

Making farms safer places to work and live

Deaths or injuries on farms happen much more often than they should. Farmers are asked to think safety before starting any job to help make farms safer places to work and live.

Preventing accidents

From quad bike accidents to animal attacks, farming kills and injures more people than any other industry in the UK and Ireland.

Tragically, most accidents are caused by simple factors such as habit, haste, fatigue, and improperly-maintained machinery.

Many farmers think 'farm safety last' rather than 'farm safety first' but most farming accidents are avoidable.

Safety must never be an afterthought. By taking just a few minutes to think about the job ahead, preventable accidents can be easily avoided by using simple safety practices.

Machinery

Poorly used or faulty machinery is a major cause of death and injury on farms.

Farmers come into contact with a host of machinery daily such as tractors, combines, choppers and hay balers which can bring dangers.

People can be injured by front-end loaders, falling from a moving tractor, or being struck by its wheels.

Also, hands, hair and clothing can be caught by unguarded PTO shafts or other unguarded moving parts such as pulleys and belts.

The following should help you and others to stay safe on your farm:

- keep all guards in place on tractors and equipment, especially PTO guards
- make sure that all mirrors and cameras (if fitted) are clean and fully functional on tractors and telescopic handlers
- make sure equipment is stopped fully before clearing blockages
- operate tractors with enclosed safety cabs or roll bars
- take care when mounting or dismounting tractors or telescopic handlers
- keep the brakes on all your machines properly maintained, especially the parking brakes
- only start your tractor from the driver's seat

- make sure that your tractors starter system works properly
- when pulling heavy machinery equipped with hydraulic brakes, make sure the brakes are connected to the tractor and work properly

You should:

- never try to repair machinery if you do not have the correct tools and equipment, and are not competent to do so
- never run a tractor down a slope to start it
- never work near overhead power lines when tipping trailers or using high reaching machinery
- never check hydraulic pipes for leaks by running your finger or hand along them while they are connected and under pressure

Farmers are encouraged to take the appropriate steps before doing any repair work on machinery.

The correct equipment must always be used for the job; this includes wheel chocks and a trolley jack or suitable props. Farmers should also consider employing a competent mechanic to carry out repairs.

Animals

Many farmers never stop to consider why animals behave as they do and, more importantly, what this behaviour could mean to their personal safety.

Livestock can be unpredictable, something that even the most experienced farmer can't completely plan for.

Handling livestock always involves a risk of injury, and this is increased when an animal becomes frightened or has been startled.

Animals will fiercely defend their food, shelter, territory and young. When frightened or in pain, animals may react in ways that threaten your safety as well as their own.

Although most animal incidents are not fatal, many men, women and children are needlessly injured every year due to a lack of safety awareness.

It's important to stress that safe handling equipment is a must, not a luxury.

Falls

Farming carries an above-average risk of falling accidents. Any fall from height can lead to long-term injuries or sadly even death.

Most accidents of this type happen either because the work is not properly planned, the risks are not recognised, proper precautions are not taken, or the equipment used is either defective, not appropriate, or used incorrectly.

While working at heights is always a risky business, there are several things

which can be done to reduce those risks. The following checklist can help prevent falls from heights:

- have you thought about the best way to get up to the job?
- can you use a cherry-picker or a materials handler (including a fork lift)?
- do you have a suitable cage or platform attached to the machine?
- have you done everything you can to avoid using a ladder?
- is the ladder in good condition, rungs and stiles sound?
- is it long enough, reaches to at least 0.9m above the stepping off point?
- can it be tied or footed?
- is the roof material fragile, for example asbestos cement sheet?
- have you got crawling boards or staging to cover the asbestos cement by bridging the joists?
- can you avoid stepping on the roof-lights?

Remember: you can either fall off or through the roof of a farm building.

More farm safety information

You can find out more about farm safety on the links below:

Always take your time to think about what you are doing, as making a few simple checks could actually save a life – maybe your own.

[Avoiding getting caught out by scams](#)

It's Scams Awareness Month and people are being warned to beware of being caught out by fraudsters. There are countless ways that criminals have found to scam people out of their money, but there are steps to take to be wiser about scams.

Do some research

New technology has made scamming a fine art. Telephones, smartphones, computers, and tablets has inspired a new generation of scammers from home and abroad.

People need to be much more careful. Just as the internet is used to search for products and services, people should use the internet to:

- research the seller or provider
- check reviews and scam alerts from those who have already been caught

out

It is one of the easiest ways of protecting yourself.

Scams and what to do

Each month Trading Standards Service's [Consumerline](#) receives hundreds of complaints, many from people who have been scammed from a few pounds to many thousands of pounds.

For example:

- phone calls catch the unwary who are frequently too quick to agree business over the phone
- instead of being given money, some consumers have lost hundreds of pounds applying for loans
- fake websites supposedly selling cars and even outboard motors have caught local consumers out in recent weeks

Lots of people also fall for 'free trials' of various lotions and potions. Thinking they have paid only a few pounds for post and packaging, they discover that they have had sometimes hundreds of pounds withdrawn from their account under a Continuous Payment Authority. In many cases, goods are simply never delivered.

Anyone who feels that they have been a victim of a scam should [contact Consumerline](#).

Report a scam

Many people who are scammed feel they are to blame to falling for it, but it's not their fault.

If you have – or know someone who has – been a victim of fraud, no matter how small, you should report it to the [PSNI](#) or [Action Fraud](#).

Remember, if it seems too good to be true, it probably is.

[**Physical activity advice for pregnant**](#)

women

If you are pregnant, there is new advice about the types of physical activity that are safe to do while you're expecting. Taking part in safe, responsible and appropriate physical activity while pregnant can have many health benefits.

Addressing health concerns

The new recommendations aim to address concerns around obesity, diabetes and other health issues during pregnancy.

Research shows that taking regular physical exercise during pregnancy can:

- boost the immune system
- help prevent health risks such as Type 2 diabetes
- improve mental health and wellbeing

If you are pregnant you should listen to your body and adapt your exercise accordingly.

As a general rule, if it feels pleasant, keep going; if it is uncomfortable, then stop and seek advice from your health professional.

If you are already active then try to keep up your physical activity levels.

You may need to adapt your activity throughout your pregnancy. For example, replacing contact sports with a non-contact sport or an appropriate exercise class – 'don't bump the bump'.

There is no evidence of harm for expectant mother or baby resulting from moderate intensity physical activity.

If you weren't active before pregnancy, it is recommended you slowly increase the amount of exercise you do. Begin with 10-minute bouts of moderate-intensity exercise, gradually building up to 150 minutes in total spread throughout the week. It is important to remember that 'every activity counts'.

If you were not active before your pregnancy you should avoid intense exercise, such as:

- running
- jogging
- racquet sports
- strenuous strength training

Activities to avoid

If pregnant you should avoid activities where there is an increased risk of

falling, trauma or high impact injuries. These include:

- skiing
- water skiing
- surfing
- off-road cycling
- gymnastics
- horse riding
- contact sports, such as ice hockey, boxing, football or basketball

After the first trimester of your pregnancy you are also discouraged from exercise that requires lying flat on your back.

Medical advice

You should seek medical advice if you experience:

- breathlessness before or following mild exercise
- headaches
- dizziness
- chest pain
- muscle weakness affecting balance
- calf pain or swelling

If you experience pregnancy complications such as vaginal bleeding, regular painful contractions, or amniotic fluid leakage, you may also be advised to reduce or stop physical activity.

[Speak to your family about organ donation](#)

Everyone is being encouraged to sit down with their loved ones and talk about their organ donation wishes. A family will always have to agree to donation, whether or not their loved one is on the Organ Donor Register. You can sign up to the register online.

Organ Donor Register

The organ donation system in Northern Ireland is based on opting in to being a donor, and donors' families giving consent for their organs to be used.

Some families do not consent to the donation of their loved one's organs, when faced with this choice. A common reason for refusing is that the potential donor's family was not aware of their loved one's wishes. So everyone is encouraged to make their organ donation intentions clear.

When you sign up to the Organ Donor Register you will be able to register to:

- be a donor
- not be a donor
- record the details of up to two representatives, if you feel you would want someone to make that decision for you after death

How to register

By signing the register and talking to your family about your wishes, you could help save the lives of up to seven people. Organ donation really is the gift of life.

You can find out more, including how to join the register, on the page below:

Age isn't a barrier to being an organ or tissue donor, and neither are most medical conditions.

People in their 50s and over are encouraged to join, and people in their 70s and 80s have become donors and saved many lives.

[Jury notice form of return online](#)

Members of the public will be receiving jury notices in the post. If you get one, you must fill in the Form of Return. You can do this online.

Jury service

Each year people are randomly selected from the Electoral Register to potentially be called for jury service.

If you [get a jury notice](#), this means that you may be called for jury service at any time during a 12-month period from the beginning of July 2019 until the end of June 2020.

You must fill in a Form of Return within 14 days of receiving your jury notice. The most straightforward way to do this online at the following link:

If you fail to make a return within 14 days, or make a false statement, you

will be liable on conviction of a Magistrates' Court to a fine of up to £1,000.

You should fully read the documents attached to the notice.

Jury summons

If you are selected at random for jury service, you will receive a jury summons.

This will have further information, including where and when you are required to attend to meet your legal obligations as a juror.

The jury summons will give you at least 10 days' notice to enable you to make arrangements to attend. However, longer notice will try to be given where possible.

You can find more information in the [jury service](#) section.
