

# Press release: Valentine's Day of action against illegal waste activity

Environment Agency enforcement officers, on the 14 February, paid unannounced visits to 14 sites across Oxfordshire, Buckinghamshire, Surrey, Hampshire and West Berkshire in a bid to stamp out waste crime and protect the environment from the threat of pollution.

Named Operation Arrow, officers targeted sites suspected of operating in the waste business without the required environmental permits, flouting the law and committing crime.

Waste that ends up at unregulated sites is often stockpiled in vast quantities and for long periods of time. The waste can pose a significant risks to the environment, blighting communities with smoke fumes and causing noise and odour complaints. Illegal waste operators also undermine the work of legitimate waste companies, creating an unfair playing field for business.

Helen Page, Enforcement Team Leader at the Environment Agency said:

We want to make sure the right waste goes to the right place – to protect the environment and local communities. Site visits on our days of action are just one of the ways we are tackling waste crime to help make sure this happens.

We are really pleased with what we achieved. Of the 14 sites visited, 5 were found to be operating illegally. The information we have gathered is helping us target our work at those involved in organised environmental crime and where their activities pose the greatest risk to the environment.

Everyone can do their bit to reduce waste crime by making sure that any waste for disposal is collected by a licensed waste carrier and taken to a properly permitted, legitimate waste site.

To check if someone is registered please visit [environment.data.gov.uk/public-register/view/search-waste-carriers-brokers](https://environment.data.gov.uk/public-register/view/search-waste-carriers-brokers).

For all media enquiries please phone 0800 141 2743, or email us at [southeastpressoffice1@environment-agency.gov.uk](mailto:southeastpressoffice1@environment-agency.gov.uk)

# Press release: Information – The King of Modern War!

Stalin was wrong! Artillery is no longer the King of War. Information technology has transformed the modern battlefield at sea, in the air and on land, and it is arguably the new King of War. In April the Defence Science and Technology Laboratory (Dstl) will help to demonstrate this as part of the Royal Navy led Information Warrior exercise.

Information Warrior builds on the impressive success of last year's Unmanned Warrior exercise. It focuses on how information can be used offensively and defensively to give the UK's armed forces a battle winning advantage.

As part of the Royal Navy's Project X programme, Dstl is working on smaller, more agile and user-friendly secure communications. This will enable new concepts of operations by delivering greater situational awareness. The Royal Marines will put this system to the test during the exercise to ensure that it allows their command to communicate effectively with troops on the ground.

Dstl's Open Architecture Combat System (OACS) is another enabling technology, making it much easier for new applications – developed by a wide range of providers – to be integrated into ships' combat systems. OACS underpinned the success of Unmanned Warrior 16, and will be used during Information Warrior to allow artificial intelligence applications such as STARTLE to be deployed.

Artificial intelligence (AI) is a major theme of Information Warrior. One of the first potential applications of AI is STARTLE. This uses AI-based reasoning to help operators analyse air movements to identify potential threats in seconds. Other Dstl projects will apply AI and Big Data to enhance the analysis of imagery from Unmanned Aerial Vehicles to assess potential landing sites and routes to support landing forces.

Cyber resilience is another major theme. Dstl's technical experts are supporting the RN to ensure that its forces are secure and resilient to cyber threats, in accordance with the national cyber security strategy. Consequently, Information Warrior will exercise the Royal Navy's ability to defend itself against cyber threats, as well as conventional threats, ensuring that our cyber defences and skills remain state of the art in this rapidly evolving area.

Better information exploitation (IX) is another priority for Information Warrior. Dstl's support in this area includes the Adaptive Tactical Information eXploitation (ATIX) and Every Platform A Sensor (EPAS) projects. ATIX uses all the available data sources, applying data analytics, machine learning and statistics to improve the commanders' understanding of complex situations. This enables them to make more effective decisions. Currently much of the data gathered by sensors is not used. EPAS will address this by extracting useful information on events, such as ship tracks, from every available source. This builds a comprehensive store of data that can be

analysed in real time, or at a later date.

Discussing Information Warrior, Dstl's Chief Executive, Jonathan Lyle, said:

"Information has transformed the face of conflict. Dstl is excited to be part of the Royal Navy's Information Warrior exercise – in which our scientists will be demonstrating and testing some of the latest innovations in cyber, information systems, Big Data and artificial intelligence research."

Regular updates on the progress of the Information Warrior exercise can be found on the Royal Navy's [website](#).

## [Press release: Labour Market Statistics](#)

From:

First published:

15 February 2017

Part of:

James Brokenshire has today welcomed the latest Labour Market Statistics, which show continued stability for the Northern Ireland economy.

Secretary of State for Northern Ireland, Rt Hon James Brokenshire MP said:

I welcome today's Labour Market Statistics which demonstrate continued stability in the Northern Ireland economy. The number of people in work has increased, the unemployment rate is at an eight-year low and the number of people claiming unemployment-related benefits has fallen by 1,000 in January alone – the tenth consecutive monthly decrease.

As the UK leaves the EU and forges a new role in the world, this Government is determined to continue building a stronger economy and a Northern Ireland that works for everyone.

# News story: NATO must improve agility and spend, Defence Secretary urges

Sir Michael Fallon is pressing NATO members to step up defence spending during a two-day defence ministerial at NATO's HQ in Brussels, following his first meeting with US Defense Secretary James Mattis.

Reflecting the strength of the UK-US Defence relationship, Sir Michael was the first minister Secretary Mattis called after his appointment and their hour-long meeting at NATO's HQ was the first bilateral working session today.

During their recent phone call, shortly after Secretary Mattis' confirmation, both ministers agreed on the need for NATO to be more agile and responsive so it can respond faster to new threats including cyber and terrorism.

In July NATO confirmed that the UK meets the two per cent spending target, which includes a £178bn equipment plan and rising defence spending every year of this parliament.

The Defence Secretary spoke to fellow ministers to call for other states to spend both 2% overall and to spend 20% of that on new equipment to help tackle threats.

In his face-to-face meetings with Secretary Mattis Sir Michael reassured him that the UK stands shoulder to shoulder with the US in calling for NATO to be more agile to meet new threats in the fields of cyber warfare and counter terrorism.

Defence Secretary Sir Michael Fallon said:

NATO has been a guarantee of mutual security for more than half a century. Britain is now calling for our partners to step up and share burdens on spending and help it become more agile in dealing with new threats including cyber and terrorism.

As leading player in the Alliance we recognise the importance of backing up our operational and exercise commitments with investment in new equipment to deal with threats to our security.

Sir Michael is discussing the UK's leadership in NATO. The UK's Enhanced Forward Presence deployment to Estonia is gathering momentum, seen this week in a 600-strong exercise in Sennelager in Germany which features British personnel from the Battle Group for 5 RIFLES. Hundreds of British troops including 5 RIFLES personnel from Salisbury Plain in Wiltshire have spent the last week exercising with four Challenger II tanks, Warrior Armoured Fighting Vehicles and Jackals – alongside Estonian, French and Danish troops.

The deployment of 800 British personnel to Estonia under EFP is part of a

package of measures that the UK is leading in NATO this year. These include leading the land element of NATO's Very High Readiness Joint Task Force with 3,000 British troops ready to deploy rapidly to threats wherever they arise in the Alliance, and committing RAF Typhoon aircraft to the NATO Southern Air Policing mission to offer reassurance to in the Black Sea region.

Over the two-day ministerial, defence leaders will discuss issues such as protecting NATO's southern border, developing NATO's deterrence and defence posture, and strengthening the transatlantic bond.

## **[Press release: Compound Semiconductor Applications Catapult: Chair appointed](#)**

Kevin Crofton joins the [Compound Semiconductor Applications Catapult](#) with a 25-year career in the semiconductor industry. He has executive experience in the UK and USA, currently acting as President of SPTS Technologies in South Wales, and Corporate Vice President of Orbotech Inc.

His experience and insight will be invaluable in establishing the Catapult within the rapidly growing compound semiconductor cluster in South Wales.

It is the 11th Catapult to be opened by Innovate UK.

### **The market opportunity for the UK**

Compound semiconductors are at the heart of many devices we use today, from smart phones to tablets and satellite communication systems. They are central to the development of new technologies including:

- 5G network
- high-efficiency lighting
- power electronics for next-generation electric vehicles
- new imaging techniques in security and health diagnostics

Data from the [BCC Research and MarketsAndMarkets](#) forecasts the global market for compound semiconductors to be in the range of £75 billion to £125 billion by 2025. There is a market opportunity for the UK due to its world-class research base in this field, which has led to the creation of many companies along the value chain.

### **Maximising business and research opportunities**

Minister of State for Universities, Science, Research and Innovation, Jo Johnson said:

The government's investment in the Compound Semiconductor Application Catapult is testament to our track record as a leader in advanced electronics – a strength that we will build on through our Industrial Strategy to ensure that the UK remains at the forefront of innovation.

The appointment of Kevin Crofton as Chair and his wealth of industry experience will help drive this and continue the Catapult's vital role in developing new technologies.

Secretary of State for Wales, Alun Cairns said:

Much of the advance technology powering our mobile phones and other devices is being pioneered right here in Wales. The new research centre will underline our reputation as a world leader in semiconductors and, with Kevin Crofton at the head, put us in the front row of digital development.

Innovations like the Catapult will lead to the creation of more high skilled and high paid jobs in Wales.

Innovate UK Chief Executive Ruth McKernan said:

Kevin's experience and expertise will spearhead the development of the new Catapult, and ensure we are maximising the business opportunities from the important compound semiconductors market.

Kevin Crofton added:

I look forward to helping to guide the Catapult's vital contribution to the compound semiconductor industry in the UK.

We expect the Catapult to bridge some of the primary research, development and test challenges that exist in the UK compound semiconductor sector. This should help to accelerate innovation among existing businesses and to aid spin-out companies in their success.
