

News story: Coastguard winchman landing on narrow ledge to rescue two walkers

On 2 November the two walkers raised the alarm at 2.45pm after making a 999 call to the coastguard explaining that they were in a hard to reach location on the western side of Nash Point, five metres above the rising tide.

Llanwit Major coastguard rescue team, Porthcawl RNLi all weather and inshore lifeboats and the St Athan coastguard helicopter were all sent to the scene.

Due to the precarious position they were in, the women were airlifted by the helicopter to the top of the cliff where they were met by the waiting coastguard rescue team. Thankfully they were safe and well and required no medical treatment.

Olly Padbury, chief pilot for the St Athan coastguard helicopter said: 'This mission was an excellent example of how well our coastguard rescue teams and the RNLi work together to protect those on our coastline. The winching was made difficult by the overhanging cliff, but the winch operator did brilliantly to get our winchman to the trapped walkers. It was great to be able to help the walkers, who both did the right thing by calling for help and then staying put.

'The rescue could have been much more dangerous had they tried to climb up the cliff or jumped into the water. The coastline in that area looks so inviting at low tide, but many people get caught out by how fast the tide rises in the Bristol Channel. Hopefully this rescue will remind others to consider the tide before walking along the water's edge.'

HM coastguard duty controller, Aimee Rampton: 'These walkers did exactly the right thing to call the coastguard as soon as they realised they were getting into difficulty.

'It's easy to get caught up in enjoying time on the beach or exploring coastal areas but make sure you keep a careful eye on the sea which can easily catch you out – even those with extensive knowledge of tides.

'By following a few simple safety tips from the UK coastguard, we can make sure that people get the most of their trip to the coast.

'Make sure that you are properly equipped for walking along coastal paths. In particular remember to wear sturdy shoes or boots and check the weather forecast and tidal times before you set out. Carry a mobile phone, and tell someone where you are going and what time you will be home.

'Do not attempt to climb up or down cliffs unless you are properly equipped and trained to do so. Do not attempt to climb cliffs as a short cut back to the top and remember if things do go wrong or if you see someone in

difficulty, don't hesitate to call 999 and ask for the coastguard.'

Press release: Dr Ruth McKernan announces she will leave her post at Innovate UK

During her three years in post, Dr McKernan has led Innovate UK through an extensive programme of work transforming the organisation and positioning it for a successful transition to UK Research and Innovation on 1 April 2018.

Ruth has been instrumental in establishing a clear plan for the organisation, particularly accelerating the growth of small to medium sized enterprises, with the introduction of both the investor accelerator and the innovation loans pilot programmes, and the development of the Industrial Strategy Challenge Fund to help more UK businesses take advantage of emerging technologies.

She has also been a champion for diversity within innovation and during her tenure the 'Women in Innovation' campaign has seen applications from women rise from 14% to 20% in one year.

Dr Ruth McKernan said:

It has been a pleasure to work for Innovate UK since early 2015 and I am extremely proud of what we have accomplished during this time. The introduction of UK Research and Innovation is the natural transition point and an opportunity for a new leader to refine the organisation, and continue to drive business innovation in the UK.

Minister for Universities, Science, Research and Innovation, Jo Johnson said:

I would like to thank Ruth on behalf of the department for her dedicated service to Innovate UK. Ruth has implemented a substantial change programme, improving the structures and processes of the organisation while continuing to drive the benefits of innovation across the UK.

The focus on supporting and growing UK businesses will be continued as we move towards the launch of UK Research and Innovation next

year to ensure the UK remains the destination of choice for research and innovation.

Sir Mark Walport, Chief Executive of UK Research and Innovation said:

It has been a tremendous pleasure to work with Ruth, who has been an excellent leader of Innovate UK. Ruth has been an excellent supporter of UK Research and Innovation and has worked closely on its design and delivery. She is leaving Innovate UK well prepared for its future as a key part of UKRI. I would like to thank Ruth particularly for her contribution to the development of the Industrial Strategy Challenge Fund and wish her all the best in her future endeavours.

The Department for Business, Energy and Industrial Strategy will be launching a recruitment campaign for a successor to Dr McKernan, and the first Executive Chair of Innovate UK, shortly.

[News story: Sexual violence abuses against the Rohingya in Burma](#)

The PM's Special Representative on Preventing Sexual Violence in Conflict, Lord Ahmad of Wimbledon said:

The harrowing reports of mass rape and sexual violence against the Rohingya community people in Burma are deeply disturbing.

As well as rape, gang rape, invasive body searches, and murder, the reports suggest that evidence of these crimes is being deliberately destroyed to stop those responsible being brought to justice. These abuses are a clear human rights violation and must cease immediately.

The Head of Team for the FCO's Preventing Sexual Violence in Conflict Initiative (PSVI) visited the region alongside the UN to meet with survivors, support workers, and government officials. We will also shortly be sending two experts to Bangladesh to provide further support on responding to sexual violence, including on investigating and documenting these abhorrent crimes.

The international community have united come together to deliver a global response to the dire humanitarian situation and human rights

abuses. We also acknowledge the Bangladeshi government have been instrumental in helping those most in need.

Background

The Head of Team for the FCO's Preventing Sexual Violence in Conflict Initiative visited Bangladesh alongside the UN Secretary General's Special Representative on Sexual Violence in Conflict, Pramila Patten. They visited Dhaka and Cox's Bazar and met survivors, service providers and government officials.

The FCO is working with the Stabilisation Unit to deploy two Deployable Civilian Experts (DCE) to Bangladesh to conduct a needs assessment of the extent of reported sexual violence and service provision. The DCEs are experts in gender issues and criminal law, including sexual violence in conflict, they will look at the extent of reported incidents of sexual violence, services being provided to survivors and their families, identify gaps in service provision and make recommendations for the UK Government. Part of the assessment will be a deep dive on investigation and documentation of sexual violence.

The PSVI Team of Experts (ToE) was established in 2012 to strengthen the specialist capabilities that the UK is able to bring to bear on these issues. The ToE is owned by the FCO and housed in the Stabilisation Unit, forming part of their wider Civilian Stabilisation Group, which is a roster of Deployable Civilian Experts. The ToE currently consists of criminal lawyers, policing advisers, gender based violence experts, international investigating officers, training experts, psychosocial experts, social workers, and sexual offences examiners. Each deployment is tailored to local needs and circumstances.

The ToE does not collect evidence or investigate sexual violence. Instead the deployments are designed to complement and reinforce the work of others, including governments UN and NGOs. Since November 2012 we have deployed 74 experts to 13 countries in support of 22 projects. Further information about the ToE can be found [here](#).

Burma is a priority country for PSVI and Women, Peace and Security including in the UK's National Action Plan and Implementation plan which runs from 2014-2017. The National Action Plan enables the Government to articulate our priorities on Women, Peace and Security and coordinate implementation of our work at the national level.

[News story: Sellafield decommissioning](#)

reaches new heights

A chimney on top of the oldest reprocessing plant on the nuclear site, will be crunched away at a rate of 1 metre a week.

The tower will be gone by 2020, resulting in a permanent change to the Sellafield skyline.

The stack sits on top of the First Generation Reprocessing Plant and provided ventilation to a fleet of reprocessing plants.

The 60 year old structure no longer meets modern construction standards, therefore must be removed as a priority.

What went up must come down

At 61 metres tall, on top of a 61 metre building, it was the tallest structure on the site, until a modern replacement was built.

It's position on one of the most congested nuclear sites in the world has made this a complicated and lengthy process.

Conventional demolition techniques like explosives and cranes can not be used in such a crowded, hazardous environment.

Stuart Latham is head of remediation at Sellafield Ltd, he said:

Cleaning up our legacy facilities safely, quickly and cost-effectively is our absolute priority, so are delighted to now see the stack coming down after 4 years of preparation.

Given the structural integrity of the stack, its location in the heart of the site and the fact that this new technique has never been used here before, the planning has been comprehensive. The project demonstrates the challenges of decommissioning the Sellafield site.

We couldn't move a crumb of this chimney without building a modern replacement first, so this has been a complicated project, made easier by working closely with our supply chain.

Safety is the number one priority, so thorough testing has helped us ensure everything works as it should.

Sellafield Ltd has worked with Nuvia Ltd and Delta International; who have brought specialist demolition expertise and innovative ideas to the project.

This work saw Nuvia win the Technology Innovation Implementation award at the 2017 NDA Estate Supply Chain Awards.

A self-climbing platform has been designed, engineered and installed to act as a podium so that workers can safely access the 650 tonne chimney.

Using hand held tools like drills, hydraulic breakers, concrete crunching jaws and plasma steel cutting torches, workers will remove each piece of concrete and steel from the stack by hand to a waiting waste skip.

The demolition started in October, with workers accessing it from the circular platform, which is held in place by friction, and moves up and down the barrel of the stack.

Mina Golshan, Director of ONR's Sellafield, Decommissioning, Fuel and Waste Division, said: "Starting demolition of this redundant stack is a key achievement by Sellafield and another important step towards reducing the risk and hazard posed by legacy facilities on site in order to further enhance safety. This is the focus of our regulatory strategy for the site.

"Our inspectors have engaged with Sellafield Ltd during the design, build, testing and commissioning phases and gathered evidence that assured us of the suitability of the proposed demolition activity and Sellafield's supporting safety case."

[Press release: M5 Oldbury viaduct team gives gardeners a helping hand](#)

A team working on the M5 Oldbury viaduct repair scheme is helping to transform a former derelict site into a community garden so it can be used by local charity, Ideal for all.

The derelict land, near junctions 1 and 2 of the M5 at Oldbury, is part of a programme of projects to give something back to local communities where work is currently being carried out by contractors BMV on behalf of Highways England to repair the viaduct.

Highways England is working with Ideal for All, a registered charity run by disabled people for disabled people in the Black Country, to create a fully functioning therapeutic garden and community learning space at Barlow Road in Wednesbury.

Ideal for All, through its award winning Growing Opportunities project, has already successfully developed two existing gardens; Salop Drive Market Garden (Oldbury) and therapeutic unit Malthouse Gardens (Smethwick). They are now working alongside the local community, M5 Oldbury viaduct team and Power to Change Community Business Fund to expand the project into Wednesbury (Barlow Road).

The site has already undergone phase one and one of development, being initially overgrown and unused for many years. Since the start of the Oldbury viaduct scheme, the team are carrying out further phase three development works and clearance across the Barlow road site.

In July, workers from contractors BMV attended the Ideal for All 'volunteer day'. This involved working alongside local volunteers and project participants, weeding and hedge trimming around the existing orchard. More recently the team has been back on site carrying out some rotovating and larger scale orchard clearance work.

Highways England senior project manager, Zbigniew Twarowski, said:

We appreciate the impact that M5 Oldbury viaduct project currently has on the local community.

We are always looking to minimise the disruption, but we know that there is a limit to what we can do. We are therefore looking to create a lasting legacy for the project. We will return a refurbished viaduct but we also want to support communities and improve lives.

Ideal for All's CEO, Khatija Patel, said:

We are excited to be working with local people, businesses and Power to Change. Together we're working hard towards the final transformation into a full functioning local asset, complete with community gardens, accessible buildings and community spaces.

The project will provide health, mental health and wellbeing opportunities alongside employment and skills training; benefiting local people, protecting the natural environment and creating opportunities to support and sustain economic regeneration of the area.

Seeing the project develop through the generous support from the Oldbury viaduct scheme has been fantastic and we cannot thank you all enough!

Ideal for All provides a range of social and health care services for disabled people, carers and disadvantaged groups.

The aim is to help people to learn new skills and live as independently as possible, regardless of background or additional needs. The charity offers a range of services to promote independent living, health and wellbeing and employment and skills and brings people together through peer support and social events.

General enquiries
