

Update on cluster of Candida auris cases in Kowloon Hospital

The following is issued on behalf of the Hospital Authority:

Regarding an earlier announcement on Candida auris carrier cases, the spokesperson for Kowloon Hospital gave the following update today (April 13):

Following a contact tracing investigation, one more female patient, aged 90, in the rehabilitation ward was identified as a carrier of Candida auris without signs of infection. The patient is now being treated under isolation and is in a stable condition.

The hospital will continue the contact tracing investigation in accordance with the prevailing guidelines. A series of enhanced infection control measures have already been adopted to prevent the spread of Candida auris:

1. Thorough cleaning and disinfection of the ward concerned;
2. Enhanced admission screening for patients and environmental screening procedures; and
3. Application of stringent contact precautions and enhanced hand hygiene for staff and patients.

The hospital will continue to closely monitor the situation of the patient. The case has been reported to the Hospital Authority Head Office and the Centre for Health Protection for necessary follow-up.
