

World news story: UK at COP23 in Bonn

Updated: Programme update

The UK will host a pavilion in the Bonn Zone of COP. Through our programme of talks, events and presentations we aim to showcase the UK's role in tackling climate change, sharing innovations that will drive the future of the Paris Agreement. We hope that sharing our experiences and expertise can be useful for other countries in taking forward action on their climate commitments, and are keen to explore areas for collaboration in the future.

Our programme will cover a broad range of topics across the climate and clean growth agenda, UK renewable energy, green finance, climate policy (including the Clean Growth Strategy), transport and more.

The UK is playing a leading role in the low carbon transition both nationally and internationally. We were the first country to legislate to reduce carbon emissions with the 2008 Climate Change Act, and have been among the most successful countries in the developed world in growing our economy while reducing emissions. Since 1990, the UK has cut emissions by 42 per cent while our economy has grown by 67%. Our recently launched Clean Growth Strategy builds on this, bringing together for the first time over £2.5 billion of Government funding for low carbon innovation from 2015 to 2021.

Please come and join us at COP 23 in Bonn.

The programme of the pavilion can be viewed below for week 1 and week 2.
