#### Further information

The unemployment and underemployment statistics were compiled from the findings of the continuous General Household Survey.

In the survey, the definitions used in measuring unemployment and underemployment follow closely those recommended by the International Labour Organization. The employed population covers all employers, self-employed persons, employees (including full-time, part-time, casual workers, etc.) and unpaid family workers. Unemployed persons by industry (or occupation) are classified according to their previous industry (or occupation).

The survey for February – April 2024 covered a sample of some 26 000 households or 69 000 persons, selected in accordance with a scientifically designed sampling scheme to represent the population of Hong Kong. Labour force statistics compiled from this sample represented the situation in the moving three-month period of February to April 2024.

Data on labour force characteristics were obtained from the survey by interviewing each member aged 15 or over in the sampled households.
