035) now available

2. 20 September 2021

Update to anticipated availability for Albionic 330mg/100mg Intramammary Solution to November 2021

3. 26 July 2021

Update to anticipated resolution date for Tetra-Delta Intramammary Suspension and Albionic 330mg/100mg Intramammary Solution

4. 23 June 2021

Updated resolution date for Tetra-Delta and moved Orbenin L.A to available list

5. 16 March 2021

Revised anticipated return date for Albionic June/July 2021

6. 8 March 2021

Orbenin LA moved to the list of products with supply problems; estimated return date of First Half of 2021

7. 26 February 2021

Update to anticipated resolution date for Tetra-Delta Intramammary Suspension

8. 17 February 2021

Update to Synulox Lactating Cow Intramammary Suspension (42058/4143) now available.

9. 16 February 2021

Change to anticipated resolution dates for Multiject IMM Intramammary Suspension, Albiotic 330mg/100mg Intramammary Solution and Combiclav Intramammary Suspension for Lactating Cows.

10. 12 January 2021

Updated return dates for Multiject IMM and Combiclav

11. 21 December 2020

Mastiplan LC, 300mg/20mg Intramammary Suspension (01708/4534) is now available again

12. 18 December 2020

Albiotic 330mg/100mg Intramammary Solution (30282/4035) anticipated resolution date changed to Jan 2021 Mastiplan LC, 300mg/20mg Intramammary Suspension (01708/4534) anticipated resolution date changed to Feb 2021 Cobactan MC Intramammary Suspension for Lactating Cows (01708/4444)* now available

13. 13 November 2020

Updated supply dates for: Cefimam LC, 75 mg Intramammary Ointment for Lactating Cows (discontinued), Albiotic 330mg/100mg Intramammary Solution, Cobactan MC, Mastiplan LC – Combiclav Intramammary Suspension for Lactating Cows

14. 11 November 2020

Update to return dates for Combiclav Intramammary Suspension for Lactating Cows (02000/4424) and Multiject IMM Intramammary Suspension (02000/4062)

15. 21 September 2020

Updated return dates for Synulox LC and Tetra Delta

16. 10 September 2020

Availability of Albiotic 330mg/100mg Intramammary Solution changed to beginning of October 2020.

17. 21 August 2020

Update to the return dates for Mastiplan LC (to Mid September 2020) and Cobactan MC (to End of September 2020)

18. 20 August 2020

Amended Albiotic 330mg/100mg Intramammary Solution (30282/4035) to end of September 2020

19. 18 August 2020

Availability dates amended; Combiclav Intramammary Suspension for Lactating Cows (02000/4424) now November 2020 and Multiject IMM Intramammary Suspension (02000/4062) now January 2021.

20. 12 May 2020

Change to the resolution date of Albiotic 330 mg / 100 mg Intramammary Solution to end of July

21. 1 May 2020

Updated anticipated resolution date for Multiject IMM Intramammary Suspension Combiclav Intramammary Suspension for Lactating Cows added

22. 24 April 2020

Update to date of availability of Albiotic

23. 22 April 2020

Notification of revised anticipated stock date for Synulox LC and Tetra Delta

24. 7 April 2020

New date for the availability of Albiotic 330mg/100mg Intramammary Solution

25. 5 March 2020

Revised date for Albiotic: back in stock at the end of March 2020.

26. 12 February 2020

Change of contact for Forte Health Care; to add Cefimam LC under available products.

27. 11 February 2020

Revised anticipated resolution date for Synulox and Tetra Delta

28. 7 February 2020

First published.

National Apprenticeship Week 2020 in the Foreign Office

The 13th National Apprenticeship Week runs from 3 to 9 February with the aim of raising awareness of apprenticeships and apprentices. The Education and Skills Funding Agency launched the campaign, '#LookBeyond' in 2020 to encourage the celebration of diversity in apprenticeships and the benefits they bring to individuals and their organisations.

This year, the Foreign & Commonwealth Office is encouraging those who may not have previously considered an apprenticeship at the FCO to find out more. As part of the outreach campaign, some of our FCO apprentices have shared their experience of working and learning.

Watch short videos of FCO apprentices talk about their roles

[Shaquielle: Level 3 Business Administration apprenticeship graduate](#)

[Katie: Level 7 Finance apprentice](#)

[Kimberly: Level 3 Business Administration apprenticeship graduate](#)

Read short blogposts from our apprentices

Find out more about apprenticeships at the FCO

In recent years, we have recruited apprentices in Business Administration, Communications, Human Resources, Finance (Accountancy) and Commercial Procurement. FCO apprenticeship opportunities continually evolve and this month, our very first Cyber Security apprentices will join the organisation.

PHE novel coronavirus diagnostic test rolled out across UK

The novel coronavirus diagnostic test developed by Public Health England (PHE) is being rolled out to laboratories across the UK starting on Monday 10 February 2020. The increase in diagnostic capacity from one laboratory in London to 12 labs over the coming weeks, will accelerate the country's testing capabilities.

The UK was one of the first countries outside China to have assured testing capability for the novel coronavirus. At PHE's laboratories in London, it has the capacity to process samples from more than 100 people a day.

Now, to ensure that the country is prepared for further cases and to speed up the time from a sample being taken to a result in the lab, the test will be carried out by trained scientists across England, Wales, Scotland and Northern Ireland. This increases testing capacity to more than 1,000 people a day for England.

When a clinician suspects novel coronavirus, they take samples from the nose, throat and deeper respiratory tract and send them for laboratory testing.

Using the diagnostic test, scientists can look for evidence of the presence of any type of coronavirus and then hone in on specific genetic clues that identify the novel coronavirus associated with this outbreak.

A confirmatory test will continue to be conducted at PHE's Colindale laboratories.

Professor Yvonne Doyle, Medical Director, Public Health England, said:

Once China confirmed that they had identified a novel coronavirus, Public Health England was ready to test potential cases in this country. We have now trained scientists in labs across the UK to conduct the specialist test – ensuring that we are well prepared should we begin to see an increased number of cases across the country.

The roll-out to other parts of the UK is the fastest deployment of a novel test to PHE and NHS labs in recent history, including in the Swine flu pandemic in 2009.

In addition to processing samples from suspected cases in this country, PHE is now working as a reference laboratory for WHO, testing samples from countries that do not have assured testing capabilities.

The laboratories are in the following locations:

- Scotland (2 laboratories)
- Northern Ireland
- Wales
- London
- Cambridge
- Birmingham
- Bristol
- Manchester
- Leeds
- Newcastle
- Southampton
