

# British Embassy Tokyo joins Remembrance Day Commemorations 2022

World news story

The Tokyo District Remembrance Day Ceremony will be held on Sunday 13th November 2022.

The location will be the Commonwealth War Cemetery, Hodogaya, commencing around 10:40am. The ceremony will be a multi-denominational service held on the main grounds in front of the British Cross of Sacrifice.

Commonwealth civic organisations, Veteran and POW societies as well as the Embassies and Armed forces of Commonwealth Nations will be represented. Members of the public are welcome to attend.

If you are not able to attend the Ceremony but would like to remember this important occasion in your own way, you can make use of the Royal British Legion resources and suggestions at <https://www.britishlegion.org.uk/get-involved/remembrance>. The Department for Veterans Affairs of the Australian Government also has very useful resources at <https://anzacportal.dva.gov.au/resources/remembrance-day-kitbag>.

Further information below on travel to the Commonwealth War Cemetery

- Parking is not available within Hodogaya Cemetery except for Religious Officials and event organisers
- Visitors with mobility issues will be permitted to park within the cemetery – please ask on arrival
- Visitors are encouraged to use public transport (Bus route 53 from Hodogaya station to Nagatadai Kouenmae)
- Local Police have asked that visitors do not park on roads as this distresses the local residents
- Public Car park near the cemetery will be used for official visitors
- A taxi from Hodogaya Station should take 9 minutes and cost approximately 1,000 yen

## [UK's first large-scale merchant lithium refinery announced](#)

### News story

Business Secretary Grant Shapps is visiting Teesside to announce the UK's first large-scale merchant lithium refinery, providing battery grade materials for use in the electric vehicle, renewable energy and consumer technology supply chains.

Today the Business Secretary Grant Shapps is visiting Teesside to announce the UK's first large-scale merchant lithium refinery, providing battery grade materials for use in the electric vehicle, renewable energy and consumer technology supply chains.

In a boost for Levelling Up and government plans to make the UK the best place in the world to do business, Green Lithium has unveiled Teesport in Middlesbrough as the site for their forthcoming lithium refinery, delivering more than 1,000 jobs in construction and 250 long-term high-skill jobs for local people once up and running. 89% of the world's lithium processing currently takes place in East Asia and there are currently no lithium refineries in Europe. Green Lithium aims for this to be the first merchant lithium refinery outside of Asia.

The UK Government has backed Green Lithium with a grant of over £600,000 through the Automotive Transformation Fund.

Lithium is an essential component of batteries and a secure supply will be critical for our automotive and energy industries. Critical minerals are irreplaceable in products essential to our everyday lives – such as mobile phones, wind turbines and fighter jets.

Critical minerals are at high risk of supply disruption, because of volatile markets and complex supply chains. The world in 2040 is projected to need four times more critical minerals than it does today.

Business Secretary Grant Shapps said:

We're backing companies, like Green Lithium here in Teesside, to grow the new, green industries across the UK, sparking jobs and growth for decades to come.

This is levelling up in action. The refinery will deliver more than 1,000 jobs during its construction and 250 long-term, high-skill jobs for local people when in operation.

It is also allowing us to move quickly to secure our supply chains of critical minerals, as we know that geopolitical threats and global events beyond our control can severely impact the supply of key components that could delay the rollout of electric vehicles in the UK.

## [UK strengthens Taiwan trade ties as Minister visits Taipei](#)

- Trade Policy Minister Greg Hands heads to Taiwan for first in-person trade talks since pandemic
- During a two-day visit, he will meet President Tsai Ing-wen and co-host the 25th annual UK-Taiwan Trade Talks
- The Minister will use talks to tackle barriers to trade and promote UK expertise in areas like offshore wind and hydrogen

Trade Minister Greg Hands will co-host the UK-Taiwan 25th annual Trade Talks in Taipei to boost trade and future-proof our economy through collaboration on green trade and supply chains.

With its advanced, high-tech economy, a GDP of over \$770 billion, and strong economic growth – averaging 4% over the last 30 years – Taiwan is an important trading partner for the UK.

Visiting Taiwan in person is a clear signal of the UK's commitment to boosting UK-Taiwan trade ties. Like the UK, Taiwan is a champion of free and fair trade underpinned by a rules-based global trading system.

The talks with Minister Chern-Chyi Chen will look at tackling barriers to trade in sectors like fintech, food and drink and pharma, aimed at helping more UK firms export and invest in Taiwan. The Minister will also promote UK expertise in offshore wind, hydrogen and electric vehicles in discussions on areas of mutual interest such as renewables and science and innovation.

Minister of State for Trade Policy Greg Hands said:

“I first visited Taiwan 31 years ago in 1991 and it’s been fantastic to see the growth of this dynamic, vibrant economy. I’m thrilled to be the first Trade Minister here post-pandemic and to be celebrating the 25th anniversary of trade talks.

“Boosting trade with this vital partner is part of the UK’s post-Brexit tilt towards the Indo-Pacific and closer collaboration will help us future-proof our economy in the decades to come.”

Our thriving £8bn trade partnership has gone up 14% in the last two years, with UK exports to Taiwan also increasing in that time. The Government’s most recent annual business survey showed the overwhelming majority of UK companies operating in Taiwan are optimistic about its economy and prospects.

During the Trade Talks, Innovate UK will sign a Memorandum of Understanding (MoU) with the Ministry of Economic Affairs in Taiwan, pledging to increase collaboration on technology and innovation. This includes a £5m funding commitment through to 2025 and support to UK businesses via a bespoke Innovation Programme in Taiwan.

As a leading manufacturer of semiconductors – the chips used in electronic devices like iPhones and electric vehicles – Taiwan is a key player in global supply chains. The Minister will use meetings with President Tsai Ing-wen, Vice Premier Shen Jong-chin, Minister of Economic Affairs Wang Mei-Hua, Minister of Digital Affairs Audrey Tang, Minister Kung Ming-Hsin and Minister John Deng – to promote diversified, resilient supply chains and greater economic cooperation.

Thanks to the UK’s unmatched offshore wind experience and expertise, the UK is already a major partner in Taiwan’s green transition, with more than 38 British companies already having set up offices in Taiwan. The Minister will visit the Formosa 2 offshore wind site – the first international offshore wind project supported by UK Export Finance – which more than 10 British companies are involved in.

Luxfer Gas Cylinders, a British company based in Nottingham (UK), has just signed a contract to supply cylinders for Taiwan’s first pilot hydrogen bus project.

# Every report to MHRA's Yellow Card scheme helps improve the safety of medicines and medical devices for all

Launched today by the Medicines and Healthcare products Regulatory Agency (the MHRA), the seventh annual [#MedSafetyWeek](#) is running until 13 November to encourage widespread public engagement and improve patient safety by reporting suspected side effects associated with medicines and adverse incidents involving medical devices.

This year's campaign is a truly global effort and involves healthcare product regulators from no fewer than 82 countries. It focuses on the vital role played by every healthcare professional, patient, and carer who reports a suspected side effect or adverse incident, which in turn supports the safe use of medicines and medical devices.

All medicines may cause side effects and adverse incidents may occur during the use of medical devices, so it is important to have robust measures in place to continuously monitor their safety after they are taken into clinical use. The purpose of safety monitoring is to gain more information about known side effects and adverse incidents, to find out about new ones, and, most importantly, to make use of medicines and medical devices as safe as possible. Regulators operate systems to detect and analyse those side effects and adverse incidents and prevent harm to future patients.

It is important that everyone makes a report as soon as they suspect side effects and adverse incidents. This ensures that regulatory assessments are genuinely representative and can improve safety for as many people as possible.

The [Yellow Card scheme](#) is the MHRA's single system for collecting suspected side effects of medicines and adverse incidents involving medical devices. These side effects and adverse incidents are then collated and swiftly investigated by the MHRA. Since its establishment in 1964 the scheme has identified numerous safety issues to the benefit of many, thanks to individual reports from medicines users across the nation.

Everyone who reports suspected side effects and adverse incidents to the [Yellow Card scheme website or app](#), is actively participating in identifying emerging national safety issues, so that the MHRA can act when necessary and protect against harm.

**Phil Tregunno, MHRA Deputy Director of Patient Safety Monitoring, said:**

Every report made by a patient, a healthcare professional, or a carer plays a key role in gaining knowledge about the risks of medicines and medical devices in clinical use and allows rapid,

targeted action to be taken to minimise harm and ensure that the benefit-risk remains favourable.

Reporting suspected side effects and adverse incidents to the Yellow Card website is not just about the individual involved, it helps to improve the safety of medicines and medical devices for all patients. By reporting, you are part of the solution – and you may be helping to protect the most vulnerable, at-risk groups from potential harm.

If you, your child, or a patient in your care experiences a suspected side effect or adverse incident relating to a medicine or medical device, it is essential that you report it to us promptly. The faster you report, the likelier it is that we can intervene and prevent others from experiencing untoward, serious, life-altering, and occasionally life-threatening issues.

**Minister of State for Health and Secondary Care, Will Quince, said:**

Patient safety is at the heart of ensuring the best care, and this government takes it extremely seriously. I'm pleased to support this campaign which will help to further improve the safety of medicines in the UK.

I urge everyone from healthcare professionals to patients to continue to report any adverse effects involving medicines or medical devices through the Yellow Card scheme, so potential incidents can be investigated quickly.

Anyone can report suspected side effects and adverse incidents to the Yellow Card scheme. Reports can be submitted in several ways:

Healthcare professionals and providers can also use local clinical systems to make a report, such as MiDatabank, SystmOne, or VISION.

Reports related specifically to COVID-19, including suspected side effects caused by medicines, vaccines, and medical device and incidents when using coronavirus test kits should be made at [coronavirus-yellowcard.mhra.gov.uk](https://coronavirus-yellowcard.mhra.gov.uk)

**Notes to Editors**

- National medicines regulators from 82 countries across the globe and their stakeholders will be taking part in this international campaign led by Uppsala Monitoring Centre (UMC) – the World Health Organisation (WHO) Collaborating Centre for International Drug Monitoring. The campaign is supported by members of the International Coalition of Medicines Regulatory Authorities (ICMRA). The #MedSafetyWeek 2022 project team consists of representatives from the following organisations working collaboratively: the Medicines and Healthcare products Regulatory Agency (UK) as co-lead, the Health Products

Regulatory Authority (Ireland), the International Society of Pharmacovigilance (ISoP) Egypt Chapter, and the Colombian Pharmacovigilance Association.

- The Medicines and Healthcare products Regulatory Agency (MHRA) regulates medicines, medical devices and blood components for transfusion in the UK. MHRA is an executive agency, sponsored by the Department of Health and Social Care.
- Patients using the Yellow Card site should type the relevant medicine, vaccine, or medical device into the search bar and select 'Start report' on the right-hand side of the bar. The search bar also offers a drop-down menu to report for medicines, vaccines, medical devices, blood factors and immunoglobulin products, E-cigarettes, and herbal or homeopathic medicines that are not on the MHRA's list, as well as the option to send additional details of the suspected material(s) if the product type is unknown, so that the final report is accurate.
- For adverse incidents associated with a medical device, healthcare professionals should report through the Yellow Card scheme or their local clinical [reporting systems](#). Healthcare professionals in Northern Ireland and Scotland will need to report adverse incidents involving medical devices through the [Northern Ireland Adverse Incident Centre \(NIAIC\)](#) or [National Services Scotland](#).
- Patients are advised to contact a healthcare professional if they are worried about their health or the safety of any healthcare product they are receiving.

## [UK Representative, COP26 President, Alok Sharma's Ceremonial Opening Speech at COP27](#)

Distinguished delegates, ladies and gentlemen, it gives me great pleasure to declare open the twenty-seventh session of the Conference of the Parties to the United Nations Framework Convention on Climate Change.

Friends, let me begin by thanking our friends here in Egypt for such a warm welcome.

My team and I know just how demanding hosting such a conference is, and how many people have worked incredibly hard to get us to this point.

So congratulations, and thank you again.

Now as the UK Presidency comes to an end, I want to reflect on what we achieved together in Glasgow,

and also what has happened since in our Presidency year.

Last November, the world gathered at COP26 against a fractured and fractious geopolitics, as a once-in-a-century pandemic dragged mercilessly on.

And yet, leaders recognised that, despite their differences, often profound, cooperation on climate and nature is in our collective self-interest.

And thanks to that spirit of cooperation and compromise, we forged together the Glasgow Climate Pact.

Collectively we achieved something historic, and something hopeful.

With your help:

We closed the Paris Rulebook.

We made unprecedented progress on coal, and on fossil fuel subsidies.

We committed to rapidly scale up finance, and to double adaptation finance by 2025.

We reiterated the urgency of action and support for loss and damage, and established serious work on funding arrangements.

We hope that this will pave the way for a formal agenda item and tangible progress here in Egypt.

And every Party, and I repeat this, every Party agreed to revisit and strengthen their 2030 emissions reduction targets, to align with Paris.

I want to thank the 29 countries which have already updated their NDCs since Glasgow.

From Australia to Micronesia.

India to Vanuatu.

Norway to Gabon.

And we also made progress outside the negotiating rooms, with commitments from business, from finance, from philanthropy.

Friends, thanks to the work we did together, we achieved our objective, the goal at the heart of the Paris Agreement:

we kept 1.5 degrees alive.

Now, none of us could have anticipated the year that followed.

We have been buffeted by global headwinds that have tested our ability to make progress.

Putin's brutal and illegal war in Ukraine has precipitated multiple global crises: energy and food insecurity, inflationary pressures and spiralling debt.

These crises have compounded existing climate vulnerabilities, and the scarring effects of the pandemic.

And yet, despite this context, there has been some progress in implementing the commitments we delivered in Glasgow.

Over 90 percent of the global economy is now covered by a net zero target, up from less than 30 percent when the UK took on the COP26 role.

The biggest companies and financial institutions in the world have committed to net zero and they have done so in force,

with a global wall of capital creating green jobs, and directing billions into the green industries of both today and tomorrow.

Countries and companies are making tangible sectoral progress,

from Zero Emission Vehicles to our Breakthrough Agenda,

and are accelerating the rollout of renewable energy across the world.

The Secretary General has been clear: our shared long-term futures do not lie in fossil fuels and I agree with him wholeheartedly.

Every major report published this year underscores the point that progress is being made.

Thanks to the commitments we garnered ahead of and at COP26, and indeed in our Presidency year, emissions in 2030 are expected to be around six gigatons lower.

That is the equivalent of 12 percent of today's global annual emissions.

And with full implementation of all the commitments in place today, including NDCs and net zero targets, the reports suggest that we are heading to 1.7 degrees warming by the end of the century.

Not 1.5.

But still, progress.

So, to those who remain sceptical about the multilateral process, and of the COP process in particular, my message is clear:

as unwieldy and sometimes as frustrating as these processes can be, the system is delivering.

And there are many people to thank for that.

And certainly too many to name.

The Prime Ministers and Presidents who have sensed the changing wind, and indeed sought instead to harness it.

The Ministers to the miners who have recognised a just and sustainable future can only be delivered with a clean energy transition.

The civil society organisations, youth representatives and indigenous peoples who pushed us to consider and reconsider what was possible in Glasgow, have continued to do so since.

And, of course, the brilliant officials, the brilliant civil servants around the world, not least in the UK's COP Unit, who have helped to deliver progress.

And yet, despite this progress, I fully recognise the scale of the challenge still in front of us.

Just as every report shows that we are making some progress, they are equally clear that there is so much more to be done in this critical decade.

Friends, we are not currently on a pathway that keeps 1.5 in reach.

And whilst I do understand that leaders around the world have faced competing priorities this year,

we must be clear,

as challenging as our current moment is, inaction is myopic, and can only defer climate catastrophe.

We must find the ability to focus on more than one thing at once.

How many more wake-up calls do world leaders actually need?

A third of Pakistan under water.

The worst flooding in Nigeria in a decade.

This year, the worst drought in 500 years in Europe, in a thousand years in the US, and the worst on record in China.

The cascading risks are also clear.

Entire economic sectors becoming unsustainable and uninsurable,

entire regions becoming unlivable,

and the strain on the global movement of goods,

and the pressure on people to relocate because of the climate crisis, becoming almost unimaginable.

So, this conference must be about concrete action.

And I hope that when the world leaders join us today, they will explain what their countries have achieved in the last year, and how they will go further.

It is very simply, a matter of trust.

Without its constituent members delivering on their commitments, and agreeing to go further, the entire system falters.

I will do everything in my power to support our Egyptian friends.

The UK is here to reach ambitious outcomes across the agenda, including on mitigation, on adaptation, and on loss and damage.

And we know that we have reached a point where finance makes or breaks the programme of work that we have ahead of us.

So whilst I would point to some of the progress shown on the \$100 billion,

I hear the criticisms, and I agree that more must be done, by governments and by the Multilateral Development Banks,

including on doubling adaptation finance by 2025, and establishing a post-2025 goal.

Ultimately though, I remain hopeful.

Look back to where we were before Glasgow.

Look back to where we were before Paris.

Indeed, as we mark the thirtieth anniversary, look back to where we were before Rio.

With thanks to all of you, the UK's Presidency ends as a demonstration that progress is possible, is happening and is continuing.

Yes, we need to accelerate that progress in the remainder of this decisive decade.

But I believe fundamentally that we can.

We know what we need to do to keep 1.5 degrees alive.

We know how to do it.

And Sameh, you and your team have our full support.

So now friends, let's make sure we delivery, let's make it happen.

Thank you.
